E. Scope of this Methodology and Intended Scope of Assessments .............. 15
F. The Assessment Process and Assessment Measures ................................... 15

## II PRINCIPLE-BY-PRINCIPLE ANALYSIS ........................................... 20

A. Principles Relating to the Regulator ............................................................ 20
   1. Preamble ............................................................................................. 20
   2. Scope .................................................................................................. 21
   3. Principles 1 through 8 ......................................................................... 22
B. Principle Relating to Self-Regulation .......................................................... 53
   1. Preamble ............................................................................................. 53
   2. Scope .................................................................................................. 53

---

1 Book II is a compilation of Annexes relating to the conduct of assessments prepared for IOSCO members. Book II is not publicly available on the IOSCO website.
3. Principle 9 ............................................................................................................................ 55

C. Principles Relating to Enforcement .................................................................................. 63
   1. Preamble .......................................................................................................................... 63
   2. Scope ................................................................................................................................ 64
   3. Principles 10 through 12 ............................................................................................... 65

D. Principles Relating to Cooperation .................................................................................. 80
   1. Preamble .......................................................................................................................... 80
   2. Scope ................................................................................................................................ 81
   3. Principles 13 through 15 ............................................................................................... 82

E. Principles Relating to Issuers ......................................................................................... 100
   1. Preamble .......................................................................................................................... 100
   2. Scope ................................................................................................................................ 100
   3. Principles 16 through 18 ............................................................................................... 104

F. Principles for Auditors, Credit Rating Agencies, and Other Information
   Service Providers .................................................................................................................... 127
   1. Preamble .......................................................................................................................... 127
   2. Scope ................................................................................................................................ 128
   3. Principles 19 through 23 ............................................................................................... 129

G. Principles Relating to Collective Investment Schemes and Hedge Funds. 150
   1. Preamble .......................................................................................................................... 150
   2. Scope ................................................................................................................................ 151
   3. Principles 24 through 28 ............................................................................................... 155

H. Principles Relating to Market Intermediaries ................................................................. 191
   1. Preamble .......................................................................................................................... 191
   2. Scope ................................................................................................................................ 192
   3. Principles 29 through 32 ............................................................................................... 194

I. Principles Relating to Secondary and Other Markets ..................................................... 221
   1. Preamble .......................................................................................................................... 221
   2. Scope ................................................................................................................................ 223
   3. Principles 33 through 37 ............................................................................................... 224

J. Principle Relating to Clearing and Settlement ............................................................... 266

Appendix 1 – The Legal Framework ..................................................................................... 269
**LIST OF PRINCIPLES**

**A. PRINCIPLES RELATING TO THE REGULATOR**

1. The responsibilities of the Regulator should be clear and objectively stated.
2. The Regulator should be operationally independent and accountable in the exercise of its functions and powers.
3. The Regulator should have adequate powers, proper resources and the capacity to perform its functions and exercise its powers.
4. The Regulator should adopt clear and consistent regulatory processes.
5. The staff of the Regulator should observe the highest professional standards, including appropriate standards of confidentiality.
6. The Regulator should have or contribute to a process to identify, monitor, mitigate and manage systemic risk, appropriate to its mandate.
7. The Regulator should have or contribute to a process to review the perimeter of regulation regularly.
8. The Regulator should seek to ensure that conflicts of interest and misalignment of incentives are avoided, eliminated, disclosed or otherwise managed.

**B. PRINCIPLES FOR SELF-REGULATION**

9. Where the regulatory system makes use of Self-Regulatory Organizations (SROs) that exercise some direct oversight responsibility for their respective areas of competence, such SROs should be subject to the oversight of the Regulator and should observe standards of fairness and confidentiality when exercising powers and delegated responsibilities.

**C. PRINCIPLES FOR THE ENFORCEMENT OF SECURITIES REGULATION**

10. The Regulator should have comprehensive inspection, investigation and surveillance powers.
11. The Regulator should have comprehensive enforcement powers.
12. The regulatory system should ensure an effective and credible use of inspection, investigation, surveillance and enforcement powers and implementation of an effective compliance program.

**D. PRINCIPLES FOR COOPERATION IN REGULATION**

13. The Regulator should have authority to share both public and non-public information with domestic and foreign counterparts.
14. Regulators should establish information sharing mechanisms that set out when and how they will share both public and non-public information with their domestic and foreign counterparts.
15. The regulatory system should allow for assistance to be provided to foreign Regulators who need to make inquiries in the discharge of their functions and exercise of their powers.

E. PRINCIPLES FOR ISSUERS

16. There should be full, accurate and timely disclosure of financial results, risk and other information which is material to investors’ decisions.
17. Holders of securities in a company should be treated in a fair and equitable manner.
18. Accounting standards used by issuers to prepare financial statements should be of a high and internationally acceptable quality.

F. PRINCIPLES FOR AUDITORS, CREDIT RATING AGENCIES, AND OTHER INFORMATION SERVICE PROVIDERS

19. Auditors should be subject to adequate levels of oversight.
20. Auditors should be independent of the issuing entity that they audit.
21. Audit standards should be of a high and internationally acceptable quality.
22. Credit rating agencies should be subject to adequate levels of oversight. The regulatory system should ensure that credit rating agencies whose ratings are used for regulatory purposes are subject to registration and ongoing supervision.
23. Other entities that offer investors analytical or evaluative services should be subject to oversight and regulation appropriate to the impact their activities have on the market or the degree to which the regulatory system relies on them.

G. PRINCIPLES FOR COLLECTIVE INVESTMENT SCHEMES

24. The regulatory system should set standards for the eligibility, governance, organization and operational conduct of those who wish to market or operate a collective investment scheme.
25. The regulatory system should provide for rules governing the legal form and structure of collective investment schemes and the segregation and protection of client assets.
26. Regulation should require disclosure, as set forth under the principles for issuers, which is necessary to evaluate the suitability of a collective investment scheme for a particular investor and the value of the investor’s interest in the scheme.
27. Regulation should ensure that there is a proper and disclosed basis for asset valuation and the pricing and the redemption of units in a collective investment scheme.
28. Regulation should ensure that hedge funds and/or hedge funds managers/advisers are subject to appropriate oversight.

H. PRINCIPLES FOR MARKET INTERMEDIARIES

29. Regulation should provide for minimum entry standards for market intermediaries.
30. There should be initial and ongoing capital and other prudential requirements for market intermediaries that reflect the risks that the intermediaries undertake.
31. Market intermediaries should be required to establish an internal function that delivers compliance with standards for internal organization and operational conduct, with the aim of protecting the interests of clients and their assets and ensuring proper management of risk, through which management of the intermediary accepts primary responsibility for these matters.

32. There should be procedures for dealing with the failure of a market intermediary in order to minimize damage and loss to investors and to contain systemic risk.

I. PRINCIPLES FOR SECONDARY AND OTHER MARKETS

33. The establishment of trading systems including securities exchanges should be subject to regulatory authorization and oversight.

34. There should be ongoing regulatory supervision of exchanges and trading systems which should aim to ensure that the integrity of trading is maintained through fair and equitable rules that strike an appropriate balance between the demands of different market participants.

35. Regulation should promote transparency of trading.

36. Regulation should be designed to detect and deter manipulation and other unfair trading practices.

37. Regulation should aim to ensure the proper management of large exposures, default risk and market disruption.

J. PRINCIPLES RELATING TO CLEARING AND SETTLEMENT

38. Securities settlement systems, central securities depositories, trade repositories and central counterparties should be subject to regulatory and supervisory requirements that are designed to ensure that they are fair, effective and efficient and that they reduce systemic risk.
I INTRODUCTION

The International Organization of Securities Commissions (IOSCO) is the leading international grouping of securities market regulators. Its current membership comprises regulatory bodies from over 100 jurisdictions that have day-to-day responsibility for securities regulation and the administration of securities laws. The IOSCO membership represents a broad spectrum of markets of various levels of complexity and development, of different sizes, operating in different cultural and legal environments.

This Methodology for Assessing Implementation of the IOSCO Objectives and Principles of Securities Regulation (“Methodology”) is designed to provide IOSCO’s interpretation of IOSCO’s Objectives and Principles of Securities Regulation (“Principles”) and to give guidance on the conduct of a self-assessment or third party assessment of the level of Principles implementation.

Securities and derivatives markets are vital to the growth, development and strength of market economies. They support corporate initiatives, finance the exploration of new ideas and facilitate the management of financial risk. Further, since retail investors are placing an increasing proportion of their money in mutual funds and other collective investments, securities markets have become central to individual wealth and retirement planning.

Sound and effective regulation and, in turn, the confidence it brings is important for the integrity, growth and development of securities markets.

The Preamble to IOSCO’s By-Laws states that securities authorities resolve:

- to cooperate in developing, implementing and promoting adherence to internationally recognized and consistent standards of regulation, oversight and enforcement in order to protect investors, maintain fair, efficient and transparent markets, and seek to address systemic risks;

- to enhance investor protection and promote investor confidence in the integrity of securities markets, through strengthened information exchange and cooperation in enforcement against misconduct and in supervision of markets and market intermediaries; and

- to exchange information at both global and regional levels on their respective experiences in order to assist the development of markets, strengthen market infrastructure and implement appropriate regulation.

---

2 For convenience, in this Methodology, the words “securities markets” are used, where the context permits, to refer compendiously to the various market sectors. In particular, where the context permits they should be understood to include reference to the derivatives markets. The same applies to the use of the words “securities regulation.” (See IOSCO By-Laws, Explanatory Memorandum.)

INTRODUCTION

The IOSCO By-Laws also express the intent that securities regulators, at both the domestic and international levels, should be guided by a constant concern for investor protection.

IOSCO recognizes that sound domestic markets are necessary to the strength of a developed domestic economy and that domestic securities trading is increasingly being integrated into a global market.

Increasingly globalized and integrated financial markets pose significant challenges to the regulation of securities markets. At the same time, markets, particularly some emerging markets which have seen much growth in recent years, have been prone to effects of cross-border and cross-asset interactions, and some are also susceptible to higher short-term volatilities after economic shocks or during periods of great uncertainty. Therefore, in a global and integrated environment regulators must be in a position to assess the nature of cross-border conduct if they are to ensure the existence of fair, efficient and transparent markets.

An increasingly global marketplace also brings with it the increasing interdependence of regulators. There must be strong links between regulators and a capacity to give effect to those links. Regulators must also have confidence in one another. Development of these linkages and this confidence will be assisted by the development of a common set of guiding principles and shared regulatory objectives. Consistently high regulatory standards and effective international cooperation will not only protect investors but also reduce systemic risk.

Regulators should be prepared to address the significant challenges posed by the increasing importance of technology and particularly developments in the area of electronic commerce.

The international regulatory community should provide advice, and a yardstick against which progress towards effective regulation can be measured. As the leading international grouping of securities regulators, IOSCO accepts responsibility for helping to establish the high standards for regulation. This revised Methodology evidences IOSCO’s continued commitment to the establishment and maintenance of consistently high regulatory standards for the securities industry.

All of the topics addressed in this Methodology are already the subject of IOSCO reports or Resolutions. The reports published by IOSCO and the Resolutions adopted by its membership are also a valuable source of information on the Principles that underlie effective securities regulation and the tools and techniques necessary to give effect to those Principles. This Methodology draws upon those reports as a primary source as IOSCO’s reports generally provide a more detailed treatment of the particular topic. Reference is made to IOSCO reports and Resolutions in this Methodology and these should be consulted when considering particular topics.

5 A full list of IOSCO Public Documents and Resolutions is published on IOSCO’s website: www.iosco.org.
A. OBJECTIVES OF SECURITIES REGULATION

1. The Objectives

The three IOSCO core objectives of securities regulation are:

- The protection of investors;
- Ensuring that markets are fair, efficient and transparent; and
- The reduction of systemic risk.

2. Discussion of the Objectives

The three objectives are closely related and, in some respects, overlap. Many of the requirements that help to ensure fair, efficient and transparent markets also provide investor protection and help to reduce systemic risk. Similarly, many of the measures that reduce systemic risk provide protection for investors.

Securities regulators seek to achieve these objectives through setting standards, supervising markets, market participants and their activities, effective enforcement of those standards and close cooperation with other regulators.

The objectives of securities regulation are further described below. This Methodology explores in greater detail, in the context of actual market structures and arrangements, the means to satisfy the objectives articulated in the 38 Principles.

The Protection of Investors

Investors should be protected from misleading, manipulative or fraudulent practices, including insider trading, front running or trading ahead of customers, and the misuse of client assets. Investors in the securities markets are particularly vulnerable to misconduct by intermediaries and others, but the capacity of individual investors to take action may be limited. Investors should have access to a neutral mechanism (such as courts or other mechanisms of dispute resolution) or means of redress and compensation for improper behaviour.

Further, the complex character of securities transactions and of fraudulent schemes requires strong enforcement of securities laws. Where a breach of law does occur, investors should be protected through the strong enforcement of the law.

Full disclosure of information material to investors’ decisions is the most important means for ensuring investor protection. Investors are, thereby, better able to assess the potential risks and rewards of their investments and, thus, to protect their own interests. As key components of disclosure requirements, accounting and auditing standards should be in place and they should be of a high and internationally acceptable quality.

Only duly licensed or authorized persons should be permitted to hold themselves out to the public as providing investment services, for example, as market intermediaries or the operators of exchanges. Initial and ongoing capital requirements imposed upon those license holders and authorized persons should be designed to achieve an environment in which a securities firm can meet the current demands of its counterparties and, if necessary, wind down its business without loss to its customers.

---

For purposes of this Methodology, in the case of derivatives markets, the term “investor” includes the term “customer.”
**INTRODUCTION**

Regulation of market intermediaries should assist investor protection by setting minimum standards for market participants. Investors should be treated in a just and equitable manner by market intermediaries according to standards which should be set out in rules of business conduct. Supervision by regulators should include a comprehensive system of inspection, surveillance and ongoing compliance programs, including regular interaction between regulator and market intermediaries.

Effective supervision and enforcement depend upon close cooperation between regulators at the domestic and international levels.

**Ensuring that Markets are Fair, Efficient and Transparent**

The fairness of markets is closely linked to investor protection and, in particular, to the prevention of improper trading practices. Market structures should not unduly favor some market users over others. The regulator’s approval of exchange and trading system operators and of trading rules helps to ensure fair markets.

Regulation should detect, deter and penalize market manipulation and other unfair trading practices. Regulation should aim to ensure that investors are given fair access to market facilities and market or price information. Regulation should also promote market practices that ensure fair treatment of orders and a price formation process that is reliable.

In an efficient market, the dissemination of relevant information is timely and widespread and is reflected in the price formation process. Regulation should promote market efficiency.

Transparency may be defined as the degree to which information about trading (both for pre-trade and post-trade information) is made publicly available on a real-time basis. Pre-trade information concerns the posting of firm bids and offers as a means to enable investors to know, with some degree of certainty, whether and at what prices they can deal. Post-trade information is related to the prices and the volume of all individual transactions actually concluded. Regulation should ensure the highest levels of transparency.

**The Reduction of Systemic Risk**

The reduction of systemic risk is closely linked to investor protection; however, risk taking is essential to an active market and regulation should not unnecessarily stifle legitimate risk taking. Rather, regulators should promote and allow for the effective management of risk and ensure that capital and other prudential requirements are sufficient to address appropriate risk taking, allow the absorption of some losses and check excessive risk taking. An efficient and accurate clearing and settlement process that is properly supervised and utilizes effective risk management tools is essential.

There must be effective and legally secure arrangements for default handling. This is a matter that extends beyond securities law to the insolvency provisions of a jurisdiction.

Instability may result from events in another jurisdiction or occur across several jurisdictions, so regulators’ responses to market disruptions should seek to facilitate stability domestically and globally through cooperation and information sharing.
Although regulators cannot be expected to prevent the financial failure of market intermediaries, regulation should aim to reduce the risk of failure (including through capital and internal control requirements). Where financial failure nonetheless does occur, regulation should seek to reduce the impact of that failure and, in particular, attempt to isolate the risk to the failing institution. Market intermediaries should, therefore, be subject to adequate and ongoing capital and other prudential requirements. If necessary, an intermediary should be able to wind down its business without loss to its customers and counterparties or systemic damage.

B. THE REGULATORY ENVIRONMENT

Regulation of securities and derivatives markets is necessary for the achievement of the three IOSCO core objectives. Nevertheless, inappropriate regulation can impose an unjustified burden on markets and inhibit market growth and development.

Implicit throughout this Methodology is the belief that regulation should facilitate capital formation and economic growth. In the context of regulation, there should also be recognition of the benefits of competition in the marketplace.

It is possible to identify general attributes of effective regulation that are consistent with sound economic growth:

• there should be no unnecessary barriers to entry and exit from markets and products;
• markets should be open to the widest range of participants who meet the specified entry criteria;
• in the development of policy, regulatory bodies should consider the impact of the requirements imposed;
• there should be an equal regulatory burden on all who make a particular financial commitment or promise.

More generally, there must be an appropriate and effective legal and accounting framework within which the securities and derivatives markets can operate. Securities laws and regulation cannot exist in isolation from other laws; there must be an appropriate and effective legal, accounting and auditing requirements in a jurisdiction. This may include framework documents, such as a constitution or charter, as appropriate.

Matters that IOSCO considers are of particular importance in the legal framework of a jurisdiction are set out in Appendix 1. This Appendix is not intended to be an exhaustive list of matters to be addressed in domestic legislation but rather to identify some matters that particularly impact upon the securities markets.8

---

8 In addition, sound corporate governance practices are an important additional protection of the interests of shareholders. Corporate governance may be addressed through statute or exchange listing rules or code of practice, the details of which are outside the scope of this Methodology (see also Annexure 1). See also the OECD Principles of Corporate Governance, Report of the Organization for Economic Cooperation and Development, 2004, available at http://www.oecd.org/corporate/ca/corporategovernanceprinciples/31557724.pdf.
INTRODUCTION

The accounting and auditing framework may also be considered an aspect of the legal framework; however, they (particularly the preparation of financial statements and auditor independence) are the subject of specific Principles and are discussed in Principles 18 and 21 respectively of this Methodology.

C. BACKGROUND OF THE PRINCIPLES

The Principles set out a broad general framework for the regulation of securities including the regulation of: (i) securities and derivatives markets; (ii) the intermediaries that operate in those markets; (iii) the issuers of securities; (iv) the entities offering investors analytical or evaluative services such as credit rating agencies; and (v) the sale of interests in, and the management and operation of, collective investment schemes.

The Principles were first adopted by the IOSCO Presidents’ Committee at the IOSCO Annual Conference of September 1998.9 The Principles were adopted as “a valuable source of information on principles that underlie effective securities regulation and on the tools and techniques necessary to give effect to those principles…” The Presidents’ Committee further found that: “just, efficient and sound domestic markets are critical components of many national economies and that domestic securities markets are increasingly being integrated into a global market, the Objectives and Principles encourage countries to improve the quality of their securities regulatory systems; and the Objectives and Principles represent international consensus on sound prudential principles and practices for the regulation of securities markets.” These statements remain true of today’s markets.

In 2003, the Principles were revised and a detailed Methodology for assessing implementation of the Principles was adopted. In 2010, the IOSCO Presidents’ Committee adopted a revised set of 38 Principles, drawing on developments in securities regulation and the lessons from the global financial crisis which emerged in 2007. In September 2011, the Methodology was revised to support the 38 Principles. In 2017, the Principles were updated to ensure consistency with revisions made to the Methodology to incorporate IOSCO standards issued since 2010.

IOSCO Resolutions, which provide content to the more broadly-stated IOSCO Principles and cited IOSCO reports, are a valuable source of information that should be consulted to understand the Principles and the tools and techniques to be used to achieve their implementation.10

---

9 At the same meeting, IOSCO indicated that it welcomed the efforts of other groups to strengthen financial markets and to improve the level of investor protection, in particular, work of the G-22 economies related to enhancing transparency and disclosure of information, and strengthening financial systems in national economies and globally. See also Resolution of the Presidents’ Committee on IOSCO Adoption of the Objectives and Principles of Securities Regulation, September 1998, available at http://www.iosco.org/library/resolutions/pdf/IOSCORES16.pdf.

10 A full numerical list of IOSCO Resolutions and public reports is set out on IOSCO’s website:https://www.iosco.org/about/?subsection=resolutions and http://www.iosco.org/publications/?subsection=public_reports (respectively), catalogued by reference to the month and year of their issuance.
The IOSCO Principles are one of the key standards and codes (including those on clearing and settlement) highlighted by the Financial Stability Board (FSB) as being key to sound financial systems and deserving priority implementation. Further articulation of how to apply the Principles pursuant to this Methodology helps to effectuate the general objectives of IOSCO as expressed in its By-Laws, in particular that securities authorities should cooperate to ensure better regulation of the markets on the domestic and international level by establishing standards, among other things.

Shortly after initial publication, the Principles formed the basis of an IOSCO-directed, comprehensive self-assessment exercise and continue to be used by the World Bank and the International Monetary Fund (IMF) (referred to together as IFIs, or International Financial Institutions) in the Financial Sector Assessment Program. Further information on the assessment process is provided in Section F.

D. PURPOSE OF DEVELOPING AN ASSESSMENT METHODOLOGY

The IOSCO Principles were drafted at a broad conceptual level to accommodate the differences in the laws, regulatory framework and market structures among its member jurisdictions. In drafting the Principles, IOSCO concluded that it should avoid being overly prescriptive in its requirements while, at the same time, providing sufficient guidance as to the core elements of an essential regulatory framework for securities activities.

The IOSCO Executive, Technical and Emerging Markets Committees, endorsed the development of benchmarks for assessing the Principles at the IOSCO Annual Conference in Istanbul in May 2002. Those Committees agreed that the criteria establishing the benchmarks should be as objective as reasonably possible and should permit the assessor to assign an assessment rating to a jurisdiction. This approach has been maintained and has been applied to the new Principles. Additionally, the detail of the existing Principles was considered and updated as necessary as part of the 2010 revision.

---

See the FSB’s website: [http://www.financialstabilityboard.org/cos/index.htm](http://www.financialstabilityboard.org/cos/index.htm). The FSB has been established as a successor to the Financial Stability Forum (FSF) to coordinate at the international level the work of national financial authorities and international standard setting bodies and to develop and promote the implementation of effective regulatory, supervisory and other financial sector policies in the interest of financial stability. It brings together national authorities responsible for financial stability in 24 countries and jurisdictions, international financial institutions, sector-specific international groupings of regulators and supervisors, and committees of central bank experts. IOSCO has contributed actively to the work of the FSB, previously to the FSF, which has urged commitment by national authorities to the implementation of the 12 key standards and codes.

This exercise involved the development and completion by IOSCO Members of six surveys, as follows: a high level survey as to the regulator’s opinion of the level of implementation of each Principle in its jurisdiction and five more detailed surveys intended to draw information that would facilitate documentation that the Principles in fact have been implemented, these related to the regulator (including enforcement and cooperation), issuers, collective investment schemes, market intermediaries, and secondary and other markets. A checking exercise also was conducted through IOSCO’s regional committees led by regional coordinators. This exercise provided feedback on the extent to which the responses of individual jurisdictions to these surveys were clear, complete and consistent. This process led to the publication of the initial Methodology in October 2003.

The joint World Bank/IMF Financial Sector Assessment Program (FSAP), initiated in April 1999, seeks to diagnose potential vulnerabilities and analyze development priorities in the financial sectors of member countries of the IFIs and other jurisdictions.
This Methodology draws together the key aspects relevant to the implementation of the Principles. It explains how the Principles can be implemented in practice and provides benchmarks by which the level of implementation can be assessed. It draws from, but does not expand on, relevant IOSCO Resolutions and reports, which are the core documents that IOSCO members seeking more information should use.

E. SCOPE OF THIS METHODOLOGY AND INTENDED SCOPE OF ASSESSMENTS

This Methodology is intended to apply to the securities markets, intermediaries, information service providers (such as credit rating agencies) and products addressed by the Principles and to take account of the actual configuration of the markets, the stage of their development, and participation therein.

The words “securities markets” are used, as the context permits, to refer compendiously to the various market sectors, including markets for derivatives that are securities.14 The same interpretative convention applies to the use of the words “securities regulation.”15 The Principles are not, however, specifically tailored to address all issues that are particular to derivatives markets. Accordingly, in determining whether the context permits the application of a Principle to derivatives, assessors should take into account the functional differences between, and the relevant jurisdiction’s statutory treatment of, securities and derivatives.

The Methodology does not apply to markets such as the currency, bullion, or physical commodity markets except to the extent that securities intermediaries deal for customers in such markets. The Methodology also contains information on the legal framework relevant to meeting the objectives addressed by the Principles.16

F. THE ASSESSMENT PROCESS AND ASSESSMENT MEASURES

Implementation Intended to Be a Dynamic and Constructive Process for Regulatory Improvement

The assessment is not an end in itself. Rather, assessment should be viewed primarily as a tool for identifying potential gaps, inconsistencies, weaknesses and areas where further powers or authorities may be necessary, and as a basis for framing priorities for enhancements or reforms to existing laws, rules and procedures. This Methodology specifically contemplates that the assessment process will involve a dialogue in which the regulator will explain the details of its market structure, laws, and regulatory program and how, in view thereof, the regulator believes its regulatory program addresses the Key Questions and Key Issues so as to meet the objectives of the Principles.

In this regard, IOSCO has made clear that the Principles are not intended to be a pure checklist and that the regulator and the assessors will need to exercise judgment when using the Methodology as a tool, in particular when Key Questions relating to the sufficiency of a program, of resources, or to the degree of achievement of a certain Principle are being assessed.

---

14 For an explanation of the scope of “secondary markets”, see the Preamble to the Principles Relating to Secondary and Other Markets.
15 See footnote 2.
16 See Appendix 1.
Adequacy of Implementation Depends on the Level of Development and Complexity of the Market

There is often no single correct approach to a regulatory issue. Legislation and regulatory structures vary between jurisdictions and reflect local market conditions and historical development. The particular manner in which a jurisdiction implements the objectives and Principles described in this Methodology must have regard to the entire domestic context, including the relevant legal and commercial framework. The assessor needs to be aware of the basic legal structure of a jurisdiction, including its civil, commercial and criminal law.

Consistently, this Methodology should not be interpreted as limiting the specific techniques or actions that may be taken to achieve sound securities regulation, provided that the objectives of the Principles are met. Accordingly, in order to apply this Methodology in a manner that appropriately reflects the nature of the market situation in the jurisdiction being assessed, it will be necessary to provide, or to obtain, a complete and clear description of a jurisdiction’s capital markets as part of any assessment. Markets with a single or a few issuers, that are totally domestic in nature, or that are predominantly institutional, will pose different questions and issues as to the sufficiency of application of the Principles, and as to the potential vulnerabilities likely to arise from their non-application, than jurisdictions where there are substantial numbers of retail participants, intermediaries frequently are part of complex groups, issuers are established in other jurisdictions, or the markets have other international or cross-border components.

Thus, a jurisdiction could satisfy an assessor that its approach, while not explicitly described in the Methodology, nonetheless meets the objectives of a particular Principle. Similarly, a jurisdiction could document that the application of a particular approach was not applicable to the particular trading system but that the objectives of market integrity, for example, were achieved through other means. In general, this opportunity to explain is often contained in the Key Questions themselves or in the Explanatory Notes or Scope. Accordingly, in all circumstances assessors must explain the reasons for reaching their conclusions as to whether a Key Question is satisfied, why they reach a “Yes” despite the presence of some deficiencies, why they reach a “Yes” answer based on an alternative means of achieving the objectives set out in the Key Issues and related Key Questions, or why they believe a particular Key Question is not applicable or material in a particular jurisdiction’s circumstances.

The regulator should frequently review the particular way in which securities regulation is carried out as markets themselves are in a constant state of development; therefore, the content of a jurisdiction’s regulation must also change if it is to continue to facilitate and properly regulate evolving markets.

How to Use the Methodology

This Methodology addresses each Principle in detail. It provides interpretative text to the Principles; sets out the Key Issues addressed by each Principle; establishes the Key Questions relevant to the assessment of how the jurisdiction is addressing the Key Issues; where necessary it provides Explanatory Notes; and also Benchmarks for evaluating the level of implementation.

This Methodology envisions that the assessor will establish bases for testing whether the objective of the Principle is sufficiently met from two perspectives:

(i) From a legal (or design) perspective, by identifying the powers and authorities conferred on the regulator, the relevant provisions of applicable laws, rules and regulations, and the programs or procedures intended to implement these that form the framework of securities regulation in the jurisdiction.
From the perspective of the exercise of those powers and authorities in practice, by documenting or otherwise measuring (through statistics, interviews with regulators, regulated firms, and market participants, and other methods) how the powers and responsibilities contained in the laws, rules and regulations are being exercised and whether enforcement of the relevant framework is effective. It is understood that, with respect to judging the effectiveness of the framework from a legal perspective, understanding of the basic legal structure of the jurisdiction is important, and from an empirical perspective, the fact-finding processes need to be carefully designed.

Where firms, products, or transactions are exempted from regulatory requirements or where the regulator has discretion to grant such exemptions, the reason the exemption is conferred and the process by which it is conferred should be transparent, give similar results for similarly situated persons or sets of circumstances, and be explainable in the context of the Principles.

The ability to test implementation will understandably be limited by the scope of the inquiry, the assessor’s need to rely in certain respects on statistical and anecdotal information, and the fact that implementation will be as of a point in time and not continuing or periodic. Generally, an assessment of the level of implementation of the Principles assesses only the quality of securities regulation in a jurisdiction. There may be other factors (such as the economic and political climate) that affect consistent delivery of a fair and equitable regulatory system. Any assessment of implementation cannot be expected to provide assurance against a political or economic failure or the possibility that a sound regulatory framework can be circumvented.

Certain Principles should be assessed in conjunction with one another. The Methodology and, more specifically, the benchmarking have been consciously drafted to recognize, evaluate and record gaps and flaws that recur across a number of Principles. In practice, this means that in a number of cases a fundamental deficiency could impact the assessment of several Principles, with the result that a regulator may find its assessment rating has been “downgraded” across a number of these Principles.

This could be particularly the case in the evaluation that assessors make of the effectiveness of supervision. For example, deficiencies in the supervisory program of a regulator could initially impact the grade of Principle 12 but could also affect the grade of one or more other Principles if such deficiencies have had a direct impact on the supervisory program of one or more types of participants (e.g., if they have impacted issuer supervision, CIS supervision, intermediaries’ supervision, etc.). Conversely, assessors should determine what, if any impact that deficiencies identified in the supervisory program of one or more types of participants (e.g., issuers, CIS, intermediaries, etc.) may have on their evaluation of the overall effectiveness of the supervisory program of a regulator and, depending on such evaluation, the grade of Principle 12 might also be affected. Another example is lack of resources which could initially impact the grade of Principle 3 but could also impact the grades of one or more other Principles, depending on the effect that resource challenges could have on the supervisory program of one or more types of participants or even on the effectiveness of the overall supervisory program.

However, care should be taken in regard to the application of this “cascading” effect. For example, an inability to cooperate in the context of Principle 6 (a specific standard designed to identify, monitor, mitigate and manage systemic risk) is not intended to adversely affect the broader requirements in Principles 13 to 15. The intention of the Methodology is that any undue severity is avoided.
INTRODUCTION

Assessors using this Methodology should refer to the assessed jurisdiction’s responses to the Key Questions as a first step in the conduct of an assessment.

In assigning an assessment rating, the assessor should be aware that the Principles relating to the Regulator, and for Enforcement and for Cooperation17 should be considered to be applicable to all jurisdictions, whether or not they have a market. In contrast, the other Principles that relate to regulatory functions may not apply to some jurisdictions.

For example, if a jurisdiction does not operate or permit direct access to a secondary or other market, the Principles for Secondary and Other markets may not apply. However, even in a jurisdiction without its own secondary or own other market, there should be laws that permit the jurisdiction to combat insider trading or other market misconduct originating from its jurisdiction into other jurisdictions.

Assessment Measures

The Methodology sets out clear guidance on the Key Questions that must be answered in the affirmative for a jurisdiction to score a Fully, Broadly or Partly Implemented rating (see below for an explanation on these assessment measures). It is understood that, where a Key Question is applicable, either “Yes” or “No” answers to Key Questions used for testing implementation should be augmented by explanations that explain the status of implementation in the context of a particular jurisdiction and that answers might be qualified to explain any departure from a full “Yes” or full “No” response.

Nonetheless, assessors should consider the materiality of any weaknesses and the applicability to the jurisdiction of the Key Questions when making an assessment of compliance with individual Key Questions. Where a Key Question refers to the existence of specific powers or authorities, the judgment as to implementation will generally be precisely specified, limited only by applicability. However, where a Key Question addresses the sufficiency of resources, or the sufficiency of application of a system of enforcement, or effective achievement of specific regulatory functions, the jurisdiction and the assessor may need to make a judgment as to the sufficiency of the program or related resources or degree of achievement.

Although this Methodology contemplates that judgment must be applied in assigning assessment categories in these circumstances along the spectrum between Partly and Fully Implemented, the reasons for such judgments should be expressed by reference to the Key Questions, the assessment criteria in the Benchmarks and the related objectives of regulation expressed in the Key Issues, and should be documented.

It is also expected that the status of implementation will be tested as at a specific point in time, that is, the time of the assessment. Where changes are planned, the manner in which those changes further implement the Principles, the timetable for their implementation and the reasonableness of the timetable should be reflected in the comments, but should not alter the assignment of an assessment rating.

Where new legislation, programs or procedures have been adopted recently and are untested in their application, the jurisdiction may receive a *Fully Implemented* status only as to having in place the necessary powers, and/or the design of necessary programs, to effectuate the affected Principle and not as to full implementation of the powers or the program designed to use those powers. If, however, the regulator’s prior program would have been *Fully Implemented* and the new program would be an enhancement, the jurisdiction should have an opportunity to demonstrate this and should not be penalized for improving its program.

Additionally, failure actually to use the powers, or to apply the program, however well designed, may also implicate an assessment of the existence of the powers.

After having assessed the responses to all the Key Questions of a Principle, the assessors determine the assessment rating according to the Principles’ benchmarking. Once this has been established, assessors should see whether this rating is in line with their general appreciation of the regulatory system in relation to the given Principle. If this is not the case, based on clear explanation, the assessors may decide to decrease or increase the assessment rating by one category.

Wherever a regulatory framework is assessed to be *Broadly, Partly, or Not Implemented* with respect to a particular Principle, recommendations should be proposed for achieving full implementation. Where a jurisdiction has adopted but not yet implemented new legislation or procedures, the assessor may refer to these in its recommendations.

**Assessment Categories**

*Fully Implemented*: A Principle will be considered to be Fully Implemented whenever all assessment criteria (as specified in the Benchmark) are generally met without any significant deficiencies.

*Broadly Implemented*: A Principle will be considered to be Broadly Implemented whenever a jurisdiction’s inability to provide affirmative responses to applicable Key Questions for a particular Principle is limited to the Questions excepted under the Principle’s Broadly Implemented Benchmark and, in the judgment of the assessor, such exceptions do not substantially affect the overall adequacy of the regulation that the Principle is intended to address.

*Partly Implemented*: A Principle will be considered to be Partly Implemented whenever the assessment criteria specified under the Partly Implemented Benchmark for that Principle are generally met without any significant deficiencies.

*Not Implemented*: A Principle will be considered to be Not Implemented whenever major shortcomings are found in adhering to the assessment criteria as specified in the Not Implemented Benchmark.

*Not Applicable*: A Principle will be considered to be Not Applicable whenever it does not apply given the nature of the securities market in the jurisdiction and relevant structural, legal and institutional considerations. Criteria defining this assessment rating are not indicated for every Principle.
II  PRINCIPLE-BY-PRINCIPLE ANALYSIS

A.  PRINCIPLES RELATING TO THE REGULATOR

1.  Preamble

In this Methodology, the regulator refers to the authority or authorities responsible for regulating, overseeing and supervising securities and/or derivatives markets (“regulator”). Responsible, or competent, authority(ies) are those with jurisdiction over each of the issues addressed in the Principles and this Methodology under the headings: Issuers; Auditors; Credit Rating Agencies and Other Information Service Providers; Collective Investment Schemes; Market Intermediaries; and Secondary and Other Markets (including clearing and settlement), and may include other law enforcement, governmental and regulatory bodies.

*The Principles do not prescribe a specific structure for the regulator.*

In this Methodology, the term “regulator” is used compendiously.

There need not be a single regulator. In many jurisdictions, the desirable attributes of the regulator set out in the Principles are in fact the shared responsibility of two or more government or quasi-government agencies with governmental powers.

The Principles establish the desirable attributes of a regulator. An independent and accountable regulator with appropriate powers and resources is essential to ensure the achievement of the three core objectives of securities regulation. The Principles consider the enforcement and market oversight work of the regulator and the need for close cooperation between regulators essential to the achievement of the regulatory function. The potential role of self-regulatory organizations and the desirable attributes of such organizations are separately addressed under Principle 9.

Regulators also have an important role to play in identifying, monitoring, mitigating and managing systemic risk, in regularly reviewing the perimeter of regulation and in addressing conflicts of interest and misalignment of incentives.

*The regulator and the effectiveness of its actions should be assessed in the context of the regulatory framework and the legal system of the jurisdiction being assessed. The regulator should also be assessed taking into account the situation, and stage of development, of the market of the assessed country (see the Introduction to this Methodology).*

To the extent objectives or tasks are to be achieved or powers exercised by the “regulator,” a jurisdiction should be deemed to have implemented the Principles as long as one of the competent authorities can achieve each individual objective or task or exercise a specific power even if the various objectives or tasks are achieved, or the various powers are exercised, by several different law enforcement, governmental and regulatory authorities.

Principles 1 to 5 closely interrelate with Principles 10 to 15. Therefore, evaluations of these Principles should be consistent. For example, it should be impossible to conclude that Principle 3 is fully implemented if the regulator is not endowed with comprehensive surveillance powers as required under Principle 10.
In every case, regulators should be held accountable for issuing and implementing rules and regulations necessary to achieve the key core objectives of securities regulation, monitoring whether the objectives are achieved, and taking enforcement or other appropriate action when there is a violation or lack of compliance with regulatory requirements within the context of their own legal and regulatory framework. Regulators also should be required to implement the regulatory framework responsibly, fairly and effectively.

2. **Scope**

The assessor should obtain a comprehensive overview of a given jurisdiction’s regulatory system. As the responsibility for securities regulation can be shared by more than one competent authority, the assessor should obtain information that reflects each authority’s structure, powers, scope of responsibility and operations. For example, in some jurisdictions, market intermediaries other than securities firms (e.g., banking or credit institutions; insurance providers; and retirement, pension, and superannuation funds) may engage in the securities activities listed above, but may be subject to a different regulatory authority, for all or certain of their activities.

Where more than one authority is responsible, the assessor should obtain a description of the division of responsibility with respect to each of the functional areas of regulation identified above and the details of cooperative arrangements among the authorities.

The sharing of tasks in the regulatory system should also be considered when assessing Principles 6 to 7. With regard to Principle 8, the assessor should see whether the regulator has identified and assessed the degree to which the conflicts exist and determine the degree to which regulation may be necessary to ensure the conflicts are avoided, eliminated, disclosed, or otherwise managed.
3. **Principles 1 through 8**

| Principle 1 | The responsibilities of the Regulator should be clear and objectively stated |

Unless the regulator’s responsibilities are clearly and objectively stated, investors and market participants may be uncertain about the degree to which the regulator is able to protect the market’s integrity through fair and effective oversight. Where this uncertainty exists, concerns about the market’s integrity may become a self-fulfilling prophecy, to the detriment of all market participants. The capacity of the regulator to act responsibly, fairly and effectively, therefore, is assisted by a clear definition of responsibilities, preferably set out in law; and strong cooperation among responsible regulators, through appropriate channels.

The desirable attributes of a regulator include an organizational structure and powers that permit it to achieve the basic objectives of securities regulation. In assessing this Principle, the assessor should consider whether, and how, the legal provisions that authorize and provide for the operation of the regulator demonstrate that the regulator can perform its duties, according to procedures and objectives predefined by the relevant regulatory framework. The assessor also should assess whether the arrangements in place demonstrate the ability of the regulatory framework to create and implement a system intended to protect investors, provide fair, efficient and transparent markets, and reduce systemic risk.

The packaging of products and services may be such that a single product or service exhibits characteristics traditionally associated with at least two of the following: securities; banking; and insurance. Legislation should be designed to ensure that any division of responsibility among financial sector regulators avoids gaps or inequities. Where there is a division of regulatory responsibilities, similar types of conduct or products should be subject to similar regulatory requirements regardless of how responsibility is divided among regulators.

**Key Issues**

1. Responsibilities of the regulator should be clear and objectively set out, preferably in law.

2. Legislation should be designed to ensure that any division of responsibility among regulators avoids gaps or inequities. Where there is a division of regulatory responsibilities, substantially the same type of conduct and product generally should be subject to consistent regulatory requirements.

3. There should be effective cooperation among responsible regulators, through appropriate channels.\(^\text{19}\)

---

\(^{19}\) See also Principles 13 and 14.
PRINCIPLES RELATING TO THE REGULATOR

Key Questions

1. Are the regulator’s responsibilities, powers and authority:\(^{20}\)
   (a) Clearly defined and objectively set out, preferably in law, and in the case of powers and authority, enforceable?
   (b) If the regulator can interpret its authority, are the criteria for interpretation clear and transparent?
   (c) Is the interpretative process transparent enough to preclude situations in which an abuse of discretion can occur?

2. When more than one regulator is responsible for securities regulation:
   (a) Where responsibility is divided among regulators, is legislation designed to avoid regulatory differences or gaps?
   (b) Is substantially the same type of conduct and product generally subject to consistent regulatory requirements?
   (c) Are responsible regulators required to cooperate and communicate in areas of shared responsibility?
   (d) Are there arrangements for cooperation and communication between responsible regulators through appropriate channels and are cooperation and communication occurring between responsible regulators without significant limitations?\(^{21}\)

Explanatory Notes

Where the responsibilities for securities regulation are shared by more than one regulator and there are differences in the responsibilities and powers of those regulators, the assessment should identify each of the relevant responsible regulators and take into consideration whether the responsibilities and powers of the regulators taken in combination are sufficient to address each component of the Principles and the Key Questions and Key Issues thereunder. This will require an explanation of how powers and responsibilities considered relevant in the Methodology are distributed and executed in a jurisdiction or where and how regulatory powers are distributed e.g., by function, security, service or entity.

In this respect, the Principles are neutral as to whether securities regulation can be distinguished by security, function, service, entity, and/or type of transaction. What is important is to determine, and to consider, how regulation applies to the financial markets, participants, intermediaries, securities and services that characterize the jurisdiction being assessed.

\(^{20}\) Regulatory discretion may be necessary to meet regulatory objectives in a rapidly evolving market, but how the scope of such discretion is determined and how the manner of its exercise is subject to review is relevant to the regulator’s ability to act responsibly, fairly and consistently.

\(^{21}\) Measures to protect the confidentiality of non-public information consistent with permitted uses should not be considered significant limitations. See also Principle 14.
PRINCIPLES RELATING TO THE REGULATOR

Gaps should be construed to mean gaps in coverage (not in performance) of areas of the basic elements (functions and objectives) of securities regulation (e.g., collective investment schemes, issuers, auditors, credit rating agencies, and other information service providers, market intermediaries, secondary and other markets, enforcement) which are applicable to, but are not covered by, the system being assessed. The assessor should draw the views of the jurisdiction being assessed regarding gaps and inequities. More specific functional gaps or deficiencies should be treated under the specific Principles related to each element of securities regulation. Evidence should be provided as to how all areas addressed by the Principles are covered and, where there are divisions of authority that effective arrangements exist for cooperation.

Where legislation does not satisfactorily address gaps or inequities and an amendment is not possible in the short-term, potential gaps or inequities may be addressed by procedures intended to ensure their avoidance as a result of any division of responsibilities, such as protocols or arrangements with other responsible authorities to assure appropriate and equitable coverage of the functions and objectives of securities regulation.

Benchmarks

Fully Implemented

Requires affirmative responses to all applicable Questions except to Question 2, where it is not applicable as there is a single regulator responsible for securities regulation in the jurisdiction.

Broadly Implemented

Requires affirmative responses to all applicable Questions except to Questions 2(b) and 2(d) provided that different responsible regulators do not supervise the same entity, e.g., where prudential and conduct of business supervision of the same entity is performed by different responsible regulators.

Partly Implemented

Requires affirmative responses to all applicable Questions except to Questions 1(c) and 2(b) and 2(d) if more than one responsible regulator supervises the same entity.

Not Implemented

Inability to respond affirmatively to one or both of Questions 1(a) and 1(b) and, if applicable, one or more of Questions 2(a) or 2(c).
**Principle 2** The Regulator should be operationally independent and accountable in the exercise of its functions and powers

While the regulator should be accountable under a jurisdiction’s legal and governing structure, the regulator should also be operationally independent from external political or commercial interference. Without such independence investors and other market participants may come to doubt the regulator’s objectivity and fairness, with deleterious effects on the market’s integrity. Generally, the regulator’s independence will be enhanced by a stable source of funding. It also means that the regulator should remain independent from the market participants that it supervises.

In some jurisdictions, particular matters of regulatory policy require consultation with or even approval by, a government, minister, or other legislative authority. The circumstances in which such consultation or approval is required or permitted should be clear and the process sufficiently transparent or subject to review to safeguard its integrity. Generally, it is not appropriate for these circumstances to include decision making on day-to-day technical matters.

Independence implies:

- a regulator that operates independently of sectoral interest; and
- the ability to undertake regulatory measures and enforcement actions without external (political or commercial) interference.

Accountability implies that the regulator is subject to appropriate scrutiny and review, including:

- periodic public reporting by the regulator on its performance;
- transparency in the regulator’s process and conduct; and
- a system permitting judicial review of licensing, authorizing or enforcement related final decisions of the regulator.

The confidential and commercially sensitive nature of much of the information in the possession of the regulator must be respected. Safeguards must be in place to protect such information from inappropriate use or disclosure.

The capacity of the regulator to act independently will be enhanced by adequate legal protection for the regulator and its staff when acting in the *bona fide* discharge of their functions and powers.

**Key Issues**

*Independence*

1. The regulator should be operationally independent from external political interference and from commercial, or other sectoral interests, in the exercise of its functions and powers.

---

22 The term “interference” means a formal or informal level and method of contact that affects day-to-day decision making and is unsusceptible to review or scrutiny.
2. Consultation with or approval by a government minister or other authority should not include operational decisions.

3. In jurisdictions where particular matters of regulatory policy require consultation with, or even approval by, a government minister or other authority, the circumstances in which such consultation or approval is required or permitted should be clear and the process of consultation and criteria for action sufficiently transparent or subject to review to safeguard its integrity.

4. The regulator should have a stable source of funding sufficient to exercise its powers and responsibilities.

5. There should be adequate legal protection for the regulator and its staff acting in the "bona fide" discharge of their functions and powers.

Accountability

6. The regulator should be publicly accountable in the use of its powers and resources to ensure that the regulator maintains its integrity and credibility.

7. There should be a system permitting judicial review of final decisions of the regulator.

8. Where accountability is through the government or some other external agency, the confidential and commercially sensitive nature of information in the possession of the regulator must be respected. Safeguards should be in place to protect such information from inappropriate use or disclosure.

Key Questions

Independence

1. Does the regulator have the ability to operate on a day-to-day basis without:
   (a) External political interference?
   (b) Interference from commercial or other sectoral interests?\(^ {23} \)

2. Where particular matters of regulatory policy require consultation with, or even approval by, a government minister or other authority:
   (a) Is the consultation process established by law?
   (b) Do the circumstances, in which consultation is required, exclude decision making on day-to-day technical matters?
   (c) Are the circumstances in which such consultation or approval is required or permitted clear and the process sufficiently transparent, or the failure to observe procedures and the regulatory decision or outcome subject to sufficient review, to safeguard its integrity?

3. Does the regulator have a stable and continuous source of funding sufficient to meet its regulatory and operational needs?
4. Are the regulator, the head and members of the governing body of the regulator, as well as its staff, accorded adequate legal protection for the *bona fide* discharge of their governmental, regulatory and administrative functions and powers?24

5. Are the head and governing board of the regulator subject to mechanisms intended to protect independence, such as: procedures for appointment; terms of office; and criteria for removal?

**Accountability**

6. With reference to the system of accountability for the regulator’s use of its powers and resources:

   (a) Is the regulator accountable to the legislature or another government body on an ongoing basis?

   (b) Is the regulator required to be transparent25 in its way of operating and use of resources and to make public its actions that affect users of the market and regulated entities, excluding confidential or commercially sensitive information?

   (c) Is the regulator’s receipt and use of funds subject to review or audit?

7. Are there means for natural or legal persons adversely affected by a regulator’s decisions or exercise of administrative authority ultimately to seek review in a court, specifically:

   (a) Does the regulator have to provide written reasons for its material decisions?26

   (b) Does the decision-making process for such decisions include sufficient procedural protections to be meaningful?

   (c) Are affected persons permitted to make representations prior to such a decision being taken by a regulator in appropriate cases?27

   (d) Are all such decisions taken by the regulator subject to a sufficient, independent review process, ultimately including judicial review?

8. Where accountability is through the government or some other external agency, is confidential and commercially sensitive information subject to appropriate safeguards to prevent inappropriate use or disclosure?

---

23 Principle 3. Administrative actions, such as licensing or commencement of inspections or investigations ordinarily should be particularly scrutinized for freedom from inappropriate influence.

24 Principle 5.

25 The regulator must be accountable as a matter of law. The regulator may be considered to be required to be transparent, if, as a general principle of administrative law, procedure or practice, its use of its powers and resources generally is transparent.

26 The regulator need not be required by legislation to give written reasons provided that it has formal written procedures as to when it will do so.

27 For example, a warning letter may not be subject to additional process.
Explanatory Notes

The balance between independence and accountability is delicate. The Principles take no position on location of the regulator within the governmental structure. Nevertheless, in different circumstances the safeguarding of independence must be particularly scrutinized. Not only should the allocation of regulatory responsibilities, the framework for accountability and procedures, or other mechanisms in place to achieve independence be considered, but also the actual operation of the relationship between the regulator and any governmental overseer should be considered. If possible, the effect of such inter-relationship should be reviewed in specific cases. For example, in some jurisdictions, rules or policies may require approval by a government minister or other authority, or other important regulatory matters may require consultation with or approval by a government minister or other authority. Also, sometimes matters are reviewed within the government for compliance with applicable law. The circumstances in which such consultation or approval is required or permitted should be clear, and the process sufficiently transparent or subject to review as to safeguard its integrity.

Independence or accountability is not necessarily compromised just because the regulator is part of the government and/or the top officials of the regulator are political appointments, including appointees that previously served in the government.

Criteria for decision-making also can insulate the process from inappropriate political interference. For example, the ability to reverse licensing decisions at the ministerial level without clear criteria both for the refusal to licence and related decision-making process would inappropriately infringe independence. A stable source of funding is critical because operational independence can be compromised if funding can be curtailed by external action. The assessor may inquire of the assessed jurisdiction as to whether the source of funds can adversely affect its accessibility.

Forms of funding may vary for each regulator and includes cases where the regulator is funded by the government’s budget.

As this Principle tests independence, the ability to protect sensitive information passed to other decision-making authorities should be part of the regulatory framework to prevent undue interference with the regulatory authorities’ operations. The safeguards in place must be part of the system.

In assessing implementation of Key Question 1, the assessor should determine whether, practically speaking, the regulator is in fact operationally independent from external political interference and from commercial, or other sectoral interests, in the exercise of its functions and powers.

A positive response to Key Question 1(a) in relation to independence from external political interference will generally require the assessor to be satisfied – taking into account the legal, regulatory and political environment in which the regulator operates – that:

- the legal and regulatory framework does not have structural features which could significantly impact the independence of the regulator; and
- there is no evidence of actual interference in day-to-day operational decisions or other evidence pointing to a deficit in independence; in the assessment process the assessor should also consider information based on discussions with market participants or other reliable sources related to whether or not market participants in their entirety perceive the regulator to be de facto independent.
One example of adequate legal protection for regulators acting in *bona fide* performance of regulatory functions would be qualified immunity from personal liability for actions taken in good faith within the scope of the regulator’s authority. Other arrangements may also be possible. The adequacy and type of legal protection for regulators acting in *bona fide* performance of their regulatory functions must be evaluated according to the legal system applicable in the assessed jurisdiction.

Formal consultation with commercial interests, including those subject to regulation, as contemplated under Principle 4, does not impair independence.

**Benchmarks**

*Fully Implemented*

Requires affirmative responses to all applicable Questions.

*Broadly Implemented*

Requires affirmative responses to all applicable Questions except to Question 6(b).

*Partly Implemented*

Requires affirmative responses to all applicable Questions except to either Questions 2(b) or 2(c), and to Questions 4, 5, 6(b) and 7(c).

*Not Implemented*

Inability to respond affirmatively to one or more of Questions 1(a), 1(b), 2(a), both 2(b) and 2(c), 3, 6(a), 6(c), 7(a), 7(b), 7(d) or 8.
Principle 3 The Regulator should have adequate powers, proper resources and the capacity to perform its functions and exercise its powers.

The regulator should have adequate powers, proper resources (including adequate funding), and the capacity to perform its functions and exercise its powers, both in regular and in emergency situations. What this means in practical terms is the subject of elaboration in this section. It includes powers of licensing, supervision, inspection, investigation, and enforcement. It also includes the capacity and resources to attract and retain appropriately trained, qualified, and skilled staff to perform its functions and exercise its powers, while being able to provide ongoing training to its staff.

The regulator must ensure that its staff receives ongoing training as required.

The powers and resources of the regulator should be consistent with the size, complexity, and type of the markets that it oversees and its need to meet the functions contained in these Principles. The assessor should determine after assessing all the Principles and the effectiveness of the jurisdiction’s regulatory program if there is a substantial basis for concluding that the powers, resources, and capacity of the regulator are sufficient.

This Principle is relevant for the work of the regulator taking into account that the Principle makes sure the appropriate performing of the regulator’s functions and the effective exercise of its powers, which is fundamental in terms of achieving both: 1) successful preventative measures (surveillance, inspection, investigation); and 2) credible and effective corrective measures (detect, deter, enforce, sanction, redress and correct violations of securities laws). Any circumstance that impedes or challenges the appropriate and effective exercise of the functions and powers of the regulator is detrimental to the objectives behind these Principles. In this way, this would be consistent and in compliance with Principles for the Enforcement of Securities Regulation (10 to 12) and Principles for Cooperation in Regulation (13 to 15), and the other way around, taking into account that they are inter-related.

The regulator should play an active role in the education of investors. Investor education may enhance investors’ understanding of the role of the regulator and provide investors with the tools to assess the risks associated with particular investments and to protect themselves against fraud (and other abuses). Investor education and financial literacy programs can also be useful tools for the securities regulators in supporting their regulation and supervision. For example, investor education programs can complement regulations that enforce conduct standards, require financial institutions to provide clients with appropriate information, strengthen legal protections for consumers, or provide for redress. IOSCO recognizes that there is no one-size-fits-all model for investor education and financial literacy programs.
PRINCIPLES RELATING TO THE REGULATOR

Key Issues28

1. The regulator should have powers of licensing, supervision, inspection, investigation and enforcement.
2. The regulator should have adequate funding to exercise its powers and responsibilities.
3. The level of resources should recognize the difficulty of attracting and retaining experienced and skilled staff.
4. The regulator should ensure that its staff receives adequate, ongoing training.
5. The regulator should have policies and governance practices in place to perform its mandate adequately.
6. Regulators should play an active role in promoting the education of investors and other market participants.

Key Questions29

1. Are the powers and authorities of the regulator sufficient, taking into account the nature of a jurisdiction’s markets and a full assessment of these Principles to meet the responsibilities of the regulator(s) to which they are assigned?
2. With regard to funding:
   (a) Is the regulator’s funding adequate to permit it to fulfil its responsibilities, taking into account the size, complexity and types of functions subject to its regulation, supervision or oversight?
   (b) Can the regulator affect the operational allocation of resources once funded?
3. Does the level of resources recognize the difficulty of attracting and retaining experienced and skilled staff?
4. Does the regulator ensure that its staff receives adequate ongoing training?
5. Does the regulator have policies and governance practices to perform its functions and exercise its powers effectively?
6. Does the regulator play an active role in promoting education in the interest of protecting investors?

---

28 See also Key Questions on enforcement and cooperation under Principles 10, 11, 13 and 15 and Key Questions on regulatory powers related to issuers, market intermediaries, collective investment schemes and secondary and other markets.

29 The answers to these questions should be consistent with powers and authorities discussed in other Sections.
PRINCIPLES RELATING TO THE REGULATOR

Explanatory Notes

The powers granted to the regulator should be commensurate to the functions committed to the regulator. Where there is more than one responsible authority, the powers required for implementation may be distributed among them. The powers granted, taken together, should be sufficient to provide the ability to achieve implementation of the other Principles set forth in this Methodology. The assessor may wish to review this Principle after the full assessment is complete.

An assessment of governance should go beyond the framework of rules and practices by which the regulator ensures accountability, fairness, and transparency. It needs to go into the ability of the regulator to formulate its strategic direction and deliver its mandate. This could include, but is not limited to, governance practices for developing priorities and responsive strategies.

In complex markets, technology may be necessary to assure efficient discharge of regulatory functions. An appropriate program of investor education in a jurisdiction may also assist the regulator in carrying out its responsibilities.

The regulator should be given an opportunity to demonstrate to the assessor that its powers and funding are adequate and, in particular, how they are deployed to achieve its objectives and legal and regulatory responsibilities (e.g., how the regulator measures effectiveness, promptness of action, level of coverage and ability to meet its priorities).

Turnover of staff may be an indication of inability to attract and retain experienced and skilled staff. The assessor should inquire further about the reasons.

The regulator should also be invited to explain what sorts of investor education activities or programs are promoted by the regulator within the assessed jurisdiction.

Benchmarks

Fully Implemented

Requires affirmative responses to all applicable Questions.

Broadly Implemented

Requires affirmative responses to all applicable Questions except to Question 3.

Partly Implemented

Requires affirmative responses to all applicable Questions except to Questions 2(b), 3, 4, 5, and 6.

Not Implemented

Inability to respond affirmatively to one or both of Questions 1 and 2(a).

30 For Broadly and Partly, the availability and sufficiency of resources in fact may need to be evaluated along the spectrum of Fully to Partly with guidance from the assessed jurisdiction.
Principle 4  The Regulator should adopt clear and consistent regulatory processes

Clear, consistent, transparent procedures and processes are part of fundamental fairness and of a framework for developing regulatory decisions and for undertaking regulatory actions that assure accountability. Transparency policies must however, balance the rights of individuals to confidentiality, and regulators’ enforcement and surveillance needs, with the objective of fair, equitable and open regulatory processes.

In exercising its powers and discharging its functions, the regulator should adopt processes, which are:

- consistently applied;
- comprehensible;
- transparent to the public;
- fair and equitable.

In the formulation of policy, the regulator should:

- have a process for consulting with the public including those who may be affected by the policy;
- publicly disclose its policies in important operational areas;\(^{31}\)
- observe standards of procedural fairness;
- have regard to the cost of compliance with the regulation.

Many regulators have authority to publish reports on the outcome of investigations or inquiries, particularly where publication would provide useful guidance to market participants and their advisers. Any publication of a report must be consistent with the rights of an individual to a fair hearing and the protection of personal data — factors that will often preclude publicity when a matter is still the subject of investigation.

Key Issues

**Clear and Equitable Procedures with Consistent Application**

1. In exercising its powers and discharging its functions, the regulator should adopt processes which are:

   (a) Consistently applied.

   (b) Comprehensible.

---

\(^{31}\) In some operational areas, and in some cases, particularly in the areas of surveillance and enforcement, consultation and disclosure may be unnecessary or inappropriate as it may compromise the effective implementation of the policy.
PRINCIPLES RELATING TO THE REGULATOR

(c) Transparent to the public.
(d) Fair and equitable.

2. In the formulation of policy, subject to enforcement and surveillance concerns, the regulator should:
   (a) Have a process for consulting with the public, including those who may be affected by the policy.
   (b) Publicly disclose its policies in important operational areas.\(^32\)
   (c) Have regard to the cost of compliance with regulation.

3. The regulator should observe standards of procedural fairness.

Transparency and Confidentiality

4. Transparency practices, such as publication of reports on the outcome of investigations or inquiries, where permitted, should be consistent with the rights of an individual to a fair hearing and the protection of personal data — factors that will often preclude publicity when a matter is still the subject of investigation.

Key Questions

Clear and Equitable Procedures

1. Is the regulator subject to reasonable procedural rules and regulations?

2. Does the regulator:
   (a) Have a process for consulting with the public, or a section of the public, including those who may be affected by a rule or policy, for example, by publishing proposed rules for public comment, circulating exposure drafts or using advisory committees or informal contacts?
   (b) Publicly disclose and explain its rules and regulatory policies, not including enforcement and surveillance policies, in important operational areas, such as through interpretations of regulatory actions, setting of standards, or issuance of decisions stating the reasons for regulatory actions?
   (c) Publicly disclose changes and reasons for changes in rules or policies?
   (d) Have regard to the costs of compliance with regulation?
   (e) Make all rules and regulations available to the public?\(^33\)
   (f) Make its rulemaking procedures readily available to the public?\(^34\)

---

\(^{32}\) That is policies with respect to issuers, collective investment schemes, market intermediaries and secondary and other markets.

\(^{33}\) For example, on its website or through readily accessible reports. See also Principle 1.

\(^{34}\) See also Principle 2.
3. In assessing procedural fairness:
   (a) Are there rules in place for dealing with the regulator that are intended to ensure procedural fairness?
   (b) Is the regulator required\(^{35}\) to give reasons in writing for its decisions that affect the rights or interests of others?
   (c) Are all material decisions of the regulator in applying its rules subject to review?
   (d) Are such decisions subject to judicial review where they adversely affect legal or natural persons?
   (e) Are the general criteria for granting, denying or revoking a licence made public, and are those affected by the licensing process entitled to a hearing with respect to the regulator’s decision to grant, deny or revoke a licence?

*Transparency and Confidentiality*

4. If applicable, are procedures for making reports on investigations public consistent with the rights of individuals, including confidentiality and data protection?

*Consistent Application*

5. Are the regulator’s exercise of its powers and discharge of its functions consistently applied?

*Explanatory Notes*

The assessor should establish whether there are specific laws, rules or procedures that govern the administrative structure and whether these rules are clear, accessible and transparent. Such rules would assist in assuring that procedures are: consistently applied; comprehensible; transparent to the public; and fair and equitable.

In some operational areas, and in some cases, particularly in areas of surveillance and enforcement, consultation and disclosure may be unnecessary or inappropriate as they may compromise the effective implementation of regulatory policy.

There may be different levels of, or procedures for, review for different types of regulatory actions. For example, rulemaking may be subject to different review procedures than actions with respect to granting licences or taking enforcement action. This is not inconsistent with the Principles if the review procedures are transparent and equitably applied.\(^{36}\)

An effective consultation process may be responsive to the need to take into account the impact of regulation and to have regard to the costs of compliance with regulation. The regulator should be able generally to assess the use of its resources. A regulator is not required to conduct a specific cost/benefit analysis in order to be found to have regard for the cost of compliance when framing regulatory policy.

\(^{35}\) The regulator need not be required by legislation to provide reasons, provided that it has written procedures as to when it will do so.

\(^{36}\) See also Principle 2, Key Question 7.
PRINCIPLES RELATING TO THE REGULATOR

Interviews with affected parties and other documentation may be necessary to confirm whether procedures are, in fact, consistently applied, fair and equitable, and the market is open to fair competition practices.

Benchmarks

Fully Implemented

Requires affirmative responses to all applicable Questions.37

Broadly Implemented

Requires affirmative responses to all applicable Questions except to Question 2(d).

Partly Implemented

Requires affirmative responses to all applicable Questions except to Questions 2(b), 2(d), 2(f) and 5.

Not Implemented

Inability to respond affirmatively to one or more of Questions 1, 2(a), 2(c), 2(e), 3(a), 3(b), 3(c), 3(d), 3(e), or 4.

---

37 Principle 2. If there is no power to make reports public, then there would be no need to protect confidentiality.
This Principle refers to the integrity and the means for achieving and demonstrating the integrity of the regulator and its staff. In the context of this Principle, the term “staff” is intended to include the head of the regulator, as well as its members. Only the highest professional standards of conduct are appropriate to achieving the objectives of regulation.

**Key Issues**

1. The staff of the regulator should observe the highest professional standards and be required to follow clear guidance on matters of conduct including:
   (a) The avoidance of conflicts of interest (including the conditions under which staff may trade in securities).
   (b) The appropriate use of information obtained in the course of the exercise of powers and the discharge of duties.
   (c) The proper observance of confidentiality and privacy provisions and the protection of personal data.
   (d) The observance of procedural fairness standards.

2. Failure to meet standards of professional integrity should be subject to sanctions.

**Key Questions**

1. Are the staff of the regulator required to observe requirements or a “Code of Conduct” or other written guidance, pertaining to:
   (a) The avoidance of conflicts of interest?
   (b) Restrictions on the holding or trading in securities subject to the jurisdiction of the regulator and/or requirements to disclose financial affairs or interests?
   (c) Appropriate use of information obtained in the course of the exercise of powers and the discharge of duties?
   (d) Observance of confidentiality and privacy provisions and the protection of personal data?
   (e) Observance by staff of procedural fairness standards in the performance of their functions?

2. Are there:
   (a) Processes to investigate and resolve allegations of violations of the above standards?
   (b) Legal or administrative sanctions for failing to adhere to these standards?
Explanatory Notes

The Key Questions are intended to address requirements relating to maintenance of high professional standards. The assessor should obtain documentation of specific procedures and how they have been used in specific cases. The assessor should also look at documentation of confidentiality measures and arrangements to avoid conflicts of interest.\textsuperscript{38} For example, guidance on conflicts of interest should address outside employment and holding of other positions, among other things.

Restrictions on trading could include, for example, pre-clearance of transactions or restrictions on transactions above a specified threshold.

Benchmarks

\textit{Fully Implemented}

Requires affirmative responses to all applicable Questions.

\textit{Broadly Implemented}

Requires affirmative responses to all applicable Questions except that there may not be active monitoring of matters under Questions 1(a) and 1(b).

\textit{Partly Implemented}

Requires affirmative responses to all applicable Questions except that with respect to Questions 1(a) through (e), there may be minor shortcomings in observance of procedures, including no active monitoring under Questions 1(a) and 1(b).

\textit{Not Implemented}

Inability to respond affirmatively to one or more of Questions 1(a), 1(b), 1(c), 1(d) or 1(e), subject to the departures from full compliance permitted under \textit{Partly Implemented}, or failure to respond affirmatively to either of Questions 2(a) or 2(b).

\textsuperscript{38} See also Principle 4.
Principle 6 The Regulator should have or contribute to a process to identify, monitor, mitigate and manage systemic risk, appropriate to its mandate

Objective

Systemic risk refers to the potential that an event, action, or series of events or actions could have a widespread adverse effect on the financial system and, in consequence, on the economy. Securities regulators are concerned about systemic risk because of its potential widespread effects and potential to harm a large number of investors and market participants.

Reducing systemic risk is one of the three IOSCO core objectives of securities regulation. Principle 6 recognizes that securities regulators have an important and unique role to play in identifying, monitoring, mitigating, and managing systemic risk. Systemic risk in the securities markets in most cases is not the result of sudden adverse events, but instead the result of slow and prolonged build-up of risk over a longer time frame. It may also take the form of a more gradual erosion of market trust, for example, as a result of widespread market misconduct. Implementing many of the other Principles of securities regulation will be important in mitigating risks to market trust. In particular, strong investor protection standards, transparency offered by extensive disclosure requirements, risk monitoring, research and analytics, vigorous enforcement, robust resolution regimes, and other factors are all important elements of how the regulator can mitigate and manage risks against a gradual erosion of market trust.

Promoting financial stability is a shared responsibility amongst the financial sector regulatory community. Securities regulators, prudential regulators and central banks all have important roles to play and come equipped with different tools at their disposal. The nature of the risk identified will, to a large extent, dictate which set of tools may be most effective in addressing the risk. The tools available to securities regulators to reduce systemic risk generally consist of strong investor protection standards and enforcement measures, disclosure and transparency requirements, business conduct regulation, and resolution regimes for market intermediaries. This Principle explicitly recognizes that securities regulators may not have the appropriate tools to address certain forms of systemic risk and, therefore, it is important that they cooperate with other regulators.

Effective securities regulation is predicated on preserving market integrity, financial stability and investor protection. This approach recognizes that the market is composed of an interconnected network where the activities of one or more participants can have spill-over effects on all. Systemic risk arising in one part of the financial system may also be spread to other parts of the financial system through the markets and the economy. Consequently, securities regulators need to work with other relevant regulators and authorities to understand the interconnections between market participants, markets and market infrastructures.

Securities markets are characterized by rapid changes and financial innovation. Innovation should be encouraged and facilitated where it has the potential to improve the functioning of the markets and to provide investors with greater choice. However, innovation may not always be beneficial, particularly when it leads to opacity or is associated with poor risk management, which could eventually lead to the build-up of risks. Regulators should be aware of new and
evolving products, business models and participants, and the potential risks they may pose to
the financial system as a whole. Regulators need to strive to stay in step with and understand
the potential risks associated with financial innovation and develop approaches that permit
beneficial innovation while preserving investor protection. Risk monitoring, research and
analytics should include monitoring of innovation and new technologies.

Securities regulators should develop key risk metrics relevant to measuring systemic risks
arising within securities markets, intermediaries and regulated activities, and improve their
understanding and application of tangible steps that can be taken to mitigate such risks.
Securities regulators may be able to leverage work done by other supervisors but it will be
important to develop their own risk indicators through the use of qualitative and quantitative
data.

The identification, monitoring, mitigation and management of systemic risk should be
integrated into an organized and documented risk management framework through formalized
processes and arrangements.

Key Issues

1. The regulator should have or contribute to regulatory processes through formalized
   arrangements, which may be cross-sectoral, to identify, monitor, mitigate, and
   appropriately manage systemic risk based on clear responsibilities in relation to
   systemic risks. The process can vary with the complexity of the market.

2. Given the central role of markets in the overall financial system and their capability to
generate and/or transmit risks, securities regulators should:
   (a) work with other supervisors to improve the overall understanding of the
       economics of the securities markets, their vulnerabilities and the
       interconnections with the broader financial sector and the real economy; and
   (b) have or develop formal systems and processes to permit the sharing of
       information and knowledge as an essential component for the delivery of an
       effective regulatory response to systemic risk.

3. The regulator should have appropriately skilled human and adequate technical
   resources to support effective risk arrangements.

Key Questions

1.
   (a) Does the regulator have clear responsibilities in:
       (i) identifying, monitoring, mitigating and appropriately managing
           systemic risks related to securities markets; and
       (ii) contributing to processes in relation to other financial markets.
   (b) Is there a clear definition of systemic risk within the jurisdiction?
2. Does the regulator have, or contribute to a regulatory process (which may be focused on the securities market or be cross-sectoral) through formalized arrangements to identify, monitor, mitigate and appropriately manage systemic risk, according to the complexity of the regulator’s market consistent with its mandate and authority?

3. 
   (a) Is there an effective information sharing framework in place with other regulators and supervisors within the jurisdiction covering systemic risks, which is supported by formal cooperation or institutional arrangements?
   
   (b) Does the regulator communicate information and data about identified systemic risk(s) with regulators in other jurisdictions under established procedures or arrangements and/or supported by bilateral and/or multilateral memoranda of understanding (MoUs)?

4. Does the regulator have appropriately skilled human and adequate technical resources to support effective risk arrangements?

Explanatory Notes

Disclosure and transparency are critical to identifying and understanding the development of systemic risk and arming regulators with the information needed to take the appropriate action. Transparency in markets and products is also crucial to allow market participants to better price risk. Regulators have a particular responsibility and interest in promoting transparency at the market level as well as adequate disclosure at the product and market participant level.

Regulators also have a particular responsibility for establishing organizational requirements, business conduct regulation and resolution regimes for market intermediaries, which are important elements in mitigating and managing systemic risk. Robust oversight of organizational requirements and business conduct is essential to managing the build-up of undesirable incentive structures which can become an important source of risk in the financial system.

Reducing systemic risk needs to be considered within the context of the regulator’s broader mandate. A number of other principles also contribute to the regulator’s efforts to identify, mitigate and manage systemic risk. These include, in particular, Principles relating to the perimeter of regulation (Principle 7), conflicts of interest (Principle 8), cooperation and information-sharing with other regulators (Principle 13–15), oversight of credit rating agencies (Principle 22), oversight of hedge funds and/or hedge funds managers and advisers (Principle 28), procedures for dealing with the failure of a market intermediary (Principle 32) and supervisory requirements of clearing and settlement (Principle 38).

When assessing Key Question 1, the key aspect is whether the regulator exercises a role, which does not necessarily have to be backed by legal framework, in relation to systemic risk.

When assessing Key Question 2, the assessor should consider whether the regulator has or contributes to a regulatory process (which may be focused on the securities market or be cross-sectoral) with respect to systemic risk posed by entities within the scope of its regulation (e.g., with respect to market intermediaries, hedge funds or central counterparties which are themselves systemically important in the relevant securities market).
Flexibility of approach and being open to new insights will be important as securities regulators learn more about systemic risk. The formalized arrangements referred in Key Question 2 would include general and systemic risk arrangements as indicated below.  

**General Arrangements.** The arrangements to identify, monitor, mitigate and adequately manage systemic risk should include components which:

- Entail a holistic and systematic analysis of entities, products, markets, market infrastructures and activities across securities markets that could be the source of systemic risk;
- Involve the systematic and robust analysis of accessible, reliable and good quality data (including micro- and macro-economic data and market intelligence) either collected by the securities regulator or sourced from other agencies or parties (including other relevant supervisors);
- Include mechanisms to assist in understanding the evolving functioning of securities markets;
- Involve engagement with market participants to better understand emerging risks, systemic and otherwise. This engagement may take the form of surveys, formal consultations, informal roundtables, individual meetings, etc.;
- Include documentation about the work performed in assessing potential systemic risks at each stage of the assessment process, and documentation about the status of steps taken to mitigate identified risks;
- Allow for periodic reassessment of procedures and outcomes; and
- Provide for policy and/or regulatory actions, where appropriate in the context of the regulatory mandate, based on the assessments conducted.

**Systemic Risk Arrangements.** These arrangements, in addition to the general arrangements set out above, should include components which:

- Provide a broad understanding of the financial markets environment in which securities regulators operate and on which assessments of systemic risk can be made. It should also take into account the interconnections between different products, markets, market infrastructures and activities across securities markets;
- Complement reviews undertaken by other relevant regulators, where appropriate, by incorporating analysis of the operation of securities markets and the interplay between various markets and participants; and
- Include the development and use of indicators to calibrate systemic risk emerging from (or affecting) securities markets.

---

**PRINCIPLES RELATING TO THE REGULATOR**

*Organizational Culture.* To achieve the above, securities regulators should build an organizational culture that supports and serves as a foundation to processes in relation to systemic risk. This would include:

- Furthering a culture for a methodological, collaborative and integrated approach within the regulator towards the identification, monitoring, mitigation and management of systemic risk;
- Promoting “professional scepticism” contributing to early identification of systemic risk; and
- Ensuring organizational awareness of the culture, frameworks and approaches for identification, monitoring, mitigation and management of systemic risk, and commitment to the effective and meaningful operation thereof.

**Benchmarks**

*Fully implemented*

Requires affirmative responses to all applicable Questions.

*Broadly implemented*

Inability to respond affirmatively to either Questions 1(b), 3(b) or 4.

*Partly Implemented*

Inability to respond affirmatively to either Question 1(a) or 3(a).

*Not Implemented*

Inability to respond affirmatively to Question 2.
Principle 7  The Regulator should have or contribute to a process to review the perimeter of regulation regularly.

Objective

Regular review of the perimeter of regulation promotes a regulatory framework that supports investor protection, fair, efficient and transparent markets, and the reduction of systemic risk.

Depending on the structure of the markets and the legal system that underpins them, not all market activities or market participants may be subject to direct regulation or oversight. The decision whether to regulate a specific product, market, market participant or activity is ultimately a policy judgment made by the relevant authorities in each jurisdiction based on an assessment (to which regulators should contribute) of the jurisdiction’s particular circumstances. Therefore, the regulator should have or contribute to a process to regularly review whether its current regulatory requirements and framework adequately address risks posed to investor protection, and to fair, efficient and transparent markets, as well as to the reduction of systemic risks.

A regular review of the perimeter of regulation will also consider the effectiveness of existing regulations and the need to modify them or adopt new regulations in light of new market developments. In particular, that review will need to address the risk of regulatory arbitrage arising from changes to the intensity of regulation across the financial sector.

The review of the regulatory perimeter should be integrated into securities regulators’ risk management frameworks through formalized processes and arrangements.

Principles 6 and 7 are interrelated in nature and similar processes might be applied by the regulator for both Principles 6 and 7. However, while Principle 6 has a particular focus on systemic risk and is limited to the regulator’s mandate, Principle 7 is broader in scope (including systemic risks and other risks) and is not limited to the regulator’s mandate.

Key Issues

1. The regulator should:

   (a) adopt or adapt its own process, or participate in a process with other regulators and/or government policy-makers, for conducting a regular review of products, markets, market participants and activities so as to identify and assess possible risks to investor protection and market fairness, efficiency and transparency or other risks to the financial system; and

   (b) have formalized arrangements and/or processes to regularly review the perimeter of regulation in order to promote the identification and assessment of these risks.
2. Such review should include consideration of:

(a) whether developments in products, markets, market participants and activities have an effect on the scope of securities regulation; and

(b) whether the policy approach underlying the existing statutory or discretionary exemptions, continues to be valid.

3. The process should focus on determining whether the regulator’s existing powers, operational structure, and regulations are sufficient to meet emerging risks.

4. The process should also allow for any changes to the existing perimeter of regulation to be made in a timely manner in response to an identified emerging risk. Such a necessary change may include the regulator seeking changes to legislation.

Key Questions

1. Does the regulator have or participate in a process, to identify and assess whether its regulatory requirements and framework adequately addresses risks posed by products, markets, market participants and activities to investor protection, fair, efficient and transparent markets and the reduction of systemic risk?

2. Does the regulator have formalized arrangement and/or a process to review, when there is evidence of changing circumstances, its past regulatory policy decisions on products, markets, entities, market participants or activities, especially decisions to exempt, and take measures as appropriate?

3. Does the regulator participate in a process (with other financial system supervisors and regulators if appropriate) which reviews unregulated products, markets, market participants and activities, including the potential for regulatory arbitrage, in order to promote investor protection and fair, efficient and transparent markets and reduce systemic risks?

4. Does the regulator seek legislative or other changes when it identifies a regulatory weakness or risk to investor protection, market fairness, efficiency, and transparency that requires legislative or other changes?

Explanatory Notes

Assessors should recognize that each regulator may have its own unique process in reviewing the perimeter of regulation and deference should be given to regulatory prerogative.

Examples of such processes could include:

- a team, group or division within the organization to identify risks, regulatory gaps or conflicts;
- the regulator being party to a formal or informal group of financial regulators that share information and discuss the regulatory perimeter;
PRINCIPLES RELATING TO THE REGULATOR

- *ad hoc* groups to identify and assess risks in response to a crisis or on a periodic basis; or
- other formal or informal means of surveying or assessing the perimeter of regulation.

The responsibilities of the securities regulator within jurisdictional arrangements to review the regulatory perimeter should be clear. These arrangements should allow for identification of risks posed by unregulated products, markets, market participants and activities, including those resulting from innovation and technology.40

These arrangements, in addition to the general arrangements set out in Principle 6 (Explanatory Notes), should include components which:

- involve securities regulators systematically identifying, prioritizing and determining the scale and scope of emerging risks from different entities, activities, markets and products in financial markets that could serve as the basis for deciding whether and what type of regulatory action or intervention is warranted;
- build on existing risk identification frameworks by requiring securities regulators to proactively go beyond existing regulatory boundaries to identify potential risks; and
- recognize that different approaches may be required to discern and assess different types of risks.

Further, securities regulators should also seek to build an organizational culture that supports and serves as a foundation to processes in relation to reviewing the regulatory perimeter. This would include:

- Furthering a culture for a methodological, collaborative and integrated approach within the regulator towards reviewing the regulatory perimeter; and
- Ensuring organizational awareness of the culture, frameworks and approaches for reviewing the regulatory perimeter and commitment to the effective and meaningful operation thereof.

When assessing implementation of this Principle, the assessor should consider particular instances where the perimeter of regulation has been reviewed. The assessor could, for example, consider if regulators have assessed whether current regulatory requirements and framework adequately address risks that may be posed by the use of financial benchmarks, for example, to investors or to fair, efficient and transparent markets.

**Benchmarks**

*Fully Implemented*

Requires affirmative responses to all applicable Questions.

*Broadly Implemented*

There is no *Broadly Implemented* rating for this Principle.

---

40 See Id.
PRINCIPLES RELATING TO THE REGULATOR

Partly Implemented

Inability to respond affirmatively to Questions 2 or 4.

Not Implemented

Inability to respond affirmatively to Question 1 or 3.
Principle 8  The Regulator should seek to ensure that conflicts of interest and misalignment of incentives are avoided, eliminated, disclosed or otherwise managed.

Objective

This Principle is an overarching Principle which sets out the role securities regulators should have in focusing on: conflicts of interest and the misalignment of incentives.

Conflicts of Interest

A recurring concern of securities regulators has to do with what economists call “agency problems”, where market participants entrusted to act in the interests of others use their position, power or information to advance their own interests instead.

Such conflicts of interest are common problems in many financial markets and are often the focus of securities regulation. They arise for a range of reasons including compensation programs in firms. Conflicts should be and are the focus of securities regulation because they can undermine investor protection and the fair, efficient and transparent operation of markets, or present a systemic risk. This focus on conflicts of interest is reflected in references to conflicts of interest in a number of Principles (i.e., 5, 9, 22, 23, 24, 28, 29, and 31).

Where conflicts of interest may exist that pit the interests of a market participant against those it has been entrusted to advance, the regulator should identify and assess the degree to which the conflicts exist and determine the degree to which regulation may be necessary to ensure the conflicts are avoided, eliminated, disclosed or otherwise managed.

Misalignment of Incentives in Securitization

This Principle also sets out the role the regulatory system should have where the incentives and interests of those engaged in bringing financial products to market are not aligned with the interests of investors.

This is a particular issue where different firms are responsible for the design, manufacture and distribution of a financial product (as is the case with asset-backed securities and other complex financial products). Even where each firm engaged in bringing a product to market avoids, eliminates, discloses or otherwise manages conflicts of interest with, and meets its obligations to, direct counterparties and clients, incentives may exist for it to act in a way which is not in the best interests of the end consumer or investor. Firms in these circumstances may owe no duty to the end consumer or investor but their actions may not always be in the interests of the end consumer or investor.

and managing direct conflicts of interest to their immediate client or counterparty, had no additional incentive to perform appropriate levels of due diligence on the asset pools backing the security or to employ robust underwriting standards. Originators and brokers may have focused on the origination of securitized products without due regard to longer term performance of the products encouraged by short-term incentive remuneration structures. The quality of the underlying assets suffered, resulting in diminished returns (and losses) to end investors.

Where a jurisdiction has an active securitization market and identifies that the incentives of investors and securitizers along the value chain (including the originator, issuer, sponsor, underwriter or other entities) are misaligned, the regulatory system should evaluate, formulate and implement approaches to align incentives, taking into account local market conditions. Where appropriate, these approaches might include mandating retention of risk in securitization products. The approach to incentive alignment should be disclosed for each transaction.

**Key Issues**

**Conflicts of Interest**

1. The regulator should identify and evaluate potential and actual conflicts of interests regarding regulated entities.
2. The regulator should take steps so that conflicts of interest among regulated entities are avoided, eliminated, disclosed or otherwise managed. Disclosure of potential or actual conflicts of interests should be made to or accessible by investors and/or other users of the services or products.

**Misalignment of Incentives in Securitization**

3. For jurisdictions with active securitization markets, the regulatory system should evaluate, formulate and implement approaches to aligning incentives, including where appropriate, through mandating retention of risk in securitization products.
4. The regulatory system should require that the method chosen for compliance with the incentive alignment approach, including any mandated risk retention requirements, is clearly disclosed.

**Key Questions**

**Conflicts of Interest**

1. Does the regulator have in place a process designed to identify and evaluate potential and actual conflicts of interest regarding regulated entities?
2. Where the regulator identifies significant conflicts of interest among regulated entities, does it take steps so that these conflicts of interest are avoided, eliminated, disclosed or otherwise managed?

---

42 Id, p. 16, paras. 52–53.
3. Where the regulator requires conflicts of interest to be disclosed, are the disclosures mandated in such a way that they are accessible by investors and/or the users of the services or products?

**Misalignment of Incentives in Securitization**

4. In jurisdictions with active securitization markets, has the regulatory system evaluated, formulated and implemented approaches to align incentives, including mandatory risk retention, wherever appropriate, taking into account local market conditions?

5. Does the regulatory system require that the method chosen for compliance with the incentive alignment approach, including any mandated risk retention requirements, is clearly disclosed?

**Explanatory Note**

Decisions on which regulatory tools to use to address particular conflicts of interest among regulated entities (e.g., prohibitions, disclosures, use of information barriers, etc.) will necessarily entail policy decisions reflecting legal and market structures and regulatory philosophies. The critical issue from an assessment perspective is that the process by which the regulator monitors conflicts of interest in the market may affect investor protection and market fairness, efficiency and transparency, or pose a systemic risk.

Examples of conflicts of interest and misaligned incentives commonly highlighted in past financial crises involve:

- mortgage brokers hired by financial institutions to assess the quality of loan applications but who were compensated based on the volume and size of applications processed (giving rise to an incentive to exaggerate the quality of the loan applications);
- credit rating agencies hired by issuers, arrangers and/or investors to publicly or widely opine on the credit-worthiness of a security in which the issuer, arranger or investor has an interest (and, therefore, a willingness to compensate the credit rating agency according to whether the rating aligns with the issuer's, arranger's or investor's interest); and
- the judgment of audit firms being affected by the provision of non-audit services to audit clients.

Not all of the entities are always regulated by securities regulators, and these above examples should not be read as conflicts of interest or misaligned incentives that all regulators should seek to address, unless noted in other Principles. For example, mortgage brokers often fall under banking regulation. However, securities regulators should work together with other relevant regulators so as to formulate consistent approaches to address identified misaligned incentives.

Examples of approaches where the regulator has identified, evaluated and taken steps to avoid conflicts of interests and the misalignment of incentives in areas highlighted in the 2008 crisis might include:

- imposing risk retention requirements for originators, sponsors, original lenders and/or issuers of securitized products; or
PRINCIPLES RELATING TO THE REGULATOR

- requiring the independence of service providers engaged by, or on behalf of, an issuer, where an opinion or service provided by those service providers may influence an investor’s decision to acquire a securitized product.

Securitization market participants and their activities might be regulated by securities regulators and other relevant regulators. In assessing implementation of this Principle, the assessor should consider all relevant parts of the regulatory framework (including requirements which might be imposed by non-securities regulators).

The most common example of how misaligned incentives could be addressed in the securitization value chain is to require risk retention. Risk retention or “skin in the game” requirements have been a key focus of regulatory responses since the crisis. These requirements have been and are being developed as a means of addressing misaligned incentives that may be embedded in the “originate to distribute” model of some securitization products with a view to encouraging prudent behaviour by issuers and sponsors. Where risk retention is mandated, the applicable legislation, regulation and/or policy guidance should address the following elements:

- the party on which obligations are imposed (i.e. direct and/or indirect regime, based on an assessment of the most efficient and effective way of achieving risk retention);
- permitted forms of risk retention requirements (e.g. vertical, horizontal, etc.);
- exceptions or exemptions from the risk retention requirements.

Market circumstances may, however, warrant other approaches being taken.

Benchmarks

Fully Implemented

Requires affirmative responses to all applicable Questions.

Broadly Implemented

Requires affirmative responses to all Questions except Questions 3 and 5.

Partly Implemented

There is no Partly Implemented rating for this Principle.

Not Implemented

Inability to respond affirmatively to Questions 1, 2, or 4.

<table>

B. **PRINCIPLE RELATING TO SELF-REGULATION**

1. **Preamble**

Self-Regulatory Organizations (SROs) can be a valuable complement to the regulator in achieving the objectives of securities regulation.

Various models of self-regulation exist and the extent to which self-regulation is used varies. The common characteristics of SROs in most jurisdictions are a separation from the regulator (although government oversight and authorization generally exist), and the participation of business, industry and, if appropriate, investors in the operations of the SRO.

There can be substantial benefits from self-regulation:

- SROs may require the observance of ethical and business conduct standards which go beyond government regulations.
- SROs may have broader ability to compel the production of information than government regulators.
- SROs may offer considerable depth and expertise regarding market operations and practices, and may be able to respond more quickly and flexibly than the government authority to changing market conditions.
- SROs often build and maintain technology infrastructure to undertake their own, and the regulator’s regulatory functions, with this infrastructure being funded entirely by regulated persons, not taxpayers.

SROs should undertake those regulatory responsibilities which they have expertise to perform most efficiently. The actions of SROs will often be limited by applicable contracts and rules.

2. **Scope**

This Principle applies if an entity has one or several of the key features of an SRO. The understanding of what constitutes an SRO is further specified in the following guidance. Self-regulation may encompass the authority to create, amend, implement and enforce rules of trading, business conduct and/or qualification regimes with respect to the persons (i.e. legal and natural persons) subject to the SRO’s jurisdiction and to resolve disputes through arbitration or other appropriate dispute resolution mechanisms. This authority may be derived from a statutory delegation of power to a non-governmental entity or through a contract between an SRO and its members as is authorized or recognized by the regulator. In some jurisdictions, SROs may not cover all the functions mentioned above.

An organization should be classified as an SRO (and subject to assessment under Principle 9) if it has been given the power or responsibility to regulate and its rules are subject to meaningful sanctions regarding any part of the securities market or industry. One typical feature of an SRO is that the organization establishes rules relevant for a certain industry, e.g. on eligibility of individuals/firms, on (market) conduct or qualifications of staff or disciplinary rules which could trigger sanctions in case of infringements. Another typical feature of SROs is that the organization also enforces such rules.
In summary, SROs are organizations that:

- Establish rules of eligibility that must be satisfied in order for individuals or firms to participate in any significant securities activity or
- Establish and enforce binding rules of trading, business conduct and qualification for individuals and/or firms engaging in securities activities or
- Establish disciplinary rules and/or conduct disciplinary proceedings, which would enable the SRO to impose appropriate sanctions for non-compliance of its rules.

If self-regulation is used, the SRO should be subject to appropriate oversight by the regulator.
3. **Principle 9**

| Principle 9 | Where the regulatory system makes use of Self-Regulatory Organizations (SROs) that exercise some direct oversight responsibility for their respective areas of competence, such SROs should be subject to the oversight of the Regulator and should observe standards of fairness and confidentiality when exercising powers and delegated responsibilities. |

The Principles recognize the value that a properly regulated SRO can play and set out general recommendations for the proper authorization and oversight of SROs. However, the use of SROs is a discretionary policy option and, therefore, the absence of SROs in a jurisdiction should have no assessment implication.

The “appropriate use” of an SRO is related to:

1. The SRO’s capacity to carry out the purposes of relevant governing laws, regulations, including the development and implementation of SRO rules as well as the monitoring and enforcement of compliance by its members and associated persons with those laws, regulations and rules as reflected in the SRO’s regulatory authorization requirements and oversight program.

2. The adequacy of the regulator’s oversight.

3. The augmentation of regulatory resources by utilizing the SRO’s expertise, its proximity to the market and its flexibility in addressing issues that arise in the changing market environment.

4. Adequate standards of corporate governance, to effectively manage the conflicts of interest inherent to the activity of self-regulation.

“Inappropriate use” of an SRO by extension might include the exercise of SRO functions by an unauthorized entity or without regulatory oversight, designation of private sector institutions that demonstrate an insufficient capability to meet standards of authorization, delegation or enforcement to perform SRO functions, evidence of misuse of quasi-governmental powers, or insufficient performance of the functions of self-regulation.

The regulator should require an SRO to meet appropriate standards before allowing the organization to exercise its authority. These standards must include, *inter alia*, the ability to:

- Enact rules that prohibit fraudulent and manipulative practices.
- Maintain the organization and capacity to monitor compliance and have a disciplinary mechanism to enforce rules, *inter alia*, expulsion; suspension; limitation of activities, functions, and operations; fine; censure and suspend or bar.

Oversight of the SRO should be ongoing.

Moreover, once the SRO is operating, the regulator should assure itself that the exercise of this power is in the public interest and protects investors, and results in fair, effective and consistent enforcement of applicable securities laws, regulations and appropriate SRO rules.
The effectiveness of an SRO may be compromised by conflicts of interest. The regulator should monitor and address the potential that may arise for conflicts of interest. The regulator must ensure that no conflicts of interest arise because of the SRO’s access to valuable information about market participants (whether or not they are members of the SRO itself). The risk of conflicts arising may be acute when the SRO (e.g., an exchange) is responsible both for the supervision of its members and the regulation of a market sector.

Regardless of the extent to which self-regulation is used, the regulator should retain the authority to inquire into matters affecting investors or the market. Where the powers of an SRO are inadequate for inquiring into or addressing particular misconduct or where a conflict of interest necessitates it, the regulator should take over the responsibility for an inquiry from an SRO. It is important, therefore, to ensure that the information provided by the SRO to the regulator allows these matters to be identified at an early stage.

SROs should follow similar professional standards of behaviour on matters such as confidentiality and procedural fairness as would be expected of the regulator.\(^{44}\)

In assessing this Principle, the assessor should consider whether an SRO’s powers and levels of oversight are consistent with its functions and responsibilities. Like a regulatory authority, an SRO’s processes should be fair and consistent; its decisions should be subject to regulatory review; it should protect the confidentiality of its data; and it is the professional responsibility of its staff that their conduct should be similar to that expected of regulator staff. The regulator should have full authority to oversee effectively any SRO.

**Key Issues**

*Authorization*

1. As a condition of authorization, the legislation or the regulator should require an SRO to demonstrate that it:
   
   (a) Has the capacity to carry out the purposes of relevant governing laws, regulations and SRO rules and to enforce compliance by its members and associated persons subject to those laws, regulations, and rules.
   
   (b) Treats all members of the SRO and applicants for membership in a fair and consistent manner.
   
   (c) Develops rules that are designed to set standards of behaviour for its members and to promote investor protection and market integrity.
   
   (d) Submits to the regulator its rules for review and/or approval, as the regulator deems appropriate, and ensures that the rules of the SRO are consistent with the public policy requirements established by the regulator.
   
   (e) Cooperates with the regulator and other SROs to investigate and enforce applicable laws and regulations.

---

\(^{44}\) SROs are generally non-governmental agencies and so will not always be subject to the same standards as apply to a government agency.
2. The SRO should have:
   (a) statutory delegation or other formal recognition from the regulator; and
   (b) MoUs or other arrangements in place to secure cooperation between it and the regulator.

3. Its own rules which are enforced and whose non-compliance is appropriately sanctioned.

4. It should also:
   (a) Assure a fair representation of members in selection of its directors and administration of its affairs.
   (b) Avoid rules that may create anti-competitive situations.
   (c) Avoid using the oversight role to allow any market participant unfairly to gain advantage in the market.

**Oversight**

5. Oversight should be ongoing to ensure that:
   (a) An SRO meets the conditions of its authorization on an ongoing basis.
   (b) The government regulator retains the authority to inquire into matters affecting investors or the market.
   (c) Where the powers of an SRO are inadequate to investigate, or otherwise to address, alleged misconduct or where the SRO has a conflict of interest that cannot be appropriately managed, the regulator conducts any necessary investigation rather than the SRO.
   (d) An SRO provides information to the regulator that allows matters requiring regulatory intervention to be identified at an early stage.

**Professional Standards**

6. The SRO should adopt standards of confidentiality for its staff and standards of procedural fairness applicable to its members comparable to those for the regulator.

**Conflicts of Interest**

7. The SRO should have procedures in place to address potential conflicts of interest.
**Key Questions**

*Authorization or Delegation subject to Oversight*

1. As a condition to authorization, does the legislation or the regulator require the SRO to demonstrate that it: 45
   
   (a) Has the capacity to carry out the purposes of its governing laws, regulations and SRO rules consistent with the responsibility of the SRO, and to enforce compliance by its members and associated persons subject to its laws, regulations and rules?

   (b) Treats all members of the SRO, applicants for membership and similarly situated market participants subject to its rules in a fair and consistent manner?

   (c) Develops rules that are designed to set standards for its members and to promote investor protection?

   (d) Submits to the regulator its rules and any amendments thereto, for review and/or approval, as the regulator deems appropriate, and ensures that the rules of the SRO are consistent with the public policy requirements established by the regulator?

   (e) Cooperates with the regulator and other domestic SROs to investigate and enforce applicable laws, regulations and rules?

2. Does the SRO:
   
   (a) Have statutory delegation or other formal recognition from the regulator?

   (b) Have MoUs or other arrangements in place to secure cooperation between it and the regulator?

   (c) Have its own rules which are enforced and whose non-compliance is appropriately sanctioned?

   (d) Where applicable, e.g., a mutualized organization, assures a fair representation of members in selection of its board of directors and administration of its affairs?

   (e) Avoid rules that may create anti-competitive situations as defined in the Explanatory Note?

   (f) Avoid using the oversight role to allow any market participant unfairly to gain an advantage in the market?

---

45 In the case of a newly operational SRO, the applicant should demonstrate that it has programs and procedures in place to meet the conditions of authorization, and ongoing and effective execution of such programs or procedures should be considered a condition of authorization.
PRINCIPLE RELATING TO SELF-REGULATION

Oversight

3. Does the regulator:
   (a) Have in place an effective ongoing oversight program of the SRO, which may include:
       (i) inspection of the SRO;
       (ii) periodic reviews;
       (iii) reporting requirements;
       (iv) review and revocation of SRO governing laws, regulations, and rules; and
       (v) the monitoring of continuing compliance with the conditions of authorization or delegation.
   (b) Retain full authority to inquire into matters affecting the investors or the market?
   (c) Take over or support an SRO’s responsibilities where the powers of an SRO are inadequate for inquiring into or addressing particular misconduct or allegations of misconduct or where a conflict of interest necessitates it?

Professional Standards similar to those Expected of a Regulator

4. Does the regulator, the law or other applicable regulation require the SRO to follow similar professional standards of behaviour as would be expected of a regulator:
   (a) On matters relating to confidentiality and procedural fairness?
   (b) On the appropriate use of information obtained in the course of the SRO’s exercise of its powers and discharge of its responsibilities?

Conflicts of Interest

5. Does the regulator, the law or other applicable regulation assure that potential conflicts of interest at the SRO are avoided or appropriately managed?

Explanatory Notes

Use of properly overseen SROs can expand regulatory resources in financial markets.46

The level and extent of regulatory oversight and the types of necessary powers and protections may be affected by the structure of the SRO. For example, there may be more concern for conflicts of interest, or appropriate use of self-regulatory resources, in the case of for-profit, demutualized markets. Furthermore, in some markets, certain very specific functions are delegated to the SRO and others are not. Assessors must sensibly apply the Benchmarks in

---

46 See also Principle 3.
this case, only requiring oversight of the functions performed and not testing powers or attributes not performed by the SRO. In addition, if an entity performs certain SRO functions, for example an exchange, those SRO functions should be tested against Principle 9 as applicable even though the exchange is authorized under Principle 33. If, under consideration of the criteria in the scope section, an SRO-function is performed, this activity will be captured by Principle 9. The assessments for Principle 33 and Principle 9 in this case should be consistent. Reference also may be made to other relevant Principles for testing the adequacy of performance of regulatory functions by SROs where such functions are delegated to the SRO.

Anti-competitive situations may include situations where the SRO acts in an exclusionary, unfair or inequitable manner when governing access to the SRO, or when taking action with respect to the enforcement, or promulgation or interpretation, of SRO rules and procedures in a way that is not fair and equitable to similarly situated market participants. Among other things, regulatory oversight should be directed to the SRO undertaking its responsibilities in a way that unreasonably prevents access to the market or that unreasonably creates barriers to entry in the business of providing investment services that are unrelated to oversight of the market or prudential concerns.

SROs that are public companies also should be subject to the governance provisions applicable to other issuers. See Principles 16 through 18.

**Benchmarks**

*Fully Implemented*

Requires affirmative responses to all applicable Questions.

*Broadly Implemented*

Requires affirmative responses to all applicable Questions except, in the case of Questions 2(d) and 2(e), the regulator does not have the power to require that the SRO:

(a) assures a fair representation of members in the selection of its board of directors and the administration of its affairs; or

(b) avoids rules that may create anti-competitive situations;

provided that the SRO has relevant rules and procedures and/or there is a general law that addresses these issues and there is not a record of substantial complaint.

*Partly Implemented*

Requires affirmative responses to all applicable Questions except to Questions 2(d), 2(e) and 5, provided that in the case of Question 5, the regulator can take over actions undertaken by the SRO where these matters are at risk and there is no evidence of obvious abuses.

Additionally, although the SRO may not have the power to assist in investigation of compliance with applicable laws and regulations, the regulator requires the SRO, as a condition of authorization and on an ongoing basis, to make all relevant information available to the regulator in regard to Question 1(e).
**Not Implemented**

Inability to demonstrate that the regulator can require an SRO to meet standards, or failure to respond affirmatively to one or more of Questions 1(a), 1(b), 1(c), 1(d), 2(c), 2(f), 3(a), 3(b), 3(c), 4(a) or 4(b) or to Questions 1(e) or 5, absent the qualifications under *Partly Implemented*, and/or a finding that the exercise of SRO functions in practice occurs without oversight or there is demonstrable evidence of abuse or insufficient performance of SRO functions.

C. PRINCIPLES RELATING TO ENFORCEMENT

1. Preamble

Strong and rigorous enforcement of securities laws is fundamental to help foster investor confidence and maintain fair and efficient markets. Under the Principles, the term “enforcement” should be interpreted broadly enough to encompass powers of inspection, investigation and surveillance such that the regulator should be expected to have the ability, the means, and a variety of measures to detect, deter, enforce, sanction, redress and correct violations of securities laws.

Broadly interpreted, “enforcement” can be considered to take place across a continuum that includes a range of activities and processes, such as:

- routine, risk-based and *ad hoc* inspections of regulated entities, including collecting information from regulated entities necessary to establish and assess compliance, and inspections prompted by tips and complaints from investors;
- surveillance of trading on organized platforms and gathering market intelligence more generally;
- investigations in respect of regulated or unregulated entities, which may be prompted by suspicion of misconduct; and
- taking action against non-compliance and misconduct, which may include enforcement proceedings and seeking appropriate remedies and sanctions.

This list is not intended to be prescriptive or exhaustive. Different regulators will have differing values, goals and legal systems underlying their enforcement programs. Accordingly, not all of the activities and processes described above will be relevant to all regulators.

While Principles 10 and 11 are intended to establish the nature and extent of the regulator’s powers, Principle 12 is designed to measure the ability of the regulator to use these powers, and how effectively and credibly it exercises them. Together they seek to determine a regulator’s ability to monitor the entities subject to its supervision, to collect information on a routine and *ad hoc* basis, and to take enforcement action or otherwise effect corrective action by regulated entities to ensure that persons and entities comply with relevant securities laws or are sanctioned for non-compliance.

The assessment under these Principles requires a careful consideration of the legal system in which the regulator operates. The Principles contemplate both civil law and common law systems and do not prescribe any specific enforcement model to be followed. There are several enforcement models that have been shown to be effective. These include models in which enforcement responsibilities are shared between several government or quasi-government agencies, or in which responsibilities are shared with SROs.

It is important that not only are the legal mechanisms in place for ensuring inspection, investigation, surveillance and enforcement powers, but that the authority has the ability to carry out effective programs in each of these areas. This includes ensuring that adequate resources are devoted to enforcement because only through effective enforcement will regulators most effectively deter future misconduct. Enforcement of securities regulatory requirements across the range of entities and products in the capital markets is also of key importance. Principles 10, 11 and 12 are therefore highly interrelated with the specific regulatory functions and responsibilities described under the Principles for Issuers, Collective Investment Schemes, Market Intermediaries and Secondary and Other Markets. Assessors...
should ensure that the evaluation of Principles 10, 11 and 12 is consistent with the assessments of the other Principles from an enforcement perspective in the assessed jurisdiction.

Under this framework, these Principles are relevant to the work of the regulator on the basis that they ensure the appropriate performance of the regulator’s functions and the effective exercise of its enforcement and supervisory powers.

2. **Scope**

Mechanisms for ensuring enforcement of securities laws should be in force in all jurisdictions. It is not necessary, however, that the responsibility for all aspects of enforcement of securities laws be given to a single body.

Where enforcement is undertaken by an authority other than the regulator, or where enforcement is shared between the regulator and another authority, cooperation among such bodies is critical and the ability to do so in a timely and effective manner should be particularly scrutinized.
### Principle 10

**The Regulator should have comprehensive inspection, investigation and surveillance powers.**

Principle 10 is designed to address whether a regulator has comprehensive powers to conduct inspections, investigations, and surveillance in relation to *regulated entities* in order to monitor and assess compliance with relevant securities laws. It covers the circumstances where, and methods by which, the regulator may obtain information from regulated entities. Principle 10 also addresses the regulator’s authority to conduct ongoing oversight and supervision of regulated entities as a preventative measure.

The concept of inspection generally includes the routine activities that a regulator may undertake in overseeing and supervising regulated entities in order to monitor compliance with regulatory requirements, detect and deter non-compliance, and identify risks and potential issues. These activities may vary among jurisdictions, and may include reviews of books, records, continuous disclosure and other regulatory filings and other information in response to an inquiry or as part of a reporting cycle. They may also include on-site inspection or desk-based reviews. For powers of inspection to be meaningful, regulated entities should be required to make and keep records of their transactions and activities. The regulator should also have the power to carry out inspections of regulated entities on their premises without prior notice, when it believes it is appropriate to verify compliance with regulatory requirements.

The suspicion of a breach of law should not be necessary to enable the regulator to require information from or conduct inspections of regulated entities. A regulator may choose to determine when and how often to conduct routine or more focused inspections of particular regulated entities by fixing a schedule, considering risk assessments and/or using other risk-based methods to set inspection priorities.

The concept of investigation generally includes activities that the regulator may undertake to obtain information, records or statements. An investigation may be prompted by findings from an inspection, or by suspicion of a breach of securities law, with a view to determining if further enforcement proceedings should be commenced.

Powers of inspection and investigation may be supported with the ability of the regulator or other competent authority to take actions to ensure compliance with these powers, for example, by seeking a court or judicial order to enforce the request to provide information to the regulator.

The main focus of surveillance is usually on monitoring trading activity of listed securities on authorized exchanges and regulated trading platforms. However, surveillance can take different forms and be conducted using a range of tools and technologies. The regulator should take advantage of the forms of surveillance that it considers appropriate for its market, which may expand to include tracing connections and conducting more targeted monitoring of particular persons subject to a regulator’s supervision (for example, individuals associated with past misconduct) and having systems in place to alert the regulator when unusual or suspicious trading patterns occur so that further inspections and investigations can take place.

In circumstances where inspection, investigation, surveillance or other regulatory enforcement authority has been delegated to or is otherwise exercised by third parties, regulators should maintain some level of oversight or involvement in order to avoid undue gaps.
PRINCIPLES RELATING TO ENFORCEMENT

Key Issues

1. The regulator should have the power to require the provision of information in the ordinary course of business, in response to an inquiry or as part of a reporting cycle, or to carry out inspections of regulated entities’ business operations whenever it believes it is appropriate to verify compliance with relevant standards.

   (a) The suspicion of a breach of law should not be necessary to enable the regulator to conduct inspections or require information of regulated entities.

   (b) The regulator should be able to conduct on-site inspections of regulated entities.

2. The regulator should be able to require the provision of all information reasonably needed to examine compliance with relevant standards, including books, records, documents, communications and statements.

3. The regulator should have the power to conduct or supervise surveillance of trading activity on its authorized exchanges and regulated trading platforms.

4. Where regulatory enforcement responsibilities are delegated to a third party, including an SRO, the third party should be subject to disclosure and confidentiality requirements that are as stringent as those applicable to the regulator.

Key Questions

1. Does the regulator have the power to inspect a regulated entity’s business operations, including its books and records:

   (a) Without giving prior notice?

   (b) On-site?

2. Does the regulator have the power to obtain books and records and request data or information from regulated entities without judicial action, even in the absence of suspected misconduct:

   (a) In response to a particular inquiry?

   (b) On a routine basis?

49 “Regulated entity” includes authorized or licensed entities or persons. These regulated entities remain accountable to the regulator for any delegated activity.
3. Does the regulator have the power to conduct or supervise surveillance of trading activity on its authorized exchanges and regulated trading platforms?

4. Does the regulatory system have recordkeeping and record retention requirements for regulated entities?^{50}

5. Are regulated entities required:^{51}
   (a) To maintain records concerning client identity?^{52}
   (b) To maintain records that permit tracing of funds and securities in and out of brokerage and bank accounts related to securities transactions?

6. Does the regulator have the authority to determine or have access to the identity of all clients of regulated entities?^{53}

7. Where a regulator^{54} outsources or otherwise grants, or where legislation grants, inspection or other regulatory enforcement authority to a third party, including an SRO:
   (a) Does the regulator supervise the outsourced functions of the third party?
   (b) Does the regulator have full access to information maintained or obtained by the third party?
   (c) Can the regulator cause changes/improvements to be made in the third parties’ processes?
   (d) Is the third party subject to disclosure and confidentiality requirements that are no less stringent than those applicable to the regulator?

Explanatory Notes

Full access to information maintained or obtained by the third party includes access to information being outsourced by the third party, taking into account that the SRO might use some outsourced services for its surveillance and inspection activities.^{55}

---

^{50} The FAQs to the IOSCO MMoU consider five years as the norm for maintenance of records (see FAQ #41). See also, Principles 29–32 for Market Intermediaries.

^{51} Key Question 4 is testing if a jurisdiction does have record keeping requirements and if there are retention requirements for those records for regulated entities. Key Question 5 is testing if a jurisdiction has specific categories of documents that should be maintained by regulated entities. These requirements can be found in securities, banking, anti-money laundering or other laws of the jurisdiction and assessors should review all relevant laws of the jurisdiction for these requirements.

^{53} See Principles on Client Identification and Beneficial Ownership for the Securities Industry, supra.

^{54} In the case of an SRO, the regulator should have these powers as a condition of continuing authorization. See Principle 9. For this question, see generally Outsourcing in Financial Services, supra.

^{55} This footnote refers to Key Question 7(b).
PRINCIPLES RELATING TO ENFORCEMENT

Benchmarks

Fully Implemented
Requires affirmative responses to all applicable Questions.

Broadly Implemented
Requires affirmative responses to all applicable Questions, except to Question 7(c).

Partly Implemented
Requires affirmative responses to all applicable Questions, except to Questions 7(c) and 7(d).

Not Implemented
Inability to respond affirmatively to one or more of Questions 1(a), 1(b), 2(a), 2(b), 3, 4, 5(a), 5(b), 6, 7(a) or 7(b).
While Principle 10 is limited to regulated entities, Principle 11 is intended to have wider application to also include unregulated entities. Principle 11 deals with courses of action, including investigations and proceedings, available to the regulator where a breach of relevant securities laws by any person is suspected or identified.\(^\text{56}\)

The regulator or other competent authority should, therefore, be provided with comprehensive investigatory and enforcement powers. Such powers may vary from jurisdiction to jurisdiction and, for example, may include the powers described in the preamble to Principle 10, as well as the power to:

- obtain information, records and statements from any entity or any persons involved (whether regulated or unregulated), directly or indirectly, or who may possess information relevant to an investigation;
- commence actions and lay charges against persons suspected of misconduct or breach of securities laws, and/or seek orders from courts or tribunals and/or to refer matters for civil and/or criminal actions;
- seek or impose a range of effective, proportional and dissuasive administrative sanctions where a breach is found, and to seek to enforce such sanctions where necessary;
- make or seek temporary orders (for example, the suspension of trading) while an investigation is, or proceedings are, taking place against the person suspected of breaching securities laws;
- compel the attendance, statement or testimony of individuals or representatives of entities who have been charged or asked to provide evidence;
- allow for outcomes arrived at through alternative resolution mechanisms (for example, through settlement, mediation or arbitration processes that may or may not be binding on parties);
- appeal decisions and/or allow for appeals to be made.

It is not necessary that the responsibility for all aspects of enforcement of the securities law be given to a single body. There are several enforcement models that have been shown to be effective. These include models in which enforcement responsibilities are shared between several government or quasi-government agencies or in which responsibilities are shared with SROs.

The international nature of securities markets and the fact that, frequently, misconduct may occur across several jurisdictions give rise to a number of particular issues.

---

Legislation and the enforcement powers of the regulator should be sufficient to ensure that it can be effective in cases of cross-border misconduct.

Details about the powers that an enforcement authority should have are described more specifically in the IOSCO Multilateral Memorandum of Understanding concerning Consultation and Cooperation and the Exchange of Information (the “IOSCO MMoU”).57

The general topic of international cooperation and its importance to effective regulation is addressed in the Principles relating to Cooperation.

Key Issues

1. The regulator or other competent authority should have comprehensive investigative and enforcement powers including the power: to seek court or judicial orders, or to take action to enforce regulatory, administrative, or investigative requirements or decisions; or to seek or impose effective sanctions; or to initiate criminal proceedings or refer matters to the criminal authorities.

2. The regulator or other competent authority should be able to obtain data, information, documents, books and records, and to take at least voluntary statements or testimony from any person, including third party entities and individuals (whether regulated or unregulated), that are either involved in relevant conduct or who may have information relevant to a regulatory or enforcement inquiry/investigation.

3. Enforcement powers should not compromise private rights of action. Private persons should be able to seek their own remedies (including, for example, for compensation, damages or specific performance of an obligation).

4. Where the exercise of enforcement powers requires the action of more than one regulator or other competent authority, prompt cooperation, including information sharing between them, should be possible for investigative and enforcement purposes.58

Key Questions

1. Does the regulator or other competent authority have the investigative and enforcement power to enforce compliance with the laws and regulations relating to securities activities?

2. Does the regulator or other competent authority have the following powers:
   (a) Power to seek court or judicial orders, to refer matters for civil proceedings or to take other action to ensure compliance with regulatory, administrative, and investigative requirements or decisions?
   (b) Power to impose effective, proportionate and dissuasive administrative sanctions?59

57 See Article 7 of the IOSCO MMoU, supra.
58 Principles 1 and 13.
59 Principle 10, Key Questions. See also the Resolution on Record Keeping, supra.
(c) Power to initiate criminal proceedings or to refer matters for criminal prosecution?

(d) Power to order the suspension of trading in securities or to take other appropriate actions?60

3. Does the regulator or other competent authority have the investigative and enforcement power to require and to obtain from any person, including third party entities and individuals (whether regulated or unregulated), that are either involved in relevant conduct or who may have information relevant to a regulatory or enforcement inquiry/investigation:61

(a) Contemporaneous records sufficient to reconstruct all securities and derivatives transactions, including records of all funds and assets transferred into and out of bank and brokerage accounts relating to those transactions?

(b) Records for securities and derivatives transactions that identify:
   (i) The client:
      (1) Name of the account holder?
      (2) Person authorized to transact business?
   (ii) The amount purchased or sold?
   (iii) The time of the transaction?
   (iv) The price of the transaction?
   (v) The individual and the bank or broker and brokerage house that handled the transaction?

(c) Information located in its jurisdiction identifying persons who beneficially own or control non-natural persons organized in its jurisdiction?

(d) Statements or testimony?62

(e) Any other information including documents and bank records?

4. Can private persons seek their own remedies for misconduct relating to the securities laws?63

---

60 Other actions include the imposition of trading restrictions or requirements on individual market participants, e.g., position limits, reporting requirements, liquidation-only trading, special margin requirements or other corrective actions. Some jurisdictions also can seek compensatory remedies. The specific actions listed in Key Question 2(d), and in this footnote, are exemplary and are not necessary to receive a Fully Implemented assessment provided the regulator can demonstrate that available sanctions are proportionate, dissuasive and effective.

61 Resolution on Record Keeping, supra and the IOSCO MMoU, supra. This question may be answered in the affirmative if one competent authority has the authority to share all required information, including information originally in the possession of another competent domestic authority, with its foreign counterpart. See also Principle 10 and Principle 13, Key Question 1.

62 A regulator should be enabled to obtain at least voluntary statements.

63 Such actions need not be taken directly under the securities laws, but could be under provisions within the general law.
PRINCIPLES RELATING TO ENFORCEMENT

5. Where an authority other than the regulator must take enforcement or other corrective action, can the regulator share information obtained through its regulatory or investigation activities with that authority?

6. Where the regulator is unable to obtain information in its jurisdiction necessary to an investigation is there another authority that can obtain the information?  

7. If yes: Are there respective arrangements between the regulator and the other domestic authority with regard to the respective exchange of information in place?  

Explanatory Notes

The assessor must determine how the jurisdiction’s enforcement program is designed to use the powers accorded. The sufficiency of the powers may depend on the ability to demonstrate that they are exercised effectively. The scope of the investigative and enforcement powers conferred on the regulator and/or on other authorities, including public prosecuting authorities, depends on the conduct under investigation and the legal system applicable in the jurisdiction. The assessor should inquire whether the system, as such, is able effectively to detect, investigate and prosecute violations of the securities laws.

Regulators and other competent authorities should recognize in applying their investigative and enforcement powers that securities fraud or other securities misconduct often takes unusual, complex or new forms. They should be prepared to apply their laws to such unusual forms of fraud and to contribute actively to develop their respective legislation, and surveillance/inspection and investigation methodologies, where necessary.

The assessor also should inquire of the regulatory authority as to its view of the adequacy of available sanctioning powers and powers to take corrective action.

Examples of measures used to enforce securities regulatory requirements and to deter and sanction securities violations include: fines; disqualification; suspension and revocation of authority to do business; injunctions or cease and desist orders, directly or through court order; asset freezes, directly or through court order; action against unlicensed persons in conducting securities transactions or referral of such activities to the criminal authorities; measures to enforce disclosure and financial reporting requirements for issuers; measures to enforce conduct of business, capital requirements and other prudential rules; and measures to enforce recordkeeping and reporting by market intermediaries, operators of authorized exchanges, regulated trading systems and collective investment schemes, and other regulated securities entities.

Such sanctions are examples only and the regulator must demonstrate that there is a spectrum of sanctions available that are proportionate, dissuasive, effective, and sufficient to cover the spectrum of securities' violations.

---

64 See Principle 15, Key Question 8.
65 A respective arrangement could be an undertaking or an MOU.
66 Principle 12.
67 “Enforcement program” may be broadly understood as all the measures that are taken by a regulator in order to use the powers it has.
68 An example of a measure to enforce reporting requirements would be the power to require an amended financial report or disclosure statement.
PRINCIPLES RELATING TO ENFORCEMENT

Benchmarks

Fully Implemented

Requires affirmative responses to all applicable Questions and, where cooperation among another authority and the regulator is necessary to take action, that such action is responsive to the priorities of the securities regulator and timely.

Broadly Implemented

There is no Broadly Implemented rating for this Principle.69

Partly Implemented

Requires affirmative responses to all applicable Questions except to Question 4.

Not Implemented

Inability to withdraw or suspend a licence, or inability to respond affirmatively to one or more of Question 1, 2(a), 2(b), 2(c), 2(d), 3(a), 3(b), 3(c), 3(d), 3(e), 5, 6, or 7 or demonstrated failures in cooperation arrangements.

---

69 Nevertheless, the grade Broadly Implemented could be applied on the basis of the “Assessment Measures” described in the Introduction to this Methodology.
Principle 12 The regulatory system should ensure an effective and credible use of inspection, investigation, surveillance and enforcement powers and implementation of an effective compliance program.

Principle 12 requires the regulator to demonstrate how the regulatory system in place, and its own organization, provides for an effective and credible use of inspection, investigation, surveillance and enforcement powers and compliance programs. In particular, the regulator should be able to demonstrate that there is a system to take effective inspection, investigation, surveillance and enforcement actions and that, where appropriate, actions have been undertaken to address misconduct or abuses. An effective program, for example, could combine various means to identify, detect, deter and sanction such misconduct. A wide range of possible sanctions could meet the standards according to the nature of the legal system assessed. The regulator, however, should be able to provide documentation that demonstrates that sanctions available (whatever their nature) are effective, proportionate and dissuasive. Sections of the Principles that address specific functions also address possible sanctions.

The regulator should be able to demonstrate that an effective and credible use of inspection, investigation, surveillance and enforcement powers has been made and will be made in the future. The effective and credible use of powers depends on adequate powers, proper resources and the capacity to perform its functions and exercise its powers. Whereas Principles 10 and 11 establish the nature and extent of the regulator’s enforcement powers, and Principle 3 addresses resources in general, Principle 12 covers the use of the resources by the regulator in the performance of its functions and exercise of its enforcement powers.

In particular, the regulator should be able to demonstrate and explain how its powers are exercised by:

- The regulatory actions undertaken in the jurisdiction. This may include the manner in which concerns raised through inspections, surveillance or compliance reviews may lead to investigation and enforcement proceedings.
- The compliance programs that it requires regulated entities to have in place to prevent, detect and correct securities law violations. For example, a compliance program may include establishing internal controls, day-to-day supervision, and monitoring of activities within the entity and a requirement for written policies and procedures to be communicated to employees of the entity. The regulator should monitor the entity’s compliance with policies and procedures.
- The type of ongoing and ad hoc inspections performed in the jurisdiction (see Principle 10 for a description of the term “inspections”). For example, the regulator may have a method for determining the frequency and scope of inspections of regulated entities, or may have a risk-based process for setting inspection priorities and scope.
- The investigation and enforcement actions undertaken in the jurisdiction. This may include the regulators’ ability to detect and gather the information necessary to exercise these actions, which may involve partners such as other regulators, SROs and law enforcement agencies.
- The sanctions imposed, or other corrective action effected, with respect to misconduct detected within the jurisdiction. Regulators may have and use a range of regulatory responses and sanctions to deter potential misconduct, which will allow the regulator to seek remedies that are effective, proportional and dissuasive.
PRINCIPLES RELATING TO ENFORCEMENT

Key Issues

1. In order to have an effective and credible enforcement system, it is not sufficient for a regulator simply to have the statutory powers set out in the Principles. The regulator should be able to:
   (a) Detect suspected breaches of the law in an effective and timely manner.
   (b) Gather the relevant information necessary for investigating such potential breaches.
   (c) Be able to use such information to take action where a breach of the law is identified.
   (d) Demonstrate that it has programs in place and utilizes its resources in order to effectively exercise activities according to Key Issues 1(a) to (c).

2. In addition, the regulator should require a compliance system to be in place for regulated entities aimed at preventing, detecting and correcting securities law violations, which includes:
   (a) Inspections or self-reviews using methodologies and techniques which are adequate, but which may vary from jurisdiction to jurisdiction.
   (b) Other monitoring or surveillance techniques.

Key Questions

Detecting Breaches

1. Is there an effective system of inspection in place whereby the regulator carries out inspections:
   (a) On a routine periodic basis?
   (b) Based upon a risk assessment?
   (c) On a non-periodic basis in response to intelligence received (e.g. investor complaints, and tips and complaints from other sources)?

2. Is there an automated system which identifies unusual transactions on authorized exchanges and regulated trading systems?

3. Can the regulator demonstrate adequate mechanisms and procedures to detect and investigate:
   (a) Market and/or price manipulation?
   (b) Insider trading?
   (c) Misrepresentations of material information or other fraudulent or manipulative practices relating to securities and derivatives?
   (d) Failure of compliance with other regulatory requirements, for example: conduct of business, capital adequacy, disclosure, or segregation of client assets?
PRINCIPLES RELATING TO ENFORCEMENT

4. Does the regulator have an adequate system to receive and respond to the intelligence that it receives?

Compliance System

5. Does the regulator require regulated entities to have in place supervisory and compliance procedures reasonably designed to prevent securities law violations?

6. Does the regulator monitor how compliance procedures are executed and communicated to employees of such entities?

7. Can the regulator take measures against or discipline or sanction regulated entities for failure to supervise reasonably subordinate personnel whose activities violate the securities laws?

8. Does the regulator require market surveillance mechanisms that permit an audit of the execution and trading of all transactions on authorized exchanges and regulated trading systems?

Effectiveness

9. Based on articulated criteria, does the regulator or other competent authority have an effective enforcement program in place in order to enforce securities laws?

Explanatory Notes

In assessing this Principle, the assessor also should refer to Principles 10 and 11 with respect to powers, Principles 13 and 15 with respect to cooperation and Principles 2 and 3 with respect to adequacy of resources, procedures and accountability of regulators.

The assessor should assess whether there is evidence of an effective system in place to detect breaches, gather and use information, promote compliance and sanction non-compliance, using inspection, investigation, surveillance, and enforcement powers. There should be effective and credible use of these powers in respect of the various areas of securities regulation.

The regulator or third party, including an SRO, should be able to demonstrate to the assessor records and other material evidence that describe enforcement activities including legislative provisions, published guidance, and illustrative press releases covering relevant enforcement cases, complaints and dispositions, if public.

In assessing a risk-based inspection program, the assessor should determine how priorities are set and how they are adjusted or updated, for example, by use of review of periodic financial reports or other mechanisms. It is sufficient that a system for the redress of complaints under the regulatory framework be addressed through an ombudsman, external dispute-resolution provision or other third party scheme or through oversight of individual firm arrangements.

In assessing the effectiveness of an enforcement program, the assessor should assess whether the regulator uses the powers set forth in Principle 11, Key Question 2(a) to 2(d).

The lack of skilled staff to operate an automated system referred to in Key Question 2 is a strong indicator that the respective Question should be answered in the negative.

Assessors must check whether auditing of transactions is provided for and in fact has been performed.
PRINCIPLES RELATING TO ENFORCEMENT

There is a strong indication that Key Question 3(a) and 3(b) cannot be answered affirmatively, if Key Question 2 is answered negatively.

In relation to Key Question 9, assessors must articulate the metrics used to arrive at their conclusions about the effectiveness of an enforcement program. These metrics could, but not necessarily, include: (1) resources dedicated to an enforcement program; (2) level of fines imposed per annum; (3) cost of capital in the jurisdiction as a proxy for investor confidence in the enforcement program; (4) the number of cases filed per annum; and (5) number and type of investigations conducted per year.

Benchmark

**Fully Implemented**

Requires affirmative responses to either 1(a) or 1(b) and to all other applicable Questions provided that, in the case of an affirmative response only to 1(b), there must be some means to identify changes in risk priorities or status of firms potentially subject to inspection and the ability to demonstrate effective coverage.

**Broadly Implemented**

Requires affirmative responses to either 1(a) or 1(b) and to all other applicable Questions except to Questions 2, 4 and 8 and/or an investigation, surveillance and enforcement system is in place but more resources need to be committed to ensure effective management, adjustments in operation of the system may be necessary, or certain desirable powers (see Principle 10) are necessary to augment the system to make it more effective.

**Partly Implemented**

Requires affirmative responses to either Questions 1(a) or 1(b) and to Question 1(c), 3(a), 3(b), 3(c), 3(d), 5, 6, 7, and the regulator can demonstrate that it has an active enforcement and compliance program, although there are some deficiencies in timeliness or coverage.

**Not Implemented**

Inability to respond affirmatively to both Question 1(a) and 1(b) or one or more of Questions 1(c), 3(a), 3(b), 3(c), 3(d), 5, 6, 7 or 9.

PRINCIPLES RELATING TO COOPERATION

D. PRINCIPLES RELATING TO COOPERATION

1. Preamble

Principles 13, 14 and 15 address cooperation amongst regulators and their domestic and foreign counterparts for investigations, enforcement and for supervision and other regulatory purposes.\(^{71}\)

The increasing internationalization of financial activities and the globalization of markets can put information beyond the immediate reach of one individual regulator. This puts an additional emphasis on the need for international cooperation and information sharing among regulators.

Fraud, market manipulation, insider trading and other illegal activities, such as the unauthorized provision of financial services that crosses jurisdictional boundaries, can and do occur in a global market aided by modern telecommunications. In addition, increasing numbers of market participants are conducting business and regulated activity in and across multiple jurisdictions.

Cooperation is vital to ensuring that compliance programs, as well as investigations and enforcement actions are not impeded unnecessarily by jurisdictional boundaries.

Even within the same jurisdiction, there may be an important need to share information at a domestic level. Where there is more than one regulator or where the securities law overlaps with the general law of a jurisdiction, the need for domestic cooperation may extend beyond matters of enforcement and include information relevant to authorization to act in a particular capacity and to the reduction of systemic risk, for example, where there are divisions in responsibility for the securities, banking and other financial sectors.\(^{72}\) Principle 13 measures the extent of a regulator’s ability to share information. Principle 14 deals with whether the regulator has mechanisms in place to establish when and how the regulator will share information with its counterparts. Principle 15 relates to the types of assistance that a regulator may provide to a counterpart.

The IOSCO MMoU is designed to facilitate, among other things, the implementation of Principles 13, 14 and 15. Thus an authority which is not able to sign the IOSCO MMoU cannot be fully implemented with regard to at least one of these Principles. Conversely, accession to the IOSCO MMoU is a strong indicator that these Principles are fully implemented since the authority has the requisite legal authority to meet the international standards articulated in the IOSCO MMoU. However, accession to the IOSCO MMoU does not automatically lead to the conclusion that the Principles are fully implemented since — for example — the authority concerned may lack the resources and/or practical ability to assist properly at the time of the Principles assessment.

---

\(^{71}\) Information sharing for supervision and other regulatory purposes may require, for example, among other things: routine sharing of information on questionable activities and proven frauds; information on any concern about an applicant in regard to licensing, authorization or eligibility determinations; listing or registration of securities; information about the current circumstances of a licence holder or issuer; information that may be needed to minimize the adverse effects of market disruptions, including contingency plans, contact persons and structural measures to address market disruptions; and information on market conditions, such as actions taken by market authorities, prices, trading activities, market data, etc.

\(^{72}\) Principles 1 and 3.
International cooperation between regulators is also necessary for the effective regulation and supervision of domestic markets. The inability to provide regulatory and supervisory assistance can seriously compromise efforts towards effective securities regulation. Domestic laws need to remove impediments to international cooperation.73

2. **Scope**

The regulator should identify the agencies within the jurisdiction it needs to cooperate with, the types of arrangements required and the purposes for cooperating. For example, in some jurisdictions it may be necessary to obtain information from another authority within the jurisdiction, or to rely on another authority to bring or to initiate a compliance review, investigation or enforcement action. The regulator should be able to demonstrate the gateways or channels through which required information can be made available and that those channels work when needed. Additionally, the regulator should identify the laws of the jurisdiction, such as blocking, bank secrecy or other types of legislation or judicial decisions, that can affect its ability to cooperate with others.

The ability of a regulator to cooperate is closely related to its powers to obtain and keep confidential the information requested by its foreign counterparts, as provided in the Principles Relating to the Regulator and Principles for Self-Regulation, as well as in the IOSCO MMoU and other cooperative arrangements.

---

3. **Principles 13 through 15**

| Principle 13 | The Regulator should have authority to share both public and non-public information with domestic and foreign counterparts. |

This Principle addresses the power of the regulator(s) to share public and non-public information within its files, or available to it through inspection, investigation, and surveillance, *without other external process*. When sharing non-public information, care must be taken by the requested regulatory authority to ensure that the use of such information is consistent with the purpose for which it is shared and to preserve its confidentiality subject to such uses.

There may be an important need to share information at a domestic level with other domestic authorities. Cases of fraud or money laundering that involve dealings in securities may require close cooperation between two or more domestic agencies including law enforcement, regulatory and judicial authorities. The need for domestic cooperation is also important in the context of supervision and will include information relevant to authorization to act in a particular capacity and the reduction of systemic risk, especially where there are divisions in responsibility for the securities, banking and other financial sectors.

International cooperation between regulators is necessary for the effective regulation and supervision of domestic markets. The inability to provide regulatory and supervisory assistance can seriously compromise efforts towards effective securities regulation. Domestic laws need to remove impediments to international cooperation.

The removal of any “dual illegality” conditions to information sharing and regulatory cooperation is essential. As a transitional matter, while a jurisdiction moves towards the removal of dual illegality conditions, it is essential that any conditions be interpreted flexibly and in a manner that minimizes impact on international cooperation.

While regulators have different supervisory approaches, each has a common interest in information-sharing and cooperation based on earned trust in each other’s regulatory and supervisory systems.74

The form and content of the cooperation will vary from case to case.75 It is essential that assistance can be provided not only for use in investigations but also for other types of inquiries, for example as part of a program for the purpose of monitoring compliance or preventing illicit activities within the scope of securities regulation. Regulators may also assist each other in providing or sharing enforcement techniques.

---

75 Cooperation may require: routine sharing of information on questionable activities and proven frauds; information on any concern about an applicant for licensing, listing or registration; information about the current circumstances of a licence holder or issuer; information that may be needed to minimize the adverse effects of market disruptions, including contingency plans, contact persons and structural measures to address market disruption; and information on market conditions such as actions taken by market authorities, prices, trading activities, and market data, *Multi-Jurisdictional Information Sharing for Market Oversight*, Final Report, Report of the Technical Committee of IOSCO, April 2007, available at http://www.iosco.org/library/pubdocs/pdf/IOSCOPD248.pdf.
Information that was provided to a regulator for investigation and enforcement purposes should be able to be shared directly or indirectly through authorities in their jurisdiction for use in investigation and prosecution (administrative, civil and criminal) of securities violation.

Cooperation in the context of supervision is also important. There is a need to exchange general and more specific information about matters of regulatory concern, including financial and other supervisory information, technical expertise and surveillance. The sharing of information related to systemic risks should also be central to cooperation between jurisdictions, as assessed in Principle 6.

Globally active regulated entities, particularly with regard to their compliance culture, financial condition and risk exposure, must be subject to information sharing on an ad hoc basis and in a more organized and specific manner.

**Key Issues**

1. A regulator should be able to share both public and non-public information with other domestic authorities.

2. A regulator should be able to share public and non-public information with its foreign counterparts.

3. Domestic laws should not impede international cooperation through sharing of information for regulatory, inspection, investigation, surveillance or enforcement purposes.

4. Where confidential information gathered by the regulator in the exercise of its functions or powers is shared with another competent authority, either domestically or internationally, the regulator should be able to ensure that the information is provided subject to conditions which, to the extent consistent with the purpose of the release, preserve the confidentiality of that information.

**Key Questions**

1. For each of the regulators identified, does the regulator have authority to share with other domestic regulators and authorities information on:

   (a) Matters of inspection, investigation and enforcement?

   (b) Determinations in connection with authorization, licensing or approvals?

   (c) Surveillance?

   (d) Market conditions and events?

---

76 Resolution on Record Keeping, supra, Parts C and D at p.2. See also the IOSCO MMoU, supra, Parts 6, 7, 10 and 11.

77 That is, the regulators which have responsibility for securities enforcement identified as part of the assessment process.
PRINCIPLES RELATING TO COOPERATION

(e) Client identification including persons who beneficially own or control non-natural persons organized in the regulator’s jurisdiction?

(f) Regulated entities?

(g) Listed companies and companies that seek a listing of their securities?

2. Can the regulator share the information described in Key Question 1 for regulatory and enforcement purposes with other domestic authorities without the need for external approval\(^\text{78}\) such as from a relevant government minister or attorney?

3. Does the regulator have the authority to share information with foreign counterparts with respect to each of the matters listed in Key Question 1?\(^\text{79}\)

(a) Matters of inspection, investigation and enforcement?

(b) Determinations in connection with authorization, licensing or approvals?

(c) Surveillance?

(d) Market conditions and events?

(e) Client identification including persons who beneficially own or control non-natural persons organized in the regulator’s jurisdiction?

(f) Regulated entities?

(g) Listed companies and companies that seek a listing of their securities?

4. Can the regulator share the information identified in Key Question 3 above, for enforcement and regulatory purposes with foreign counterparts without the need for external approval,\(^\text{80}\) such as from a relevant government minister or attorney?

5. Can the regulator provide information to other domestic and foreign authorities on an unsolicited basis?

6. Can the regulator share information with foreign counterparts even if the alleged conduct would not constitute a breach of the laws of the regulator’s jurisdiction if conducted within that jurisdiction?

7. Can the regulator share with domestic and foreign counterparts information and records identifying the person or persons beneficially owning or controlling bank accounts related to securities and derivatives transactions and brokerage accounts as well as the necessary information to reconstruct a transaction, including bank records?\(^\text{81}\)

\(^\text{78}\) If such approval is purely formalistic and occurs immediately, the regulator could receive a *Fully Implemented* assessment even though such approval is required. For example, in some jurisdictions, the Attorney General or similar official signs off on actions as the chief legal authority in the system. Ideally, in domestic circumstances some sharing would be pre-approved.

\(^\text{79}\) This question may be answered in the affirmative if one competent authority has the authority to share all required information, including information originally in the possession of another competent domestic authority, with its foreign counterpart.

\(^\text{80}\) If such approval is purely formalistic and occurs immediately, the regulator could receive a *Fully Implemented* assessment even though such approval is required. See previous example in footnote 78.

\(^\text{81}\) IOSCO MMoU, supra, par. 7(b)(ii) at p. 4.
8. Does the regulatory system provide enough assurance that the confidential information gathered by the regulator in the exercise of its functions or powers that is shared with another competent authority, either domestically or internationally, is subject to appropriate rules of confidentiality?

**Explanatory Notes**

An application for a licence may be received from a person known to be registered in another jurisdiction, or registration may be sought for the same offer documents in several jurisdictions. Similarly, threats to systemic stability are not confined to domestic factors and may include the behaviour of individual financial institutions in another jurisdiction.

Further, an increasing number of companies have securities listed in more than one jurisdiction and it is common for a significant part of an issuer’s commercial activity to take place in a country other than the one in which its stock is listed. Investors frequently invest in foreign markets and securities either directly or in managed funds. An increasing number of collective investment schemes are marketed across jurisdictional boundaries. It is also common for scheme promoters, managers, and custodians to be located in several different jurisdictions and they may not be in the same jurisdiction as investors to whom the scheme is promoted.

Similar financial products may be traded on various markets in several countries; moreover, there are many derivatives in which the underlying product or reference price is traded, produced or derived on foreign markets.

Notwithstanding the obligation to cooperate domestically, when information is passed through an international channel, the uses of such information may be restricted to the uses specified in the information sharing arrangement. For example, when information is obtained by a foreign counterpart under the IOSCO MMoU, it is not allowed to use this information outside the uses contemplated by the IOSCO MMoU. If there is a necessity to use this information in a way which is not covered by the IOSCO MMoU the requesting authority must obtain the consent of the requested authority.

If there are bank secrecy, confidentiality or blocking statutes, the regulator should be able to demonstrate whether there are exceptions to these statutes that allow the regulator to obtain and share information with foreign counterparts.

Assessors should ask whether there have been court cases or other developments that cast doubt as to whether the powers granted to the regulator are in fact enforceable.

The Principles recognize that the regulator can legitimately impose conditions when it shares information, particularly non-public information, with its domestic and foreign counterparts. Conditions might include ensuring appropriate use of the information and ensuring the confidentiality of the information except pursuant to the uses permitted, such as in a public enforcement action for which the information was requested. See also Principle 14, which addresses confidentiality safeguards more generally.

A request for assistance may be denied by a requested authority:

1. where the request would require the requested authority to act in a manner that would violate domestic laws;
2. on grounds of public interest or essential national interest;
PRINCIPLES RELATING TO COOPERATION

3. where a criminal proceeding has already been initiated in the jurisdiction of the requested authority based upon the same facts and against the same persons, or the same persons have already been the subject of final punitive sanctions on the same charges by the competent authorities of the jurisdiction of the requested authority, unless the requesting authority can demonstrate that the relief or sanctions sought in any proceedings initiated by the requesting authority would not be of the same nature or duplicative of any relief or sanctions obtained in the jurisdiction of the requested authority; or

4. where the request is not made in accordance with the provisions of the IOSCO MMoU.

Where a request for assistance is denied, or where assistance is not available under domestic law, the requested authority will provide the reasons for not granting the assistance and consult with the requesting authority.

Benchmarks

*Fully Implemented*

Requires an affirmative response to all applicable Questions.

*Broadly Implemented*

Requires an affirmative response to all applicable Questions except to Questions 2 and 4, provided that information sharing still can occur in a timely fashion.

*Partly Implemented*

Requires an affirmative response to all applicable Questions except to Question 3(c) provided that information can be made available in specific cases, Questions 2 and 4 if the conditions for *Broadly Implemented* are not met, and Question 5.

*Not Implemented*

Inability to respond affirmatively to one or more of Questions 1(a), 1(b), 1(c), 1(d), 1(e), 1(f), 1(g), 3(a), 3(b), 3(c), 3(d), 3(e), 3(f), 3(g) or 6, 7, 8, or such a significant inability to act in a timely manner that the Principle cannot be regarded as implemented.
Principle 14  Regulators should establish information sharing mechanisms that set out when and how they will share both public and non-public information with their domestic and foreign counterparts

Securities regulators have long used MoUs to facilitate consultation, cooperation and the exchange of information in securities enforcement matters. These enforcement MoUs permit regulators who suspect there has been a violation of their laws and/or regulators to seek *ad hoc* assistance from their overseas counterparts when evidence of the possible violation may lie outside their jurisdictions. Most of these MoUs have been entered into on a bilateral basis; since 2005 the IOSCO MMoU has become the mandatory global minimum standard for enforcement cooperation among securities regulators.

More recently, securities regulators have come to recognize that effective supervision and oversight in today’s global environment requires that regulators be equipped with tools not only for assistance in securities enforcement (which are by nature *ad hoc* and focus on sharing information related to a particular possible violation), but also both *ad hoc* and ongoing regulatory cooperation in the supervision of regulated entities. Such cooperation is critical to help ensure the seamless and efficient regulation of globally active regulated entities, in a manner fully consistent with the laws and requirements of all the jurisdictions involved. Much of this collaboration and cooperation has developed on an *ad hoc* basis but more established forms, including MoUs and supervisory colleges, have also been established.

MoUs facilitate the process of information exchange by establishing a more formalized mechanism or framework that makes clear permitted uses, confidentiality arrangements, and other operational procedures between the parties.

**Key Issues**

1. The design of information-sharing mechanisms should take into account the following factors:
   
   (a) Which market authority or regulator has access to and is able to provide the information or assistance.
   
   (b) How such access can be obtained under applicable law.
   
   (c) Confidentiality under applicable law.
   
   (d) Permitted use under applicable law.
   
   (e) The form and timing of the assistance or information sharing.
   
   (f) The applicability of other arrangements, including MOUs between such authorities for sharing investigative and financial information.

---

2. Where confidential information gathered by the regulator in the exercise of its functions is shared with another authority, particular care must be taken to ensure that the information is provided subject to conditions, which, to the extent consistent with the purpose of its release, preserve the confidentiality of that information.

3. The regulator should be able to maintain the confidentiality of the request consistent with Article 11 of the IOSCO MMOU.

Key Questions

1. Does the regulator have the power, by legislation, rules or as a matter of administrative practice, to enter into information-sharing agreements (whether formal or informal) with other domestic authorities?

2. Does the regulator have the power, by legislation, rules or as a matter of administrative practice, to enter into information-sharing agreements (whether formal or informal) with foreign counterparts?

3. Is the regulator a signatory to the IOSCO MMoU (in the affirmative, please skip Question 4(a))?

4. Has the relevant regulator developed information-sharing mechanisms to:
   (a) Facilitate the detection and deterrence of cross-border misconduct?
   (b) Assist in the discharge of licensing, surveillance and enforcement responsibilities?\(^{83}\)

5. Where warranted by the scope of cross-border activity and the ability to provide reciprocal assistance, does the regulator actively try to establish information-sharing arrangements with foreign regulators?

6. Are these arrangements documented in writing?

7. Does the regulator take steps to assure safeguards are in place to protect the confidentiality of information transmitted consistent with its uses?

8. Can the regulator maintain the confidentiality of the request for information received from a foreign regulator consistent with Article 11 of the IOSCO MMOU?

9. Can the regulator demonstrate that it shares information, where appropriate safeguards are in place, when it is requested by another domestic authority or foreign counterpart?

Explanatory Notes

This Principle can be satisfied through the use of a range of mechanisms for sharing entity-specific information and market-wide intelligence – each address different, albeit overlapping, types of information-sharing. Each mechanism also buttresses the others, making all of them more effective when used in conjunction as part of a single overarching supervisory cooperation strategy among IOSCO members. All of these different mechanisms, however, are likely to be useful to securities regulators for different purposes.

\(^{83}\) When the person that is the subject of the inquiry is known to the requested authority.
MoUs or other documented arrangements can help to add certainty, and in some cases, expedition, to the process of information exchange. Nonetheless, the mere formality of an arrangement is no substitute for a close and cooperative arrangement.

The assessor should be able to provide actual evidence of the usefulness of existing arrangements for cooperation. For example, the jurisdiction should be able to demonstrate that it can and does share information when requested to do so by another authority. If this is not possible, then the assessor should question the efficacy of either formal or informal arrangements. The assessment does not address whether the regulator obtains the information directly or indirectly. \(^{84}\)

The regulator should identify responses to requests for assistance and should provide examples of successful and substantive responses. The regulator should provide a list of the number of requests for assistance received, the type of assistance requested for each request, and provide examples of successful and substantive responses by the regulator. \(^{85}\) The regulator should also provide information if there are instances where cooperation was denied and provide the rationale for such denial. If practical cases have not occurred, the regulator should be able to demonstrate that there are internal processes in place that address the aforementioned issues.

In the context of the IOSCO MMoU, the regulator should be able to demonstrate its practical ability to share information required under the IOSCO MMoU and show actual instances in which information required under the IOSCO MMoU was shared with foreign counterparts.

Under the IOSCO MMoU, each authority will keep confidential requests made under the IOSCO MMoU, the contents of such request, and any matters arising under the IOSCO MMoU, including consultations between or among authorities, and unsolicited assistance. After consultation with the requesting authority, the requested authority may disclose the fact that the requesting authority has made the request if such disclosure is required to carry out the request. In this context, confidentiality with regard to requests and information received from another authority is very important. In accordance with Article 11(b) of the IOSCO MMoU, the authority that has made a request will keep confidential non-public documents and information received under the MMoU, except as contemplated by Article 10(a) of the IOSCO MMoU or in response to a legally enforceable demand. In the latter case, the requesting authority should notify the requested authority prior to complying with the demand and assert such appropriate legal exemptions or privileges with respect to the information concerned as may be available.

The assessor should assess the extent to which the regulator has to comply with demands for disclosure of other domestic authorities; see Articles 10 and 11 of the IOSCO MMoU.

Although the regulator may not be a signatory to the IOSCO MMoU, the assessor should seek to assess the extent to which the regulator can still facilitate the detection and deterrence of cross-border misconduct.

---

\(^{84}\) This question may be answered in the affirmative if one competent authority has the authority to share all required information, including information originally in the possession of another competent domestic authority, with its foreign counterpart.

\(^{85}\) Consistent with confidentiality obligations (including Article 11 of the IOSCO MMoU), the regulator, in providing examples of successful and substantive responses, should consider masking references that identify its counterpart and any individuals or firms.
PRINCIPLES RELATING TO COOPERATION

Benchmarks

*Fully Implemented*

Requires an affirmative response to all applicable Questions.

*Broadly Implemented*

Requires an affirmative response to all applicable Questions except to Question 6.

*Partly Implemented*

Requires an affirmative response to all applicable Questions except to Question 6 and that an affirmative response to one or more of Questions 4(a), 4(b) and 5 is not required if the regulator’s jurisdiction does not do substantial cross-border business and the need for information sharing is infrequent and *ad hoc*.

*Not Implemented*

Inability to respond affirmatively to one or more of Questions 1, 2, 3, 7, 8 or 9, or Questions 4(a), 4(b) or 5 if the regulator’s jurisdiction does more than an insubstantial cross-border business, or there is evidence that information cannot be, and is not being, shared in appropriate cases in a timely manner.
Effective regulation and supervision can be compromised when necessary information is located in another jurisdiction and is not available or accessible. Thus, a regulator should be empowered to assist and provide information necessary to foreign regulators in the discharge of their mandate and mission. Without this ability, information gathering powers would be insufficient to ensure proper regulation, supervision and enforcement of markets.

Fraud, market manipulation, insider trading and other illegal conduct that crosses jurisdictional boundaries can and do occur in a global market aided by modern telecommunications.

The IOSCO MMoU was put in place with the goal of ensuring that a cooperative mechanism exists among IOSCO members at the international level to facilitate the detection and deterrence of cross-border misconduct. The IOSCO MMoU is considered to be the minimum standard for international enforcement and cooperation. It is therefore essential for IOSCO members to have the legal authority to meet this minimum standard. The IOSCO MMoU is a benchmark for international cooperation, but should not be considered as limiting the ability of members to sign other agreements that may go beyond what is prescribed in the IOSCO MMoU.

Assistance in taking substantive action may also be necessary. When it is within their powers, regulators can more effectively enforce securities laws when they are able to prevent the concealment of the proceeds of fraud or other misconduct, thus facilitating the return of money to injured investors.

Supervisory assistance and cooperation is also essential in the context of activities of regulated entities and issuers on markets across the world. In 2010, IOSCO published a set of principles to guide IOSCO members in developing cross-border cooperative supervisory arrangements, as well as a sample MoU that could assist IOSCO members in designing supervisory cooperation MoUs. Since then, a number of regulators have used these principles and the sample MoU to promote information sharing for supervisory purposes.

---

86 Regulators are encouraged by the Resolution on Cross-Border Cooperation to Freeze Assets Derived from Securities and Derivatives Violations, Resolution of the IOSCO Presidents’ Committee, June 2006, available at https://www.iosco.org/library/resolutions/pdf/IOSCORES25.pdf, to examine the legal framework under which they operate and strive to develop, through law reform or otherwise, mechanisms by which they or another authority within their jurisdiction could, on behalf of a foreign regulator, freeze assets derived from suspected and established cross-border securities violations and thereby deny wrongdoers the benefit of their ill-gotten gains.

88 See Principles Regarding Cross-Border Supervisory Cooperation, supra, which includes at Annex A an Annotated Sample Memorandum of Understanding Concerning Consultation, Cooperation and the Exchange of Information Related to the Supervision of Cross-Border Regulated Entities.
Key Issues

1. A domestic regulator should be able to provide effective assistance to foreign regulators who need to make inquiries under their competence, with respect to securities and derivatives matters, including bank and brokerage records and client identification information, regardless of whether the domestic regulator has an independent interest in the matter.

2. Assistance, including compulsory assistance, in obtaining records should be provided to foreign regulators in securing compliance with securities and derivatives laws.

3. Regulators should be able to provide assistance, including obtaining court orders, to the full extent of their powers.

4. Regulators should be able to provide information on financial conglomerates subject to their supervision.

5. Regulators should be able to share information and provide assistance for effective regulation and supervision of markets and market participants.

Key Questions

1. Is the domestic regulator able to offer effective and timely assistance to foreign regulators in obtaining:
   a. Contemporaneous records sufficient to reconstruct all securities and derivatives transactions, including records of all funds and assets transferred into and out of bank and brokerage accounts relating to those transactions?
   b. Records for securities and derivatives transactions that identify:
      i. The client:
         1. Name of the account holder?
         2. Person authorized to transact business?
      ii. The amount purchased or sold?
      iii. The time of the transaction?
      iv. The price of the transaction?
      v. The individual and the bank or broker and brokerage house that handled the transaction?
   c. Information located in its jurisdiction identifying persons who beneficially own or control non-natural persons organized in its jurisdiction?

89 See generally Principles for Memoranda of Understanding, supra. See also IOSCO MMoU, supra.

90 For these questions, see generally Principles for Memoranda of Understanding, supra; Resolution on Record Keeping, supra; and IOSCO MMoU, supra.

91 This question may be answered in the affirmative if one competent authority has the authority to share all required information, including information originally in the possession of another competent domestic authority, with its foreign counterpart. See also Principle 13.
2. Is the domestic regulator able to offer effective and timely assistance to foreign regulators in securing compliance with laws and regulations related to:
   (a) Insider dealing, market manipulation, misrepresentation of material information and other fraudulent or manipulative practices relating to securities and derivatives, including solicitation practices, handling of investor funds and customer orders?
   (b) The registration, issuance, offer or sale of securities and derivatives, and reporting requirements related thereto?
   (c) Market intermediaries, including investment and trading advisers who are required to be licensed or registered, collective investment schemes, brokers, dealers and transfer agents?
   (d) Markets, exchanges and clearing and settlement entities?

3. Is the domestic regulator able, according to its domestic laws and regulations, to provide effective and timely assistance to foreign regulators regardless of whether the domestic regulator has an independent interest in the matter?

4. Is the domestic regulator able to offer effective and timely assistance to foreign regulators in obtaining information on the regulatory processes\(^\text{92}\) in its jurisdiction?

5. Is the domestic regulator able to offer effective and timely assistance to foreign regulators in requiring or requesting:
   (a) The production of documents?
   (b) Taking a person’s statement or, where permissible, testimony under oath?

6. Is the domestic regulator able to offer effective and timely assistance to foreign regulators in obtaining court orders, if permitted, for example, urgent injunctions?\(^\text{93}\)

7. Is the domestic regulator able to provide effective and timely assistance to foreign regulators regarding information about financial conglomerates subject to its supervision and more precisely assistance in relation, for example, to:
   (a) The structure of financial conglomerates?
   (b) The capital requirements in conglomerate groups?
   (c) Investments in companies within the same group?
   (d) Intra-group exposures and group-wide exposures?
   (e) Relationships with shareholders?
   (f) Management responsibility and the control of regulated entities?

8. If the regulator cannot directly obtain the information set out in Key Question 1, can the regulator obtain that information from another domestic authority and share that information with the requesting regulator?

9. May the requesting authority use the information furnished by the domestic authority for the purposes set forth under Article 10(a) of the IOSCO MMoU?

\(^{92}\) “Regulatory processes” refer to formal processes, such as licensing procedures or audit procedures which could be relevant to enforcement.

\(^{93}\) The regulator should be able to compel the production of documents.
Explanatory Notes

In assessing this Principle, the assessor should refer to Principles 10, 11, and 12 to assess if the regulator has the appropriate power to gather information needed by the foreign regulator.

With respect to injunctions or other remedies, such as asset freezes, where permitted, it is understood that the regulator may need the assistance of another authority. Although the power to assist in obtaining such court orders is not required for a *Fully Implemented* rating if such assistance is not permitted, where such assistance is in fact permitted, the failure to cooperate could result in a *Partly Implemented* rating.

The regulator should be able to demonstrate the timeliness of assistance or cooperative effort by providing records, logs or other supporting evidence.

The regulator should also provide evidence of the type of requests for assistance received, the type of assistance requested for each request, and provide examples of successful and substantive responses by the regulator. The regulator should also provide information if there are instances where cooperation was denied and provide the rationale for such denial.

The form of international assistance may include:\(^{94}\)

- Assistance in obtaining public or non-public information, for example, about a licence holder, listed company, shareholder, beneficial owner or a person exercising control over a licence holder or company.
- Assistance in obtaining banking, brokerage or other records.
- Assistance in obtaining voluntary cooperation from those who may have information about the subject of an inquiry.
- Assistance by providing examination reports.
- Assistance by providing risk analysis assessments and information to support the identification, assessment and mitigation of hidden risks to markets and investors.
- Assistance in inspection of market participants, including visits.
- Assistance in obtaining information or in the compulsion of documents and at least voluntary testimony or statements.
- Assistance in providing information on the regulatory processes in a jurisdiction, or in obtaining court orders, for example, urgent injunctions.

The particular procedures used for the supervision of financial conglomerates must reflect the domestic law of the places in which they operate and must take account of the possibility that relevant regulatory responsibility may continue to be shared between agencies. It is nevertheless possible to identify some general issues that should be considered as matters requiring close supervisory cooperation:

- structure of financial conglomerates;

---

PRINCIPLES RELATING TO COOPERATION

- capital requirements in conglomerate groups;\(^{95}\)
- investments in companies within the same group;
- intra-group exposures and group-wide exposures;\(^{96}\)
- relationships with shareholders;
- management responsibility and the control of regulated entities.

Derivatives are specifically identified in this section, because some jurisdictions can share information with respect to securities, but not with respect to certain derivatives transactions. The assessor should make this explicit when this is the case.

In the case where there is not power to provide specific assistance, the assessor also should inquire as to whether the regulator is making efforts to seek further powers or taking other steps to enhance its capacity to cooperate. In circumstances where the authorities require a court order to obtain certain information (e.g., bank records), an inability to obtain court orders for that purpose in a timely fashion may indicate that the authority is unable to cooperate.

**Benchmarks**

*Fully Implemented*

Requires an affirmative response to all applicable Questions.

*Broadly Implemented*

Requires affirmative responses to all Questions except to Questions 7(a), 7(b), 7(c), 7(d), 7(e) and 7(f).

The regulator can only provide some of the types of information listed and this limitation does not affect its ability to provide information on the entity subject to its supervision or oversight, and provided, however, that the authority takes steps to provide assistance within its powers and such assistance is not so untimely as to be tantamount to being denied.

*Partly Implemented*

Requires affirmative responses to all Questions except to Questions 6, 7(a), 7(b), 7(c), 7(d), 7(e) and 7(f), provided, however, that the authority takes steps to provide assistance within its powers and such assistance is not so untimely as to be tantamount to being denied.

*Not Implemented*

Inability to respond affirmatively to one or more of Questions 1(a), 1(b)(i), 1(b)(ii), 1(b)(iii), 1(b)(iv), 1(b)(v), 1(c) 2(a), 2(b), 2(c), 2(d), 3, 4 or 5(a), 5(b), 8 and 9 or assistance does not occur or is so untimely as to be tantamount to being denied.

99
E. PRINCIPLES RELATING TO ISSUERS

1. Preamble

These Principles are about the information that issuers should disclose to investors when they invest in securities and on an ongoing basis.

The Principles seek to support IOSCO’s core objectives of securities regulation in the following ways:

- they enhance investor protection by requiring issuers to provide investors with information about the issuer, the risks of investing in its securities, and other matters to support better investment decisions;
- they support the operation of fair, orderly, efficient and transparent markets by providing investors and therefore the markets with accurate and relevant information; and
- they support the reduction of systemic risk as it may be affected by investor confidence by enhancing transparency in the market.

Principles 16, 17 and 18 are closely interrelated. While Principle 16 focuses primarily on full, timely and accurate disclosure of financial and non-financial information, these same qualities of disclosure are essential for the purposes of Principles 17 and 18. For example, it should be impossible to conclude under Principle 17 that holders of securities are treated in a fair and equitable manner if they are not provided with full, timely and accurate disclosure in connection with the voting decisions and change of control transactions addressed in that Principle. Similarly, it should be impossible to conclude under Principle 18 that accounting standards are of a high and internationally acceptable quality if full and accurate disclosure would not be reflected in the financial statements to which such standards have been applied. It also should be impossible to conclude that audited financial statements required in prospectuses, listing documents and annual reports reflect full, timely, and accurate disclosure under Principles 16 or full disclosure to shareholders under Principle 17, if accounting standards of a high and internationally acceptable quality have not been applied to such financial statements.

To determine whether Principles 16, 17 and 18 are implemented in a manner that achieves the objectives of investor protection, fair, orderly, efficient and transparent markets, and reducing systemic risk, it may also be necessary to consider a jurisdiction’s general legal framework and laws that complement securities regulation. Annexure 1 indicates the complementary laws, such as the law of contracts, insolvency and company law, which may constitute part of the legal framework.

Finally, an assessment of implementation of Principles 16, 17 and 18 is also essential for purposes of assessing implementation of Principle 26 regarding collective investment schemes.

2. Scope

Principles 16 and 18 are intended to apply to issuers making “public offerings” of securities and also to issuers whose securities are “listed and/or publicly traded”. Principle 17 is intended to apply to companies whose securities are listed, publicly offered or traded.
Most jurisdictions separately regulate public offerings, thereby ensuring general protection of the public while reducing the regulatory burden in the case of non-public undertakings. The definition of what amounts to an offer to the public varies, as does the threshold for what constitutes public trading.

The term “issuer” should be understood broadly to include all entities and persons who offer or sell their own securities. The Principles do not apply to the issuing of debt by government or entities created by statute which perform a public function or deliver a public service pursuant to a statutory mandate provided that they are backed by the guarantee of the government.

In assessing implementation of these Principles, however, the assessor should bear in mind that the terms “publicly traded” and “public offerings” are not defined in the Principles. Accordingly, the universe of issuers and transactions to which these three Principles apply may be expected to vary among jurisdictions. The assessor should not attempt to substitute his or her judgment in lieu of the law of the jurisdiction as to what constitutes a public offering, but should indicate what public offerings are covered by the law. This may affect the extent to which these Principles are applicable.

With respect to what constitutes “publicly traded” securities to which the Principles should apply, the Principles relating to Secondary and Other Markets provide useful guidance. Those Principles indicate that the concept of a secondary or other market is not limited to traditional organized exchanges, but is also intended to include various regulated forms of “off-exchange” market systems that trade equity and debt securities, as well as options and certain derivative products. That Section, however, is directed principally at authorized exchanges and regulated trading systems as defined therein. Regulation appropriate to a particular secondary or other market will depend upon the nature of the market and its participants.

Bearing in mind that Principles 16, 17 and 18 set forth requirements for disclosure and reporting primarily by issuers, that the objective of these Principles is investor protection, and that the objective of authorized exchanges and regulated trading systems is fairness, efficiency and transparency, the assessor should determine the exchanges and trading systems within a jurisdiction that are deemed to be exchanges and trading systems subject to regulation under Principles 33 to 38 and which provide trading services in corporate equity and debt securities for retail investors. Implementation of Principles 16, 17 and 18 should be assessed with respect to issuers whose securities are listed and/or traded on those authorized exchanges and regulated trading systems.

Even with this guidance, an assessor may have to exercise judgment in assessing whether Principles 16, 17 and 18 have been implemented with respect to publicly traded securities in a particular market.

---

97 These Principles do not apply to private offerings, except where the offering is made through a private placement and the investor then resells to the public.
98 See Principle 1.
100 Refer to Principles on Market Intermediaries, Principles 29–32.
101 See Principle 33.
102 See Principle 34.
103 See Principle 35.
104 References to listing documents in Principles 16–18 apply only where the securities are listed on an authorized exchange or, where relevant, a regulated trading system.
For greater clarification, these Principles apply to the following types of securities in the following ways:\textsuperscript{105}

- Principles 16 and 18 apply to the issuing of equity securities and of debt securities (other than debt securities issued by government or entities created by statute which perform a public function or deliver a public service to a statutory mandate) including publicly traded asset-backed securities\textsuperscript{106} and structured financial products, and derivatives that are securities. They do not apply to the issue of sovereign debt.

- Principle 17 applies only to equity securities.

- Principles 16 to 18 also apply to rights issues to existing security holders.\textsuperscript{107}

If a publicly offered, listed or traded security has features of a derivative (for instance where price is determined by reference to other instruments), these Principles will apply to the issue of that instrument.

The Principles also apply to structured financial products (which may be described as highly complex) that are securities. Adequate disclosure of the risks that the underlying assets of these securities face and the possible effect that these risks may have on the security itself is particularly important. Issuer’s disclosure should also include checks, assessments, duties, and risk practices performed by underwriters, sponsors and originators; and asset pool performance.

In assessing the regulatory framework for issuers that make “public offerings”, the assessor should consider the requirements with respect to content of advertising, and information about issuers, offerings, listing, periodic reports and reports of material events, bids or the change in control or change of interest associated with the holding of a publicly offered or traded security.

In assessing implementation of Principles 16, 17 and 18, the assessor also should recognize that the source of disclosure and reporting requirements will not necessarily be limited to securities law and regulations. For example, in some jurisdictions, timely disclosure and other requirements are imposed by marketplace listing rules. In such circumstances, there should be appropriate oversight by the regulator. In assessing implementation of these Principles, the assessor also should recognize that regulatory requirements may be tailored based on the nature of the issuing entity, the securities issued, or the initial investor.

\textsuperscript{105} The list of securities to which these Principles apply is not intended to be exhaustive.

\textsuperscript{106} 

\textit{Disclosure Principles for Public Offerings and Listings of Asset-Backed Securities}, Final Report, Report of the Technical Committee of IOSCO, April 2010, available at http://www.iosco.org/library/pubdocs/pdf/IOSCOPD318.pdf and \textit{Principles for Ongoing Disclosure for Asset-Backed Securities}, Final Report, Report of the Board of IOSCO, November 2012, available at http://www.iosco.org/library/pubdocs/pdf/IOSCOPD395.pdf, define asset-backed securities (at p. 4 and p. 2 respectively) as “those securities that are primarily serviced by the cash flows of a discrete pool of receivables or other financial assets that by their terms convert into cash within a finite period of time, such as RMBS (residential mortgage-backed securities) and CMBS (commercial mortgage-backed securities), among others.” These Principles are not intended to apply to “securities backed by assets pools that are actively managed (such as some securities issued by investment companies), or that contain assets that do not by their terms convert to cash (such as collateralized debt obligations)”.

\textsuperscript{107} 

Finally, the assessor should determine the extent to which a jurisdiction’s secondary market and publicly traded issues are subject to, or are realistic candidates for, cross-border listing and/or trading activity, since this may affect the importance of some of the Key Questions.\textsuperscript{108}

In general, the appropriate framework for issuer regulation includes adequate company, accounting, commercial and contract law. While the assessor should be informed about the legal framework, in general, the specific objectives of non-securities-specific law are addressed explicitly in the Key Issues, Key Questions, and Benchmarks to this Section.

\textsuperscript{108} Principle 16, Key Question 9. See also Principle 17, Key Question 6; and Principle 18, Key Question 7.
3. **Principles 16 through 18**

| Principle 16 | There should be full, accurate and timely disclosure of financial results, risk and other information which is material to investors’ decisions. |

Issuers should disclose to investors current and reliable information necessary to make informed investment decisions on an ongoing basis. The Principle of full, timely and accurate disclosure of current and reliable information material to investment decisions is directly related to the objectives of investor protection and fair, efficient and transparent markets.\(^{109}\)

This Principle requires consideration of the adequacy, accuracy and timeliness of both financial and non-financial disclosures as well as disclosure of risks that are material to investors’ decisions. These disclosures may pertain to specified transactions, periodic reports and ongoing disclosure and reporting of material developments.

This Principle applies to issuers of securities, as defined in the Scope to these Principles.

Disclosure requirements set out in this Principle may extend beyond the issuing entity itself to include others, such as directors and senior officers of the company, participating underwriters, material shareholders and other parties playing a material role in issuing securities.\(^{110}\) It will be apparent from the text where others have a relevant obligation.

**Key Issues**

**Full Disclosure**

1. The regulatory framework should ensure full, timely and accurate disclosure of risks, financial results and other information that is material to investors making informed investment decisions on an ongoing basis.

2. Disclosure rules should include rules about the following (with the list being illustrative):
   
   (a) The conditions applicable to an offering of securities for public sale.

   (b) The content and distribution of prospectuses, listing particulars documents or other offering documents.

---

PRINCIPLES RELATING TO ISSUERS

(c) Supplementary documents prepared in the offering.

(d) Advertising in connection with the offering of securities.

(e) Information about those who have a significant interest in an issuer.111

(f) Information about those who seek control of an issuer (discussed in greater detail below).

(g) Information material to the price, or value, of a security.112

(h) Periodic reports.

(i) Shareholder voting decisions.

(j) Material related party transactions and transactions including transactions involving directors and senior managers of the issuer.113

(k) Periodic disclosure of information about director and senior management compensation and risk management practices.114

(l) The most significant risks material to the offering.115

General Disclosure

3. Specific disclosure requirements should be augmented by a general disclosure requirement.

112 If there are classes of shares or other structural features that would affect share price, these should be disclosed. This information also would include the release of price sensitive information.

113 See Principles for Periodic Disclosure by Listed Entities, supra, p. 11.

114 The reference to ‘risk management practices’ is in the context of disclosure on compensation. The information about director and senior management compensation and risk management practices is important to investors so that they can assess the incentives created by this use of the issuer’s resources, whether the incentives of the compensation are aligned with investors’ interests, and how performance may be oriented to the returns generated for shareholders. This assessment can be facilitated by disclosure of, among other things, the most important design characteristics of the compensation system including how those characteristics may be tied to performance and, where appropriate, risk. See Principles for Periodic Disclosure by Listed Entities, supra, pp. 11–13.

115 See Disclosure Principles for Public Offerings and Listings of Asset-Backed Securities, supra, Principle XI at p. 32; see also International Disclosure Standards for Cross-Border Offerings and Initial Listings by Foreign Issuers, supra, Item III D at p. 12; and International Disclosure Principles for Cross-Border Offerings and Listing of Debt Securities by Foreign Issuers, supra, Item III at p. 12.
PRINCIPLES RELATING TO ISSUERS

Sufficiency, Accuracy, Timeliness and Accountability for Disclosure

4. Disclosure should be accurate, sufficiently clear and comprehensive, and reasonably specific and timely.\textsuperscript{116}

5. Regulation should ensure that proper responsibility is taken for the content of information and, depending on the circumstances, those persons who take liability for such disclosures may include the issuer, underwriters, promoters, directors, authorizing officers of the issuer, experts and advisers who consent to be named in the documentation or provide advice.

Derogations

6. The circumstances under which derogation from full and timely disclosure is permitted should be limited and the safeguards that apply in such circumstance should be clear.

Key Questions

Full Disclosure

1. Does the regulatory framework have clear, comprehensive and reasonably specific disclosure requirements that apply to:

(a) Public offerings, including the conditions applicable to an offering of securities for public sale, the content and distribution of prospectuses and other offering documents (and, where relevant, short form profile or introductory documents) and supplementary documents prepared in the offering?\textsuperscript{117}

(b) Annual reports?

(c) Other periodic reports?

(d) Shareholder voting decisions?

(e) Advertising of public offerings outside the prospectus?

2. Does the regulatory framework require accurate, sufficiently clear and comprehensive, and reasonably specific and timely disclosure of:

(a) events that are material to the price or value of securities;

\textsuperscript{117} The term “conditions” refers to both any restrictions, or any stipulations, with respect to an offer and the transaction terms.
(b) the most significant risks of investing in the security;\textsuperscript{118} and
(c) important relevant information about the issuer and its activities?

3. Does the regulatory framework require:
   (a) Financial information and other required disclosure in prospectuses, listing documents, annual and other periodic reports, and, where applicable, in connection with shareholder voting decisions, to be of sufficient timeliness to be useful to investors?
   (b) Periodic information about financial position and results of operations (which may be in summary form) to be made publicly available to investors?
   (c) Appropriate measures to be taken (for example, provision of more recent unaudited financial information) when the audited financial statements included in a prospectus for public offerings are not current?

**General Disclosure**

4. In addition to specific disclosure requirements, is there a general requirement to disclose either all material information or all information necessary to keep the disclosures made from being misleading?

**Sufficiency, Accuracy, Timeliness and Accountability for Disclosure**

5. Are there measures available to the regulator (e.g., review, certification,\textsuperscript{119} supporting documentation, sanctions) to address concerns with the sufficiency, accuracy and timeliness of the required disclosures?

6. Does regulation ensure that issuers and others involved in the issuing process, which may include underwriters, directors, authorizing officers, promoters, experts and advisers, are liable for the content of disclosures they make?

**Derogations**

7. Are the circumstances where disclosures may be omitted or delayed limited to trade secrets, similar proprietary information, or other valid business purposes, such as incomplete negotiations?

8. Where there are derogations from disclosure, is regulation sufficient to provide for fulfilment of the objective of full and timely disclosure by allowing for:\textsuperscript{120}
   (a) Temporary suspensions of trading?
   (b) Restrictions on, or sanctions regarding, the trading activities of persons with superior information?

\textsuperscript{118} See footnote 16.

\textsuperscript{119} “Certification” is generally used in conjunction with internal audits of financial statements, but the list is intended to be exemplary and certification could also refer to other certifications.

\textsuperscript{120} In the case of price-sensitive information.
**Cross-Border Matters**

9. If public offerings or listings by foreign issuers are significant within the jurisdiction, are the jurisdiction’s disclosure requirements for such offerings or listings of equity and debt securities by foreign issuers consistent with IOSCO’s International Disclosure Standards for (i) Cross-Border Offerings and Initial Listings by Foreign Issuers and (ii) Cross-Border Offerings and Listings of Debt Securities by Foreign Issuers?\(^{121}\)

**Explanatory Notes**

With respect to a jurisdiction’s disclosure framework, the Key Questions envision that the assessor should take into consideration not only whether the information required to be disclosed is sufficiently clear, comprehensive, reasonably timely, and specific, but also whether the disclosure is made available under circumstances that encourage investors to use this information to make investment and voting decisions. For example, the assessor should take into consideration whether the regulatory regime addresses sales practices, such as “outing” advertising outside of the required disclosure documents that may detract from investors’ reliance upon the required disclosure documents.

*With respect to what may constitute full disclosure in Key Question 2, specific disclosures would be expected to be included for material pieces of information relevant to investors being able to make informed investment decisions. This information should address the most significant risks of investing in the security.*\(^{122}\) Important information about the issuer should include information about:

- those who have a significant interest in an issuer, including certain significant security holders of the issuer;
- those who seek control of an issuer;
- material related party transactions, including transactions involving directors and senior managers of the issuer; and
- director and senior management compensation and risk management practices.

Assessors should assess implementation of Key Question 2 in relation to derivatives which are securities taking into account the specific features of those securities (including the risks related to gearing or leverage).

---

\(^{122}\) *See Disclosure Principles for Public Offerings and Listings of Asset-Backed Securities, supra, Principle XI at p. 33; see also International Disclosure Standards for Cross-Border Offerings and Initial Listings by Foreign Issuers, supra, Item III. D. at p. 12; International Disclosure Principles for Cross-Border Offerings and Listing of Debt Securities by Foreign Issuers, supra, Item III at p. 12.*
With respect to what may constitute comprehensive and specific disclosure requirements for public offerings and listings of asset-backed securities for Key Question 2, assessors should consider whether issuers (or service providers where specified below) are required to do the following:

- Disclose the identities of all parties involved in the transaction and the functions and responsibilities of significant parties.\(^{123}\)
- Disclose all checks and assessments that have been performed or risk assurance practices that have been undertaken by the underwriter, sponsor and/or originator in respect of the underlying asset pool.\(^{124}\)
- Service providers revisit and maintain reports over the life of the product.\(^{125}\)
- Provide initial and ongoing information about underlying asset pool performance;\(^{126}\) the composition and characteristics of the asset pool;\(^{127}\) details regarding significant obligors of pool assets;\(^{128}\) and the creditworthiness of the person(s) with direct or indirect liability to the issuer.\(^{129}\)
- Disclose the structure of the transaction,\(^{130}\) credit enhancements,\(^{131}\) and the use of derivatives.\(^{132}\)
- Disclose all exchanges or regulated markets on which the security is or is intended to be traded.\(^{133}\)

Assessors should also consider whether there are requirements for continuous disclosure of material developments in respect of public asset-backed securities. These requirements may incorporate some or all of the disclosure topics highlighted in the Principles for Ongoing Disclosure for Asset-Backed Securities that are considered appropriate by the regulator taking into account the characteristics of their specific regulatory framework, the characteristics of the issuing entity or the characteristics of the securities involved.\(^{134}\)

With respect to what may constitute “timely disclosure” for purposes of Key Question 2, the Principles for Ongoing Disclosure and Material Development Reporting by Listed Entities issued by the IOSCO Technical Committee provide that the listed entity shall disclose ongoing information on a timely basis, which could require disclosure on an immediate basis for disclosure of material developments, where such a term could be defined to mean “as soon as possible”, promptly or prescribed as a maximum of specified days.\(^{135}\)

\(^{123}\) Id, Principles II and III.
\(^{124}\) See Unregulated Financial Markets and Products, supra, Recommendation #1.2.
\(^{125}\) Id, Recommendation #1.4
\(^{126}\) Id, Recommendation #2.1; and Disclosure Principles for Public Offerings and Listings of Asset-Backed Securities, supra, Principle IV.
\(^{127}\) See Disclosure Principles for Public Offerings and Listings of Asset-Backed Securities, supra, Principle V.
\(^{128}\) Id, Principle VI.
\(^{129}\) See Unregulated Financial Markets and Products, supra, Recommendation #2.1.
\(^{130}\) See Disclosure Principles for Public Offerings and Listings of Asset-Backed Securities, supra, Principle VIII.
\(^{131}\) Id, Principle IX.
\(^{132}\) Id, Principle X.
\(^{133}\) Id, Principle XII.
\(^{134}\) See Principles for Ongoing Disclosure for Asset-Backed Securities, supra, p. 2.
\(^{135}\) Principles for Ongoing Disclosure and Material Development Reporting by Listed Entities, supra, pp. 4–5.
These principles also indicate under the general ongoing obligation approach, disclosure may be subject to delay, which may be granted in some jurisdictions by the competent authority, if the information:

- is confidential under legislation; and
- concerns an incomplete proposal or negotiations or the disclosure of particular information is such as to prejudice the legitimate interests of the entity’s investors; in such cases the listed entity must ensure that the information is kept strictly confidential.\(^\text{136}\)

Finally, in referring to disclosures required on a periodic basis prescribed by law or listing rules, such as quarterly or annual reports, these principles note that “[t]he disclosure obligation may require disclosure of relevant information on an immediate basis even when it belongs to periodic reporting.”\(^\text{137}\)

With respect to what may constitute appropriate delivery of periodic financial information in Key Question 3(b), practices vary among jurisdictions as to the frequency and timing of disclosure of periodic financial information. An affirmative response to Key Question 3(b) is warranted if the periodic financial information is made available on at least a semi-annual basis.

With respect to what may constitute general disclosure in Key Question 4, a general disclosure requirement will provide that all material information relevant to a particular security or issuer is required to be disclosed. Another approach for such a general disclosure requirement is that disclosure is required of all material information that is necessary to keep disclosures made from being misleading.\(^\text{138}\)

With respect to assessing Key Question 6, and depending on the circumstances, persons taking responsibility may include the issuer, underwriters, directors, authorizing officers, promoters, and experts and advisers consenting to be named as such.\(^\text{139}\)

With respect to what may constitute Derogations in Key Questions 7 and 8, assessors should recognize that there are circumstances in which it may be necessary to the proper functioning of the market to allow something less than full disclosure: for example, of trade secrets or incomplete negotiations. In the limited circumstances where the market requires some derogation from the objective of full and timely disclosure, there may need to be temporary suspensions from trading or restrictions on the trading activities of those who possess more complete information. In such circumstances, trading should be prohibited in the absence of full disclosure.

---

\(^{136}\) Id.

\(^{137}\) Id.

\(^{138}\) Reference should also be made to so-called “merit based” regulation in which the regulator takes some responsibility for assessing the quality of a proposed offering. This approach is generally associated with developing markets and may be of particular benefit where a market lacks a group of analysts and advisers who could analyze information if it were made publicly available. It is therefore, generally regarded as transitional and not necessary in a fully developed market.

**PRINCIPLES RELATING TO ISSUERS**

**Benchmarks**

*Fully Implemented*

Requires affirmative responses to all applicable Questions. If there are no derogations to disclosure, then Questions 7, 8(a) and 8(b) can be considered inapplicable.

*Broadly Implemented*

Requires affirmative responses to all applicable Questions except to Questions 1(e) and 3(c).

*Partly Implemented*

Requires affirmative responses to all applicable Questions except to Questions 1(c), 1(e), 3(c), 7 (where derogations are provided for) and 9.

*Not Implemented*

Inability to respond affirmatively to one or more of Questions 1(a), 1(b), 1(d), 2(a), 2(b), 2(c), 3(a), 3(b), 4, 5, 6, 8(a) or 8(b) (where derogations are provided for).
**Principle 17**  
Holders of securities in a company should be treated in a fair and equitable manner.

By seeking to safeguard the fair and equitable treatment of shareholders (particularly in connection with voting decisions and change of control transactions), this Principle supports investor protection and fair, efficient and transparent markets.

This Principle requires an assessment as to whether the basic rights of shareholders are protected and whether shareholders within a class are treated equitably.

Principle 17 addresses many of the same issues that are covered by Principles I and II of the *Principles of Corporate Governance* of the Organization for Economic Co-operation and Development (OECD) regarding the rights and equitable treatment of shareholders, particularly in connection with voting decisions, takeover bids, and other transactions that may result in a change in control or that may consolidate control.\(^{140}\)

Regulation which safeguards the fair and equitable treatment of shareholders should require disclosure of the security holdings of management and of those persons who hold a substantial beneficial ownership interest in a company. This is generally regarded as information necessary to make informed investment decisions.

The level at which disclosure is required varies from jurisdiction to jurisdiction, but is generally set at a level well below that which would be characterized as a controlling interest. More stringent disclosure requirements may be appropriate for persons contemplating exercise of control.

The nature of the disclosure required also varies, but full public disclosure is generally thought to best meet the underlying policy rationale of disclosure where a change in control of a company has occurred or is contemplated. Regulation should have regard to the information needs of the shareholders of the subject company.

The information necessary to enable informed decision-making will vary with the nature of the transaction but the general objective remains true for cash offers, offers by way of tender and exchange, business combinations and privatizations.

Generally, in the circumstances described in the preceding sentence, this will require that shareholders of a company:

- have reasonable time in which to consider any offer under which a person would acquire a substantial interest in the company;
- are supplied with adequate information to enable them to assess the merits of any proposal under which a person would acquire a substantial interest in the company;
- as far as practicable, have reasonable and equal opportunities to participate in any benefits accruing to the shareholders under any proposal under which a person would acquire a substantial interest in the company;

\(^{140}\) This could include issuer bids as well as tender offers.
PRINCIPLES RELATING TO ISSUERS

• receive fair and equal treatment (in particular, minority shareholders) in relation to the proposal; and

• are not unfairly disadvantaged by the treatment and conduct of the directors of any party to the transaction or by the failure of the directors to act in good faith in responding to or making recommendations with respect to the proposal.

The relationship between Principles 16 and 17 requires some explanation. While Principle 16 seeks to ensure that investors are provided with timely disclosure about changes in corporate control (as set out in the Explanatory Notes on Key Question 2), Principle 17 seeks to ensure shareholders are provided with sufficient and timely information about transactions which involve a change of control in a way that enables them to exercise rights in relation to those transactions.

Key Issues

Rights of Shareholders

1. The basic rights of equity shareholders are:
   
   (a) The right to document\textsuperscript{141} and transfer ownership.
   
   (b) The right to participate on an informed basis in voting decisions (if the securities have voting rights).
   
   (c) The right to participate equitably in dividends and other distributions, when, as and if declared, including distributions upon liquidation.
   
   (d) The right to pass upon changes in the terms and conditions of rights attaching to their shares.
   
   (e) The right, as far as practicable, to have reasonable and equitable opportunities to participate in any benefits accruing to the shareholders under any proposal under which a person would acquire a substantial interest in the company.
   
   (f) The right to hold a company’s management accountable for their actions including their involvement or oversight which results in breaches of the law.
   
   (g) The right to receive fair and equitable treatment (in particular, treatment of minority shareholders) including in relation to proposals described in 1(e) and in relation to bankruptcy or insolvency of the company.

   Control

2. To safeguard fair and equitable treatment of shareholders, regulation should require disclosure of:
   
   (a) Changes in controlling interests and substantial shareholdings above a specified threshold and transactions which result or may result in changes in controlling interest and substantial shareholdings above a specified threshold.

\textsuperscript{141} Register or perfect.
PRINCIPLES RELATING TO ISSUERS

(b) Information necessary to informed decision-making with respect to tender offers, takeover bids, and other transactions intended to effectuate a change of control or that potentially may result in a change of control, or that may consolidate control.

(c) Shareholdings of directors and senior management.\(^{142}\)

(d) Shareholdings of those persons who hold a substantial beneficial ownership interest in a company.

Key Questions

Rights of Shareholders

1. Does the regulatory and legal frameworks address the rights and equitable treatment of shareholders in connection with the following:

(a) Voting:

(i) For election of directors?

(ii) On corporate changes affecting the terms and conditions of their securities?

(iii) On other fundamental corporate changes?

(b) Timely notice of shareholder meetings and voting decisions?

(c) Procedures that enable beneficial owners to give proxies or voting instructions efficiently?

(d) Ownership registration (in the case of registered shares) and transfer of their shares?

(e) Receipt of dividends and other distributions, when, as, and if declared?

(f) Transactions involving:

(i) A takeover bid?

(ii) Other change of control transactions?

(g) Holding the company, its directors and senior management accountable for their involvement or oversight resulting in violations of law?

(h) Bankruptcy or insolvency of the company?\(^{143}\)

2. Is full disclosure of all information material to an investment or voting decision required in connection with shareholder voting decisions generally and the transactions referred to in Questions 1(a)(iii), 1(f)(i) and 1(f)(ii) specifically?

\(^{142}\) See definition in the Explanatory Notes.

\(^{143}\) This may affect the value of a listed security; shareholders should be able to determine and to exercise their rights in the event of a liquidation or insolvency.
Control

3. With respect to transactions referred to in Question 1(f)(i) and 1(f)(ii), are shareholders of the class or classes of securities affected by the proposal:
   (a) Given a reasonable time in which to consider the proposal?
   (b) Supplied with adequate information to enable them to assess the merits of the proposal?
   (c) As far as practicable, given reasonable and equitable opportunities to participate in any benefits accruing to the shareholders under the proposal?
   (d) Given fair and equitable treatment (in particular, minority security holders) in relation to the proposal?
   (e) Not unfairly disadvantaged by the treatment and conduct of directors of any party to the transaction or by the failure of the directors to act in good faith in responding to or making recommendations with respect to the proposal?

4. With respect to substantial holdings of voting securities:
   (a) Is information about the identity and holdings of persons who hold a substantial (well below controlling) beneficial ownership interest in a company required to be disclosed in a timely manner:
      (i) In public offering and listing particulars documents?
      (ii) Once the ownership threshold requiring disclosure has been reached?
      (iii) At least annually (e.g., in the issuer’s annual report)?
   (b) Is it mandatory for material changes in such ownership and other required information to be disclosed in a timely manner?
   (c) Are these disclosure requirements applicable to two or more persons acting in concert even though their individual beneficial ownership might not have to be disclosed?

5. With respect to holdings of voting securities by directors and senior management:
   (a) Is information about the beneficial ownership interest and material changes in beneficial ownership in a company required to be disclosed in a timely manner?
   (b) Is such information available:
      (i) In public offering and listing particulars documents?
      (ii) At least annually (e.g., in the issuer’s annual report)?
   (c) Is the legal infrastructure sufficient to ensure enforcement of and compliance with these requirements?
Cross-Border

6. If public offerings or listings by foreign issuers are significant within the jurisdiction, does the jurisdiction require disclosure in foreign issuers’ offering and listing particulars documents of any governance provisions or information relating to the foreign issuer’s jurisdiction that may materially affect the fair and equitable treatment of shareholders?\textsuperscript{144}

Explanatory Notes

Concerns regarding the issues treated by this Principle often arise in connection with potentially disparate treatment of majority and minority shareholders, or takeover bids and other change in control transactions where shareholders’ rights are affected.

Key Issue 1 sets forth the basic rights of shareholders which should be protected. Corporate governance may be addressed by general law, authorized exchange, or regulated trading system rules, or a code of practice as well as securities laws and regulations.

The term “directors and senior management” includes (a) the company’s directors, (b) members of the administrative, supervisory and management bodies, and (c) nominees to serve in any of the aforementioned positions. The persons covered by the term “administrative, supervisory or management bodies” vary in different countries and, for purposes of complying with the disclosure standards, will be determined by the host country.\textsuperscript{145}

With respect to Key Questions 4(a)(i), 4(a)(ii), 4(a)(iii) and 4(b), practices vary among jurisdictions regarding the threshold that constitutes substantial ownership required to be disclosed (e.g., 5% or 10%) as well as the timeliness (e.g., 7 or 10 calendar or business days) and frequency of disclosure and the thresholds for, and frequency and timeliness of disclosure of, change in substantial ownership. Nevertheless, when such disclosures involve an actual or proposed change in control transaction, it is appropriate to look to the Explanatory Notes under Principle 16 for guidance regarding timely disclosure in such circumstances.

With respect to Key Questions 4(a)(i), 4(a)(ii), 4(a)(iii), 5(b)(i) and 5(b)(ii), the timeliness of the ownership disclosure called for obviously will be affected by the timeliness of filing and/or public availability of the document in which the information is included. However, the assessor also should consider whether the ownership information disclosed in such a document is as of a date reasonably close to the date of filing and/or public availability of the document.

Benchmarks

Fully Implemented

Requires affirmative responses to all applicable Questions.

Broadly Implemented

Requires affirmative responses to all applicable Questions except to Question 1(c).

\textsuperscript{144} \textit{International Disclosure Standards for Cross-Border Offerings and Initial Listings by Foreign Issuers}, supra, Parts IX A and X A and B.
PRINCIPLES RELATING TO ISSUERS

Partly Implemented

Requires affirmative responses to all applicable Questions except to Questions 1(b), 1(c), 1(g), 1(h), 3(e), 4(a)(iii), 4(c), 5(b)(ii) and 6.

Not Implemented

Inability to respond affirmatively to one or more of Questions 1(a)(i), 1(a)(ii), 1(a)(iii), 1(d), 1(e), 1(f)(i), 1(f)(ii), 2, 3(a), 3(b), 3(c), 3(d), 4(a)(i), 4(a)(ii), 4(b), 5(a), 5(b)(i) or 5(c).

145 Id, p. 7. Disclosure of holdings of directors and senior management in a group is sufficient in lieu of disclosure of individual holdings, provided, however, that Key Question 4 would apply regarding separate disclosure of substantial ownership interests of individual directors and senior management.
This Principle supports the objectives of investor protection and fair, efficient and transparent markets. It does this by requiring that financial statements are prepared in accordance with high quality and internationally acceptable accounting standards. Use of these standards, in turn, seeks to ensure the information provided in financial statements is comprehensive, consistent, relevant, reliable and comparable and so supports investors in making investment decisions, regardless of the geographic location of the entity concerned.

Regulation should seek to ensure the following:

- Financial statements are prepared by issuers.
- Those statements are prepared in accordance with accounting standards which are of a high quality and are internationally acceptable.
- An appropriate mechanism exists for the setting of these standards for use in preparing financial statements such that, where there is some dispute or uncertainty, standards can be the subject of authoritative and timely interpretation that fosters consistent application.
- A regulatory framework for enforcing compliance with accounting standards.

This Principle should be considered and assessed in conjunction with Principle 16, which requires full, timely and accurate disclosure of financial information material to investment decisions. The assessor should establish under Principle 16 whether the financial statements required in public offering and listing particulars documents and periodic reports are sufficient to meet the full, accurate and timely disclosure requirement, and then assess, under Principle 18, the quality of the accounting standards used in their preparation and verification.

In relation to Principles 16 to 18, assessors should assess how the Methodology applies to the set of disclosure and accounting requirements which prevail and thus have broad application in the jurisdiction in respect of public offerings, and publicly listed and traded securities. Specific accounting or disclosure requirements which apply to specialized markets or limited categories of market participants should not affect how a jurisdiction is assessed with respect to these Principles. Such differing requirements could be associated with, for example: the

---

146 Financial statements provide information about the financial position, financial performance (including results of operations and cash flow) and other information (such as changes in the ownership equity of an enterprise) that is useful to a wide range of users for decision making purposes.

147 Financial statements also show the accountability of management for the resources entrusted to them.

overall level of disclosure; individual versus consolidated financial statements; financial statement footnotes; or reporting on internal controls.

**Key Issues**

1. Regulation should require that issuers prepare audited financial statements in accordance with accounting standards which are of a high quality and are internationally acceptable. High quality, internationally acceptable accounting standards are essential to enhance the comparability and reliability of financial statements for informed decision-making.

2. There should be an appropriate mechanism for the setting and interpretation of high quality internationally acceptable accounting standards.

3. These high quality, internationally acceptable accounting standards should be enforceable and enforced.

**Key Questions**

1. Are issuers required to include audited financial statements in:
   (a) Public offering and listing documents?\textsuperscript{150}
   (b) Publicly available annual reports?

2. Do the required audited financial statements include:
   (a) A balance sheet or statement of financial position?
   (b) A statement of the results of operations?
   (c) A statement of cash flow?
   (d) A statement of changes in ownership equity or comparable information included elsewhere in the audited financial statements or footnotes?

3. With respect to the financial statements required in public offering and listing documents and publicly available annual reports:
   (a) Are these required to be prepared and presented in accordance with a comprehensive body of accounting standards?
   (b) Do these accounting standards require financial statements to
      (i) Be comprehensive?
      (ii) Be designed to serve the needs of investors?

\textsuperscript{150} There may be some circumstances, e.g., in a CIS that has not yet raised funds and an offering of a securitized product, where financial statements are unnecessary. In such circumstances, the regulator may require other information deemed relevant to the terms of such offerings.
(iii) Reflect consistent application of accounting standards?

(iv) Be comparable if more than one accounting period is presented?

(c) Are the prevailing accounting standards of an internationally acceptable quality?

4. Where unaudited financial statements are used, for example, in interim reports, and interim period financial statements in public offering and listing documents, in full or summary format, are the financial statements presented in accordance with accounting standards that are of a high and internationally acceptable quality?

5. In regard to oversight, interpretation and independence with respect to accounting standards:

(a) Does the regulatory framework provide for an organization responsible for the establishment and timely interpretation of accounting standards?

(b) If yes, are the organization’s processes open and transparent, and, if the organization is independent, is the standard setting or interpretation process undertaken in cooperation with, or subject to oversight by, the regulator or another body that acts in the public interest?

6. Is there a system for enforcing compliance with accounting standards?

7. If public offerings or listings by foreign issuers are significant within the jurisdiction, does the regulator permit the use of high quality, internationally acceptable accounting standards by foreign companies that wish to list or offer securities in the country?  

Explanatory Notes

In order to be considered comprehensive for the purposes of Key Question 3(a), the accounting standards under which annual financial statements are prepared should require footnotes that (a) present information about the basis of preparation of the financial statements and the significant accounting policies used in preparing them, and (b) include all material information required to be disclosed by such standards that is not presented elsewhere in them. The assessor should determine whether and how the standards are enforced.

The accounting standards referred to under Key Question 3 and parts of Key Question 5 need not be standards that are established or interpreted by an organization within the jurisdiction. Some jurisdictions may wish to adopt and rely upon standards established and/or interpreted by international or other standards-setting organizations. In such circumstances, however, it is essential that a jurisdiction have a regulatory framework in place that provides a mechanism to

---

ensure effective implementation and enforcement of these standards. A jurisdiction’s implementation and enforcement mechanisms need not rely upon the regulator or other enforcement authorities organized within the jurisdiction; however, if third party enforcement is utilized, it is essential that the regulatory framework within the jurisdiction provides that the regulator or another body that acts in the public interest is capable of overseeing the enforcement process and ensuring that the process is binding upon companies whose securities are publicly offered or publicly traded within the jurisdiction, and external auditors practising within the jurisdiction.

In assessing whether adequate mechanisms are in place for enforcing compliance with accounting standards under Key Question 6, assessors may take into account requirements that where financial statements deviate from accepted standards they must be restated or otherwise corrected.

**Benchmarks**

*Fully Implemented*

Requires affirmative responses to all applicable Questions.

*Broadly Implemented*

Requires affirmative responses to all applicable Questions except to Questions 5(b) and 7.

*Partly Implemented*

Requires affirmative responses to all applicable Questions except to Questions 2(c), 4, 5(b), and 7.

*Not Implemented*

Inability to respond affirmatively to one or more of Questions 1(a), 1(b), 2(a), 2(b), 2(d), 3(a), 3(b), 3(c), 5(a) or 6.

F. PRINCIPLES FOR AUDITORS, CREDIT RATING AGENCIES, AND OTHER INFORMATION SERVICE PROVIDERS

1. Preamble

These Principles are about information that investors may rely on when making investment decisions. They differ from the Principles on issuers in that they relate to information that is not generally prepared by issuers themselves. Within modern financial markets, entities exist that analyze, evaluate, or provide assurance of information for investors about issuers, or their securities, in order to help investors with their investment decisions.

For the purposes of the IOSCO Principles, such entities are called “information service providers”. These analytical, evaluative or audit services can take the form of opinions on:

- the fair presentation or true and fair view of issuers’ financial statements;
- the issuers’ credit worthiness or expected financial performance; or
- other important aspects of issuers’ operations, that investors consider material to making investment decisions.

Accordingly, auditors, credit rating agencies (CRAs), and sell-side research analysts are covered by the Principles in this section. Other information service providers may also fall within the scope of these Principles as well.

Principles 19, 20, and 21 relate to auditors and audit standards, and are closely inter-related. They are intended to assist securities market regulatory authorities and other authorities with responsibility for auditor oversight, in developing and enhancing regulatory audit-related structures and requirements. In the jurisdictions where the securities regulator does not have primary responsibility for auditor oversight and standards, it will have an interest in promoting the existence of an oversight system that is consistent with maintaining and enhancing investor confidence in financial statements.

Comprehensiveness, consistency, relevance, reliability, and comparability of financial statements are crucial to informed decision making. Investors need credible and reliable financial statements when making decisions about capital allocations. The public’s perception of the credibility of financial reporting by public issuers is influenced significantly by the perceived effectiveness of external auditors in examining and reporting on financial statements. The reliability of financial information is also enhanced by audits performed by independent auditors, who attest whether the financial statements prepared by management fairly present or provide a true and fair view of the financial position and financial performance of the issuer in accordance with the standards under which they are prepared. The audit report should give an audit opinion concerning compliance with the requirements of the accounting framework, including accounting standards and any “present fairly” or “true and fair view” requirements. Audits should be conducted in accordance with a comprehensive body of high and internationally accepted auditing standards and by auditors that are subject to effective oversight and that are independent of the entities they audit, in both fact and appearance.
Principles 22 and 23 relate respectively to CRAs and other information service providers but are not closely inter-related. CRAs can play an important role in modern capital markets by opining on the credit risk of issuers of securities and their financial obligations. Because CRAs can play an important role in securities markets, the activities of CRAs are of interest to investors, issuers, market intermediaries, and financial regulators. Securities regulators, in particular, frequently have a dual interest in the activities of CRAs, both because CRAs may have an effect on market transparency and because some jurisdictions allow credit ratings to be used for regulatory purposes.

In addition to CRAs, other entities exist which provide analytical or evaluative services of various types to investors to assist them with assessing the desirability of a particular investment opportunity. An example of one such entity that provides analytical or evaluative services is “sell-side” securities analysts employed by the research departments of full-service investment firms such as broker-dealers and investment banks who offer research to both retail and institutional investors. Such sell-side securities analysts can face conflicts of interest that may compromise their abilities to offer investors independent, unbiased opinions. Other types of entities that provide analytical or evaluative services may also face conflicts of interest as well, which may be similar or quite different, depending on the nature of the provider and/or the information services they provide.

2. **Scope**

Principles 19 to 21 are intended to apply to those that provide auditing services for issuers whose securities are listed, publicly offered or traded (public issuer).

Principle 22 is intended to apply to all CRAs that provide rating services in respect of issuers’ securities that are sold to investors. CRAs should be subject to adequate levels of oversight, the nature of which may depend on the structure of the market, the structure of the CRA industry in a given jurisdiction, how credit ratings are used in a given jurisdiction, and the corresponding regulatory risks CRAs may pose. Where credit ratings are used for regulatory purposes in a jurisdiction, “adequate levels of oversight” will mean some form of registration and ongoing supervision.

Principle 23 is intended to apply to entities other than auditors or CRAs that also provide analytical or evaluative services of various types to investors to assist them with assessing the desirability of a particular investment opportunity. This would include sell-side analysts.
Principles Relating to Auditors, Credit Rating Agencies, and Other Information Service Providers

3. **Principles 19 through 23**

<table>
<thead>
<tr>
<th>Principle 19</th>
<th>Auditors should be subject to adequate levels of oversight.</th>
</tr>
</thead>
</table>

Effective oversight of those performing audit services is critical to the reliability and integrity of the financial reporting process, and helps reduce the risks of financial reporting and auditing failures in the public securities market. The ultimate purpose of such oversight is to protect the interests of investors and further the public interest in the preparation of informative, true, fair, and independent audit reports.

There are benefits to an auditor oversight system that is not based exclusively or predominantly on self-regulation. Oversight of auditors can occur in several ways, including within audit firms, by professional organizations and public or private sector oversight bodies, and through government oversight. Within a jurisdiction, auditors should be subject to oversight by a body that acts, and is seen to act, in the public interest. Regulation should, among other things, seek to ensure:

- audit work is conducted pursuant to high and internationally acceptable standards;
- rules are designed to promote the independence of the auditor;
- there are mechanisms for enforcing compliance with auditing standards; and
- audits are performed with a high degree of objectivity.

**Key Issues**

1. Auditors should be subject to oversight by a body that acts, and is seen to act, in the public interest. While the nature of an auditor oversight body and the process through which it carries out its activities may differ among jurisdictions, effective oversight generally includes the following mechanisms or processes that:153

   (a) Require that the auditors have proper qualifications and professional competency before being licensed to perform audits.

   (b) Withdraw authorization to perform audits if proper qualifications and competency are not maintained.

   (c) Require that auditors are independent of the enterprises they audit, both in fact and in appearance.

   (d) Provide oversight over the quality of auditing, and implementation of auditing, independence and ethical standards, as well as quality control environments.154

---

PRINCIPLES RELATING TO AUDITORS, CREDIT RATING AGENCIES, AND OTHER INFORMATION SERVICE PROVIDERS

(c) Require auditors to be subject to the discipline of an auditor oversight body that is independent of the audit profession, or, if the professional body acts as the oversight body, is overseen by an independent body.

(f) Require that regular reviews be conducted by the auditor oversight body of audit procedures and practices of firms that audit the financial statements of public issuers. Reviews should be conducted on a recurring basis, and should be designed to determine the extent to which audit firms have and adhere to adequate quality control policies and procedures that address all significant aspects of auditing.

(g) Require an auditor oversight body to also address other matters such as professional competency, rotation of audit personnel, employment of audit personnel by audit clients, consulting and other non-audit services, and other matters as deemed appropriate.

(h) Require an auditor oversight body to have the authority to stipulate remedial measures for problems detected, and to initiate and/or to carry out disciplinary proceedings to impose sanctions on auditors and audit firms, as appropriate.

Key Questions

1. Does the regulatory system provide a framework for overseeing the quality and implementation of auditing, independence, and ethical standards, including the quality control environments in which auditors operate?

2. Are auditors required to be qualified and competent pursuant to minimum requirements before being licensed to perform audits, and to maintain professional competency?

3. Is there an oversight body that operates in the public interest, has an appropriate membership, an adequate charter of responsibilities and powers, and adequate funding, such that the oversight responsibilities are carried out in a manner independent of the auditing profession?

4. Does the auditor oversight body have an established process for performing regular reviews of audit procedures and practices of firms that audit financial statements of public issuers?

5. Are there standards and processes for regular assessments by the oversight body to assess whether the auditor is and remains independent, both in fact and in appearance, of the enterprises that it audits?

6. If the oversight process is performed in coordination with similar quality control mechanisms that are in place within the audit profession, does the oversight body: maintain control over key issues such as, the scope of reviews, access to, and retention of, audit work papers and other information needed in reviews; and follow up the outcome of reviews?
(b) Are reviews conducted on a recurring basis, and designed to determine the extent to which audit firms have, and adhere to, adequate quality control policies and procedures that address all significant aspects of auditing?

7. Does the auditor oversight body have the authority to stipulate remedial measures for problems detected, and to initiate, and/or carry out, disciplinary proceedings to impose sanctions on auditors and audit firms, as appropriate?

Explanatory Notes

Oversight of auditors can occur in several ways, including within audit firms; by professional organizations; by public or private sector oversight bodies; or through government oversight. The use of the term “oversight body” should be interpreted broadly. In some jurisdictions, there is a specific organization that is charged to act in the public interest to oversee auditors and which has been granted certain powers, including rule-making authority, as well as the power to carry out inspections and discipline auditors. In other jurisdictions, there may be two or more organizations that share responsibility for fulfilling the same objectives. Regardless of the structure, the auditor oversight framework should not be based exclusively or predominantly on self-regulation. A mechanism should exist to require auditors to be subject to the discipline of an auditor oversight body that is independent of the audit profession, or, if a professional body acts as the oversight body, is overseen by an independent body.

The “significant aspects of auditing” referred to in Key Question 6(b) include:

- Independence, integrity and ethics of auditors.
- Objectivity of audits.
- Selection, training, and supervision of personnel.
- Acceptance, continuation, and termination of audit clients.
- Audit methodology.
- Audit performance (i.e., compliance with applicable generally accepted auditing standards).
- Consultation on difficult, contentious, or sensitive matters and resolution of differences of opinion during audits.
- Second partner reviews of audits.
- Communications with management, supervisory boards, and audit committees of audit clients.
- Communications with bodies charged with oversight over the financial reporting process.
- Provisions for continuing professional education.
- Professional competency.
- Rotation of audit personnel.
PRINCIPLES RELATING TO AUDITORS, CREDIT RATING AGENCIES, AND OTHER INFORMATION SERVICE PROVIDERS

• Employment of audit personnel by audit clients.
• Consulting and other non-audit services.155

Benchmarks

Fully Implemented

Requires affirmative responses to all applicable Questions.

Broadly Implemented

Requires affirmative responses to all applicable Questions except to Question 6(b).

Partly Implemented

Requires affirmative responses to all applicable Questions except to Questions 4 and 6(b).

Not Implemented

Inability to respond affirmatively to one or more of Questions 1, 2, 3, 5, 6(a) or 7.

155 Principles for Auditor Oversight, supra, p. 4.
Independent auditors play a critical role in enhancing the reliability of financial information by attesting as to whether the financial statements prepared by management fairly present, or provide a true and fair view of, the financial condition and past performance of the issuer in compliance with accepted standards.

An external auditor plays a critical role in lending independent credibility to published financial statements used by investors, creditors, and other stakeholders as a basis for making capital allocation decisions. The public’s perception of the credibility of financial reporting by public issuers is influenced significantly by the perceived effectiveness of external auditors in examining and reporting on financial statements. A fundamental element of this public confidence is that external auditors operate, and are seen to operate, in an environment that supports objective decision-making on key issues having a material effect on financial statements. For this to happen, auditors must be independent of the entities they audit, in both fact and appearance.

Standards of independence for auditors of public issuers should be designed to promote an environment in which the auditor is free of any influence, interest, or relationship that might impair professional judgment or objectivity or, in the view of the reasonable investor, might impair professional judgment or objectivity. Robust independence standards that are consistently applied and enforced are a necessary element in reassuring the investing public that auditors are in a position to exercise objective judgment in concluding on management’s representations in an entity’s financial statement.156

Key Issues

1. The regulatory framework should be designed to foster auditor independence and oversight of an auditor’s independence.

2. Standards of external auditor independence should establish a framework of principles, supported by a combination of prohibitions, restrictions, other policies and procedures and disclosures, which address at least the following threats to independence:

   (a) self-interest;
   (b) self-review;
   (c) advocacy;
   (d) familiarity; and
   (e) intimidation.

---

3. Independence should include appropriate rotation of the auditor and/or the audit engagement team, such that senior member(s) of a team do not remain in key decision-making positions for an extended period.

4. In case of public issuers, regardless of the particular legal structure in a jurisdiction, a governance body that is in both appearance and fact independent of management of the company being audited (e.g., audit committee, board of corporate statutory auditors or other body independent of the entity’s management) should oversee the process of selection and appointment of the external auditor.

5. Prompt disclosure to the public should be required when an auditor of a public issuer is replaced.

6. The governance structure of public issuers should contribute to the monitoring and safeguarding of the independence of its external auditor.

Key Questions

1. Does the regulatory framework set standards for the independence of external auditors?

2. Do the standards contain restrictions relating to audit firms and individuals within the audit firm regarding financial, business or other relationships with an entity that the firm audits?

3. Do the standards address the following:
   (a) self-interest?
   (b) self-review?
   (c) advocacy?
   (d) familiarity?
   (e) intimidation?

4. Are there regulatory standards that govern the provision of non-audit services to an entity that an audit firm audits?

5. Are auditors required to establish and maintain internal systems, governance arrangements, and processes for monitoring, identifying and addressing threats to independence, including the rotation of auditors and/or senior member(s) of the audit engagement team, and ensuring compliance with the standards?

6. From the perspective of public issuers:
   (a) Is the external auditor required to be independent in both fact and appearance of the entity being audited?
   (b) Is there a governance body independent in both fact and appearance of the management of the entity (e.g., audit committee, board of corporate statutory auditors or other body independent of the entity’s management) that oversees the process of selection and appointment of the external auditor?
PRINCIPLES RELATING TO AUDITORS, CREDIT RATING AGENCIES, AND OTHER INFORMATION SERVICE PROVIDERS

(c) Are governance standards intended to promote and contribute to the monitoring and safeguarding of the independence of the external auditor?

(d) Is prompt disclosure of information about the resignation, removal, or replacement of an external auditor required?

7. Is there an adequate mechanism in place for enforcing compliance with auditor independence standards, for example: to stipulate remedial measures for problems detected and to initiate and carry out disciplinary proceedings to impose sanction on auditors and audit firms as appropriate; to refuse to accept, or require revision of, audit reports; or for lack of independence?

Explanatory Notes

When considering how the regulatory framework is designed to address auditor independence and adequate oversight of an auditor’s independence, the following more specific points are relevant:

- Standards of independence should identify appropriate measures that the auditor should implement in order to address any threats to independence that arise within permissible activities and relationships.

- Standards of independence should be supported by rigorous requirements for audit firms to establish and maintain internal systems and processes for monitoring, identifying, and addressing threats to independence and ensuring compliance with relevant standards, regulations, prohibitions and restrictions.

- Standards of independence should require the auditor to identify and evaluate all significant, or potentially significant, threats to independence, including those arising from recent relationships with the entity being audited that may have preceded the appointment as auditor, and demonstrate how the auditor has addressed such significant threats.

Benchmarks

Fully Implemented

Requires affirmative responses to all applicable Questions.

Broadly Implemented

Requires affirmative responses to all applicable Questions except to Question 5.

Partly Implemented

Requires affirmative responses to all applicable Questions except to Questions 4 and 5.

Not Implemented

Inability to respond affirmatively to one or more of Questions 1, 2, 3(a), 3(b), 3(c), 3(d), 3(e), 6(a), 6(b), 6(c), 6(d) and 7.
Principle 21  Audit standards should be of a high and internationally acceptable quality

High quality auditing standards help safeguard the integrity of an issuer’s financial statements. Auditing standards are necessary safeguards of the reliability of financial information, such standards should be comprehensive, well-defined and of a high and internationally acceptable quality. They are a necessary counterpart to high quality and internationally accepted accounting standards and their application in audits contributes to providing investors with accurate and relevant information on financial performance.

Regulation regarding audit standards should require:

- An independent verification of financial statements and compliance with accounting principles through professional external auditing.
- An appropriate mechanism for the setting of quality standards and to ensure that where there is some dispute or uncertainty, standards can be the subject of authoritative and timely interpretation that is consistently applied.
- Any audit is conducted pursuant to standards of a high and internationally acceptable quality.

Key Issues

1. Regulation should require that financial statements prepared by public issuers be audited in accordance with a comprehensive set of auditing standards.

2. Such auditing standards should be of high and internationally acceptable quality in order to contribute to the quality of financial reporting and reliability of financial information, and thereby support investor confidence and decision-making.

3. There should be an appropriate mechanism for the setting and interpretation of the auditing standards.

4. There should be a regulatory framework for enforcing compliance with auditing standards.

Key Questions

1. Does the regulatory framework require that financial statements included in public offering and listing particulars documents, and publicly available annual reports, be audited in accordance with a comprehensive set of auditing standards?

2. Are the prevailing auditing standards of a high and internationally acceptable quality?

3. (a) Does the regulatory framework provide for an organization responsible for the establishment and timely updating of auditing standards?
(b) If yes, are the organization’s processes open, transparent and subject to public oversight, and, if the organization is independent, is the standard setting and interpretation process undertaken in cooperation with, or subject to oversight by, the regulator or another body that acts in the public interest?

4. Is there an adequate mechanism in place for enforcing compliance with auditing standards?

Explanatory Notes

This Principle should be considered and assessed in conjunction with Principle 16, which requires full, timely, and accurate disclosure of financial information material to investment decisions, and Principle 18, which requires the use of accounting standards of a high and internationally acceptable quality. The assessor should establish under Principles 16 and 18 whether the financial statements required in public offering and listing particulars documents, and periodic reports are sufficient to meet the full, accurate and timely disclosure requirement, and then assess, under Principle 21, the auditing standards used in their verification.

The auditing standards referred to above need not be standards that are established or interpreted by an organization within the jurisdiction. Some jurisdictions may wish to adopt and rely upon standards established and/or interpreted by international or other standards-setting organizations.

Benchmarks

Requires affirmative responses to all applicable Questions except to Questions 3(a) and 3(b).

Not Implemented

Inability to respond affirmatively to one or more of Questions 1, 2 or 4.
Credit rating agencies (CRAs) can play an important role in modern capital markets. CRAs typically opine on the credit risk of issuers of securities and their financial obligations. Given the vast amount of information available to investors today – some of it valuable, some of it not – CRAs can play a useful role in helping investors and others sift through this information, and analyze the credit risks they face when lending to a particular borrower or when purchasing an issuer’s debt and debt-like securities.

Because CRAs can play an important role in securities markets, the activities of CRAs are of interest to investors, issuers, market intermediaries, and financial regulators. Securities regulators, in particular, frequently have a dual interest in the activities of CRAs, both because CRAs may have an effect on market transparency and because some jurisdictions allow CRA ratings to be used for regulatory purposes.

Because CRAs can play an important role in helping market participants incorporate into their decision-making voluminous, diverse, and highly complicated information about a particular investment, regulators, market participants and CRAs themselves have an interest in ensuring that CRAs carry out this role in an honest and fair manner. Where credit ratings are used for regulatory purposes – for example, permitting regulated entities to use ratings of a security as part of a net capital assessment, or requiring that fund managers only include securities rated above a certain level in some types of funds – the regulator’s interest in the activities of these CRAs may be even greater.

Accordingly, CRAs should be subject to adequate levels of oversight, the nature of which depends on:

- the structure of the market;
- the structure of the CRA industry in a given jurisdiction;
- how credit ratings are used in a given jurisdiction; and
- the corresponding regulatory risks CRAs pose.

Where credit ratings are used for regulatory purposes in a jurisdiction, “adequate levels of oversight” of the CRA issuing those ratings will mean some form of registration and ongoing supervision albeit, as noted below, not necessarily by the regulator in whose jurisdiction the ratings are used.
Key Issues

1. IOSCO has developed a *Statement of Principles Regarding the Activities of Credit Rating Agencies* ("CRA Principles"), which are designed to “be a useful tool for securities regulators, CRAs, and others wishing to improve how CRAs operate and how the opinions CRAs assign are used by market participants.”\(^{157}\) To take into account the varying size and business models of CRAs, the manner in which the principles were to be implemented was left open. The CRA Principles contemplate that a variety of mechanisms could be used, including both market mechanisms and regulation. Following publication of the CRA Principles, some commentators, including a number of CRAs, suggested that it would be useful if IOSCO were to develop a more detailed and specific code of conduct to provide guidance to CRAs for implementing the objectives of the CRA Principles. In response, IOSCO developed a *Code of Conduct Fundamentals for Credit Rating Agencies* (the “IOSCO Code”) to which IOSCO Technical Committee members expect CRAs will give full effect.\(^{158}\) As with the CRA Principles, the IOSCO Code is not designed to be rigid or formulaic, and is designed to offer CRAs a degree of flexibility in how its measures are incorporated into their individual codes of conduct, according to each CRA’s specific legal and market circumstances. The IOSCO Code calls for CRAs to disclose how each provision of the IOSCO Code is adopted in the CRA’s own code of conduct, explain if and how their own codes deviate from the IOSCO Code, and how such deviations nonetheless achieve the objectives set forth in the CRA Principles and the IOSCO Code.

2. The IOSCO CRA Principles and the IOSCO Code “articulate four objectives that CRAs, regulators, issuers and other market participants should strive to achieve.”\(^{159}\) The four objectives are designed to encourage the adoption of procedures and mechanisms that promote:

   (a) the quality and integrity of the rating process;
   (b) CRA independence and avoidance of conflicts of interest;
   (c) providing investors with timely information about, and the procedures, methodologies and assumptions, behind a rating; and
   (d) the protection of non-public information from premature disclosure or use by the CRA or its employees that is unrelated to a CRA’s rating activities.

---

PRINCIPLES RELATING TO AUDITORS, CREDIT RATING AGENCIES, AND OTHER INFORMATION SERVICE PROVIDERS

3. An oversight regime designed to achieve these objectives may take many different forms. In some cases, a jurisdiction may decide that these objectives may be best implemented through internal CRA mechanisms and promoted by borrowers, lenders and other market participants. In other cases, a jurisdiction may decide that the objectives may be best achieved through regulatory requirements. As a result, mechanisms for implementing the objectives may take the form of any combination of:

(a) government regulation;
(b) regulation imposed by non-government statutory regulators;
(c) industry codes; and
(d) internal rating agency policies and procedures.

4. Where a CRA’s ratings are used for regulatory purposes, however, the regulatory system should establish mechanisms that seek to achieve the above objectives through registration and oversight requirements that impose binding and enforceable obligations on CRAs.

Key Questions

Registration:

1. Does the jurisdiction have a definition of “credit rating” and/or “credit rating agency” or otherwise define a scope of activities for the purpose of imposing registration and supervision requirements on entities that engage in the business of determining and issuing credit ratings that are used for regulatory purposes?

2. Are CRAs located in the jurisdiction and whose ratings are used for regulatory purposes in the jurisdiction subject to registration (“regulated CRAs”)?

3. Do the jurisdiction’s registration requirements provide the regulator with the ability to obtain all information it deems necessary from a CRA seeking registration in order to determine whether the requirements for registration have been fulfilled?

4. If a CRA’s ratings are used for regulatory purposes but the CRA itself is not located in the regulator’s market and the regulator does not require registration or oversight of the CRA in question, has the regulator made a reasonable judgment to ensure that the CRA is subject to registration and oversight as required by Principle 22?

Ongoing Supervision:

2. Do the jurisdiction’s requirements provide the regulator with the ability to obtain all information about a regulated CRA that the regulator deems necessary to perform adequate oversight of the regulated CRA?
(b) Are CRAs whose ratings are used for regulatory purposes in the jurisdiction, and who are located in the jurisdiction:

(i) supervised on an ongoing basis;

(ii) subject to examination by the regulator; and

(iii) subject to enforcement of the jurisdiction’s requirements?

Registering Authority:

3. Does the regulator have the power to:

(a) Refuse to register a CRA if the registration requirements have not been met, and to withdraw, suspend or condition a registration or authorization in the event of a failure of a regulated CRA to meet relevant requirements?

(b) Impose adequate measures and sanctions to address a failure of a regulated CRA to meet relevant requirements?

Oversight Requirements: Quality and Integrity

4. Does oversight of regulated CRAs incorporate requirements that address whether:

(a) Regulated CRAs adopt and implement written procedures and methodologies designed to ensure that:

(i) they issue initial credit ratings based on a fair and thorough analysis of all information known to the CRA that is relevant to its analysis according to the CRA’s published rating methodology; and,

(ii) except for credit ratings that clearly indicate they do not entail ongoing surveillance, the regulated CRA updates credit ratings as new information becomes available in accordance with the regulated CRA’s published rating methodology for monitoring credit ratings?

(b) Regulated CRAs maintain internal records to support their credit ratings?

(c) Regulated CRAs have sufficient resources to carry out high-quality credit assessments?

Oversight Requirements: Conflicts of Interest

5. Does oversight of regulated CRAs incorporate requirements that address whether:

(a) Regulated CRA credit rating decisions are independent and free from political or economic pressures and from conflicts of interest arising due to the regulated CRA’s ownership structure, business or financial activities, securities or derivatives trading, or the financial interests of the regulated CRA’s employees (including securities and derivatives trading by the employees and their compensation arrangements)?

(b) Regulated CRAs (1) identify, and (2) eliminate, or manage and disclose, as appropriate, any actual or potential conflicts of interest that may influence:

(i) the opinions and analyzes regulated CRAs produce; or
PRINCIPLES RELATING TO AUDITORS, CREDIT RATING AGENCIES, AND OTHER INFORMATION SERVICE PROVIDERS

(ii) the judgment and analyzes of the individuals the regulated CRAs employ, who have an influence on ratings decisions?

(c) Regulated CRAs disclose actual and potential conflicts of interest arising from the nature of compensation arrangements for producing credit ratings?

Oversight Requirements: Transparency and Timeliness

6. Does oversight of regulated CRAs incorporate requirements that address whether:

(a) Regulated CRAs distribute their credit ratings in a timely manner?

(b) Regulated CRAs disclose credit ratings on a non-selective basis?

(c) Regulated CRAs publish sufficient information about their procedures, methodologies and assumptions, so that outside parties can understand how a rating was arrived at by the regulated CRA, and the attributes and limitations of such a rating?

(d) Regulated CRAs publish sufficient information about the historical default rates of their credit ratings, so that interested parties can understand the historical performance of their credit ratings?

Oversight Requirements: Confidential Information

7. Does oversight of regulated CRAs incorporate requirements that address whether CRAs protect non-public information:

(a) provided by issuers so that such information is only used for the purposes related to their rating activities; and

(b) with respect to pending rating actions?

Explanatory Notes

CRAs vary considerably in their size, scope of operations, and business models. Depending on these factors, not all regulatory issues may be present in every jurisdiction, and regulators should be afforded flexibility when assessing the regulatory issues CRAs raise in their own markets. Regulators also approach the regulatory issues raised by CRAs in different ways, with (for example) some approaching oversight of CRAs as a natural or de facto oligopoly that is regulated in a fashion similar to a “utility,” while others may emphasize increasing competition in the CRA market. The approach chosen by regulators may have an effect on the emphasis they place on the different regulatory issues outlined above.

Legal systems vary in structure and specific provisions between jurisdictions. However, they embed implementation measures in varying degrees in order to achieve the objectives of the four IOSCO CRA Principles (quality and integrity of the ratings process, management of conflicts, transparency, and treatment of confidential information).
In respect of Key Questions 4 – 7, there may be different ways of ensuring that these Questions can be answered affirmatively. For example, regulated CRAs may be subject to: regulatory provisions on the national level that set forth the objectives themselves; conditions to become registered, or maintain registration, that promote the objectives; requirements to establish policies and procedures designed to achieve the objectives; or disclosure requirements that promote the objectives.

In respect of Key Question 1(d), given the structure of the global CRA industry at the time of adoption of this Methodology, there will be jurisdictions where credit ratings are used for regulatory purposes where the relevant CRA is located (in the sense of physical presence) in a different jurisdiction. In such cases, steps may have been taken to reduce the use of such credit ratings for regulatory purposes. Where the use of credit ratings for regulatory purposes has not been eliminated, the regulator should be able to demonstrate that it has made a reasonable judgment not to register or oversee the CRA, based on factors such as:

- the activities of the CRA in the jurisdiction;
- the regulatory arrangements in the home jurisdiction.

Alternatively, in place of a registration requirement, the regulator may impose some oversight or reporting requirements and make arrangements for supervisory cooperation with the regulator which registers the CRA.

In respect of Key Question 4(c), regulated CRAs should have sufficient resources to determine credit ratings according to their published and documented ratings methodologies, including sufficient personnel to properly assess the entities they rate, seek out information they need in order to make an assessment, and analyze all the information relevant to their decision-making processes.

In respect of Key Question 6(b), the non-selective disclosure of credit ratings means the disclosure of credit ratings which are consistent with the regulated CRA’s business model. For example, a regulated CRA operating under the subscriber-pay model may disclose its credit ratings only to persons who pay to access the credit ratings.

**Benchmarks**

*Fully Implemented*

Requires affirmative responses to all applicable Questions.

*Broadly Implemented*

Requires affirmative responses to all applicable Questions except to Questions 4(a), 4(c), 5(c) and 6(a).

---

The Key Questions are based on the principles set forth in the CRA Principles. The *Regulatory Implementation of the Statement of Principles Regarding the Activities of Credit Rating Agencies*, supra, describes the implementation undertaken in regulatory programs in various, different jurisdictions in order to give effect to the IOSCO CRA Principles.
PRINCIPLES RELATING TO AUDITORS, CREDIT RATING AGENCIES, AND OTHER INFORMATION SERVICE PROVIDERS

Partly Implemented

Requires affirmative responses to all applicable Questions except to Questions 1(c), 4(a), 4(b), 4(c), 5(c), 6(a), 6(b), 6(c), 6(d), 7(a), and 7(b).

Not Implemented

Inability to respond affirmatively to one or more of Questions 1(a), 1(b), 1(d), 2(a), 2(b), 3(a), 3(b), 5(a), or 5(b).
Objective

In many markets, entities exist which provide analytical or evaluative services of various types to investors to assist them with assessing the desirability of a particular investment opportunity. Depending on the degree to which the regulatory system relies on them, or the impact their activities have on the market, such entities may need to be subject to regulation or oversight. An example of one such entity that provides analytical or evaluative services is “sell-side” securities analysts employed by the research departments of full-service investment firms (such as broker-dealers and investment banks) who offer research to both retail and institutional investors. Such sell-side securities analysts can face conflicts of interest that may compromise their ability to offer investors independent unbiased opinions. Other types of entities that provide analytical or evaluative services may also pose risks to the users of these services, or to the integrity of the market, and therefore may warrant oversight and regulation. Oversight and regulation of these entities may also be warranted if the regulatory system relies on the services they provide.

Key Issues

1. Entities that provide analytical or evaluative services to investors, such as sell-side securities analysts, provide investors with valuable insights by distilling the wide range of information that is available to the markets. IOSCO has recognized that “sell-side” securities analysts, in particular, can face conflicts of interest that may compromise their ability to offer investors independent unbiased opinions. Biased research can harm investors and undermine the fairness, efficiency and transparency of the markets. Because of concerns that sell-side securities analyst conflicts of interest pose problems for investor protection and market integrity, IOSCO has developed principles regarding sell-side securities analyst conflicts of interest.161

2. Among the principle regulatory concerns regarding sell-side securities analysts, is the opportunity for fraud and deception, but also the risks posed to investors by hidden conflicts of interest.

3. The key issues the regulator should consider when determining whether entities that provide analytical or evaluative services should be subject to oversight and regulation include:

   (a) the type of analytical or evaluative services that these entities provide;

---

the impact of their services on a given market with regard, in particular, to the potential risks that their activities pose to the users of these services or to the integrity of the market, specifically with respect to potential conflicts or the integrity of the service;

(c) whether the services offered by these entities are relied on for regulatory purposes and, if so, to what degree; and

(d) where the regulator determines that the services provided by a type of entity have enough impact on the market to warrant oversight, whether, and to what extent, regulation or oversight is necessary to help address identified risks.

Key Questions

1. Does the regulator periodically consider whether the different types of entities that provide analytical or evaluative services warrant regulation and oversight because of the impact of their activities on the market or because of the degree to which the regulatory system relies on them?

2. Where the regulator identifies the need for regulation and oversight, is the regulation and oversight put into place appropriate to the risks posed by these types of entities?

3. With respect to sell-side securities analysts:

   (a) Does regulation contain provisions directed at eliminating, avoiding, managing or disclosing conflicts of interest that can arise from:

      (i) Analysts’ trading activities or financial interests?

      (ii) The trading activities or financial interests of the entities that employ them?

      (iii) The business relationships of the entities that employ them?

      (iv) The reporting lines for analysts and their compensation arrangements?

   (b) Does regulation contain provisions directed at an entity’s compliance systems and senior management responsibility:

      (i) Requiring written internal procedures or controls to identify and eliminate, manage or disclose actual and potential analyst conflicts of interest?

      (ii) Requiring procedures to eliminate or manage the undue influence of issuers, institutional investors and other outside parties upon analysts?

      (iii) Requiring complete, timely, clear, concise, specific, and prominent disclosures of actual and potential conflicts of interest?

   (c) Does regulation contain provisions directed at integrity and ethical behaviour, such as requiring analysts, and/or the firms that employ analysts, to act honestly and fairly with clients?162

---

162 Assessors should recognize that issues relating to ethics and integrity can be addressed by a variety of mechanisms, including “fit and proper” requirements, statutory disqualification, industry and SRO codes of conduct, etc.
Explanatory Notes

The entities that could be covered by this principle could be quite broad. Jurisdictions will vary considerably in their assessments of the risks posed by different types of entities that provide analytical or evaluative services, and even in their determination of what type of entity would fall within this Principle. Furthermore, depending on the jurisdiction’s laws, some entities that provide analytical or evaluative services may be regulated by bodies other than the securities regulator. Likewise, some jurisdictions may restrict the authority of the government to regulate certain types of entities that provide analytical or evaluative services if the services they provide are viewed as particularly critical (possibly with laws against fraud rather than regulation used to shield against egregious conflicts of interest or deception). These differences in approach to regulating such entities should be deemed acceptable.

With regard to Key Questions 1 and 2, to date, the only entities offering investors analytical or evaluative services that IOSCO has identified, and for which it has developed principles or standards, are sell-side securities analysts.

There is overlap between Principle 23 and both Principle 7 (Perimeter of Regulation) and Principle 8 (Conflicts of Interest). Principle 23 can be viewed as a subset of both Principle 7 and Principle 8, insofar as conflicts of interest and other potentially problematic practices by information service providers can pose particular risks to investor protection and market integrity. Consequently, it is possible that a regulator addresses Principle 23 through its general review of the perimeter of regulation and conflicts of interest in the market.

There is also overlap between Principle 23 and Principle 7 insofar as the regulator does not have the legal authority to regulate an information service provider that it identifies as presenting a significant risk to the market’s integrity. In such cases, Principle 7 is more applicable insofar as the regulator identifies the risk, and legislative authority to address it is sought.

Benchmarks

Fully Implemented

Requires affirmative responses to all applicable Questions.

Broadly Implemented

Requires affirmative responses to all applicable Questions except Question 3(c).

Partly Implemented

Requires affirmative responses to all applicable Questions except Questions 3(b)(iii) and 3(c).

Not Implemented

Inability to respond affirmatively to one or more of Questions 1, 2 (where relevant because of the outcomes of the review in Question 1) and 3(a), 3(b)(i), and 3(b)(ii).

163 For example, laws protecting freedom of the press or freedom of speech may limit the degree to which some entities are regulated in some jurisdictions.

G. PRINCIPLES RELATING TO COLLECTIVE INVESTMENT SCHEMES AND HEDGE FUNDS

1. Preamble

Principles 24 to 27 relating to Collective Investment Schemes

The legal form taken by collective investment schemes (CIS) varies between jurisdictions, but in all jurisdictions they play an important role, channelling resources to the securities markets and offering investors a means to achieve diversified exposure to investment opportunities. To the extent that investors place their money in CIS, appropriate regulation is increasingly important.

Proper regulation of CIS is critical to the objectives of investor protection and the preservation of confidence in the market.

CIS, like other investment vehicles, are subject to disclosure requirements. However, investors in CIS rely upon operators of the CIS to manage the CIS and its investment portfolio and to act in their best interests. CIS are widely marketed to retail investors, who may place enhanced reliance on CIS operators and, therefore, may be vulnerable to misconduct by CIS operators. Regulation should promote and ensure a high level of compliance by entities involved in CIS operations.

Regulation of CIS should cover:

- the eligibility, governance, organization and operational conduct of the CIS operator;
- adherence to the terms of the prospectus and other constituent documents;
- the proper safekeeping of investors’ funds and the assets of the CIS;

But not the wisdom of investment decisions (where these are within the terms of the constituent documents).

Supervision should seek to ensure that the assets of a CIS are managed in the best interests of its investors, and in accordance with the CIS objectives and the regulation to which it is subject. This will include:

- ensuring promotion of high standards of competence, integrity and fair dealing;
- that the assets are held in safekeeping on behalf of investors; and
- having mechanisms in place to confirm that the investments of the CIS are valued properly.

Supervision of a CIS operator in this regard includes oversight of arrangements to ensure that investors are exposed to a level of risk that is consistent with the CIS’ objectives, as well as to ensure that any regulatory minimum level of diversification is maintained.

---

Principle 28 relating to Hedge Funds

Historically, IOSCO has not included hedge funds within the definition of CIS. This approach recognizes the different ways in which IOSCO members regulate hedge funds and that hedge funds traditionally have been offered to institutional or other sophisticated investors. Some IOSCO members regulate hedge funds as CIS and therefore apply some or all CIS Principles in the hedge fund field, while others do not. Therefore, Principle 28 deals separately with hedge funds.

Hedge funds play an important role in global capital markets. They can provide price efficiency, and risk distribution, can contribute to the further global integration of financial markets, and can offer diversification benefits. They are a source of continuous product change and innovation, potentially enhancing the liquidity and resilience of financial systems worldwide.\(^{166}\)

Hedge funds may however pose a number of risks to market integrity, investor protection, and financial stability. This may be the result of different factors, including a lack of transparency regarding the fund, its strategy and asset allocation; conflicts of interest between fund managers and other market participants and difficulties in valuing complex financial instruments employed or held by hedge funds.

Potential risks posed by hedge funds are magnified when financial markets are suffering from stress or instability. Hedge funds may use leverage and, should a problem arise, the concentrated unwinding of their positions could cause major dislocation and potential disorderly pricing of markets. Failures in hedge funds may have a contagion effect on the wider market through the banks/prime brokers that they use as counterparties. They may increase systemic risks and directly impact on the real economy through disruptions to payment and clearing services.

Potential risks posed by hedge funds need to be mitigated through appropriate oversight of hedge funds and/or hedge fund managers/advisers. Regulatory oversight should be more focused on systemically important and/or higher risk hedge fund managers in a risk-based manner.

2. Scope

Taking into account the different approaches mentioned in the Preamble above, separate Principles have been established by IOSCO for the assessment of the regulation of CIS and the regulation of hedge funds and/or hedge fund managers/advisers.

Principles 24 to 27 relating to Collective Investment Schemes

Principle 24 requires regulation to set standards for those involved in the operation of a CIS and marketing CIS interests; Principle 25 is mainly devoted to client asset protection; Principle 26 addresses CIS-focused disclosure requirements; and Principle 27 deals with the issues of asset valuation and pricing and redemption of CIS units/shares.

Principles 24 to 27 are interrelated and complement each other and should be appropriately implemented to seek to ensure proper investor protection. In addition, assessment under Principle 26, dealing with disclosure, should be consistent with, and/or compared to, the assessment of disclosure obligations as set forth under the Principles for Issuers.\textsuperscript{167}

The term “CIS operator” is intended as the legal entity that has overall responsibility for management and performance of the functions of the CIS, which may include managing the CIS portfolio of assets and operational services.\textsuperscript{168}

The term “CIS” includes open-ended funds that will redeem their units or shares (whether on a continuous or periodic basis). It also includes closed-ended funds whose shares or units are traded on regulated or organized markets. The term “CIS” also includes exchange-traded funds (ETFs), which generally are open-end funds that trade throughout the day on an exchange.\textsuperscript{169}

The rules governing the legal form and structure of CIS vary across jurisdictions.

In some jurisdictions, closed-ended funds are not subject to special licensing or supervisory requirements and are, instead, regulated according to the terms of relevant exchange listing rules. If this is the case in the assessed jurisdiction, the situation should be duly accounted for, and a detailed explanation and assessment of the applicable listing rules should be undertaken taking into account the investor protection objectives of the Key Issues in this Section.

In many jurisdictions, the requirements relating to CIS vary according to whether the CIS is offered to the public. In fact, most jurisdictions tend to reduce regulatory oversight in relation to private placements. The definition of what amounts to an offer to the public varies. The assessor should not attempt to substitute his or her judgment for what constitutes a public offering but should indicate: which offerings are included and subject to the full panoply of requirements; and how regulatory oversight is different for private placements or non-retail offerings. The assessor should explain the differences in treatment and assess the consequences from an investor protection viewpoint – investor protection being the main objective of the CIS Principles.

Where appropriate, the assessor should make reference to the assessment of Principle 7.

An increasing number of CIS are marketed across jurisdictional boundaries. It is also common for CIS promoters, managers and custodians to be located in several different jurisdictions and not the same jurisdiction as investors to whom the CIS is promoted. Therefore, particular attention should be paid to the possible need for international cooperation and the interrelation with Principles 13 to 15 relating to cooperation.

The assessor should determine the type and complexity of CIS in the jurisdiction, the number of CIS in existence, the assets under management, the types of permitted investments and level of gearing or leverage to gauge the regulatory challenge. It is possible that a specific jurisdiction will not have its own framework for the establishment of CIS. If a jurisdiction does not have its own CIS regulatory framework, it may not wish to admit offerings that do not meet the basic requirements as to legal format in these Principles. To the extent CIS established

\textsuperscript{167} Principles 16–18.
\textsuperscript{169} ETFs thus are included in the scope of this Methodology and should be subject to appropriate CIS operator qualifications, legal form and structure and custody, disclosure and valuation/redemption requirements.
under other jurisdictions’ laws may be offered, the assessor should consider whether:

- the entity engaged in marketing should be authorized, recognized or otherwise eligible (Principle 24);
- there are requirements concerning the public offer of CIS products (Principles 24, 26 and 27);
- there is adequate information sharing between the jurisdictions of establishment and the jurisdiction being assessed.

The greater the level of CIS activity in a particular jurisdiction, the more likely it is that each of the Principles 24 to 27 should be rated as Not Implemented rather than Not Applicable if no requirements are applied to cross-border business.

Securities law and regulation cannot exist in isolation from the other laws of a jurisdiction. Matters of particular importance to the legal framework in general are set out in Appendix 1. To determine whether Principles 24 to 27 are implemented in a manner that achieves their objectives, it is therefore necessary to consider the jurisdiction’s legal framework in that regard and, in particular, laws and regulations on insolvency (having an impact on the treatment of CIS in default), as well as laws and regulations on dispute resolution mechanisms or other remedies (having an impact on investors’ ability to seek redress or compensation).

Principle 25 relating to Hedge Funds

Principle 28 is the only Principle of this section applicable to the assessment of hedge fund regulation. IOSCO acknowledges that there is no consistent or agreed-upon definition of the term “hedge fund”. Previous IOSCO work recognized that an approach for identifying these types of entities is to look at the kinds of characteristics of, and strategies employed by, institutions that would consider themselves to be hedge funds. On this basis, IOSCO has considered as “hedge funds” investment schemes displaying a combination of some of the following characteristics:

- borrowing and leverage restrictions (which are typically included in CIS regulation) are not applied and many (but not all) hedge funds use high levels of leverage;
- significant performance fees (often in the form of a percentage of profits) are paid to the manager in addition to an annual management fee;
- investors are typically permitted to redeem their interests periodically, e.g., quarterly, semi-annually or annually;
- often significant “own” funds are invested by the manager;
- derivatives may be used, often for speculative purposes, and there is an ability to short sell securities; and
- more diverse risks or complex underlying products are involved.170

Hedge funds have traditionally been offered to non-retail investors but are offered to retail investors in some jurisdictions.

---

170 See Hedge Funds Oversight, supra, pp. 4–5.
Despite the broad characteristics described above, it is difficult to define hedge funds on a universal basis, given their different legal and business structures – not only across different jurisdictions but even within a single jurisdiction. Therefore, the application of Principle 28 may vary depending on the manner in which each jurisdiction defines and regulates hedge funds.
Investor protection is the key objective. CIS operators and CIS should meet clearly defined standards as set by the regulatory system, for both initial approval and continuing operation.⁷¹

The eligibility standards and operating conditions to act as CIS operators should seek to ensure that those who operate or market CIS are qualified to do so. This includes standards as set out by the regulatory system on honesty and integrity of the CIS operator and being experienced and competent to operate, or advise, on the suitability of a CIS. These standards should also cover CIS governance and internal organization of CIS operators, including having accounting procedures, an adequate risk management framework, including effective liquidity risk management processes, and resources and processes in place to ensure ongoing compliance.⁷²

There should be effective mechanisms to assess compliance with these standards and with the policies and procedures the CIS operator has in place.⁷³

CIS governance should provide for a framework that seeks to ensure that a CIS is organized and operated in the interests of CIS investors and, where there might be conflict between the interests of CIS investors and persons connected with the CIS, not in the interests of the connected persons. In order to ensure that CIS operators do not breach their duties, it is fundamental that their organization and activity is subject to at least annual review by an independent auditor and/or ongoing review and oversight by an independent third party.

The appropriate identification, monitoring and management of risks and compliance or internal control policies and procedures by CIS operators should be ensured, and should be appropriate and proportionate to the size, complexity and risk profile of the CIS.

To assist in supervision and to promote compliance, there should also be clear responsibilities for maintaining records of the operations of the CIS.

---

⁷³ Although a CIS operator should comply with the eligibility criteria from the commencement of its activities, different approaches may be adopted by the regulator regarding when to assess compliance with those standards, provided that the mechanisms in place are effective in terms of investor protection. See also Explanatory Notes.
The operation of a CIS raises the potential for conflict between the interests of investors in the CIS and those of CIS operators or their associates. The regulatory system should seek to ensure that CIS operators identify the potential conflicts of interest and properly manage any conflicts that do arise by taking corrective actions (including, where appropriate, through disclosure).

In all cases, CIS operators should act in the best interests of CIS investors and in accordance with the principle of fair treatment of investors. Generally, this will require regulation covering — in addition to the issues mentioned above (CIS governance, internal organization, accounting procedures, recordkeeping, and risk management) — topics such as due diligence in the selection of CIS investments and conduct of business, including best execution, appropriate trading and timely allocation of transactions, commissions and fees, related party transactions and underwriting arrangements.  

Many CIS operators delegate certain CIS operational responsibilities to third-parties. The use of delegates should not, in any way, be permitted to diminish the effectiveness of the primary regulation and supervision of a CIS. A delegate should comply with all regulatory requirements applicable to the conduct of the principal’s business activities. A CIS operator should remain responsible for the delegate’s compliance.

The regulatory system should require supervision throughout the life of a particular CIS. Supervision of a CIS operator should promote high standards of competence, integrity, and investor protection. There should be clear powers with respect to:

- registration/authorization of a CIS;
- inspections to be carried out in order to ensure compliance by CIS operators;
- investigations of suspected breaches;
- remedial action to be taken in the event of breach or default; and
- cooperation with foreign regulators for the purposes of registration/authorization of a CIS, supervision and enforcement.

These powers should be sufficient to allow action in respect of all supervised entities with responsibilities under the CIS.

177 The registration or authorization of CIS may take the form of document filing, CIS registration, or approval of the parties to the CIS (such as the operator and custodian) as appropriate to the overall regulatory system. See Report on Investment Management, supra.
Key Issues

Eligibility Criteria

1. The regulatory system should require CIS operators and CIS to comply with clear criteria for both initial approval and continuing operation.\textsuperscript{178} The eligibility criteria to act as a CIS operator, as set out by the regulatory system, should include requirements on the internal organization of the CIS operator, including risk management mechanisms encompassing \textit{inter alia} liquidity risk management, internal controls and accounting procedures, and CIS governance. There should be effective mechanisms to assess compliance of the CIS operator with the eligibility criteria and with the policies and procedures it has in place.

2. The regulator should have clear responsibility and powers with respect to authorization/registration of CIS.\textsuperscript{180} The authorization/registration of CIS should have regard to the possible need for international cooperation.

Supervision and Ongoing Monitoring

3. Records of the business and internal organization of the CIS operator should be maintained. The records should be made available to the regulator upon request.

4. The regulator should apply proper supervision throughout the life of a particular CIS. Supervision should promote high standards of competence, integrity, and investor protection.

5. There should be clear powers to allow action in respect of all supervised entities with responsibilities under the CIS and to share information with foreign securities regulators for both supervision and enforcement.

Conflicts of Interest and Operational Conduct

6. The regulatory system should set standards of conduct to be complied with on an ongoing basis by CIS operators, including due diligence in the selection of CIS investments.\textsuperscript{181} CIS operators should act in the best interests of CIS investors and in accordance with the principle of fair treatment of investors.\textsuperscript{182}

7. The regulatory system should seek to ensure that the risk of conflicts of interest arising is minimized and that any conflicts that do arise are properly identified and managed by taking appropriate actions, including where appropriate through disclosure.

\textsuperscript{178} See \textit{Report on Investment Management}, supra, p. 8: operators and schemes must meet clearly defined standards as set out by the regulatory authority for both initial approval and continuing operation.

\textsuperscript{179} The term “eligibility” is intended to include authorization, licensing, registration or other preconditions to operating or marketing a CIS: see \textit{Report on Investment Management}, supra, p. 7. The CIS operator should comply with the eligibility criteria from the commencement of its activities (irrespective of whether the marketing of the CIS is made in an active or a passive way, or through private placement), but different approaches may be adopted regarding when compliance with those criteria is assessed by a regulator.

\textsuperscript{180} Includes the operator and/or the pool. See \textit{Report on Investment Management}, supra, p. 11.

\textsuperscript{181} An operator should act with due skill, care and diligence and has a duty to make decisions as to the investment portfolio structure and administrative procedures of the CIS so as to secure its objectives: \textit{Report on Investment Management}, supra, pp. 7–8.

Delegation

8. The use of delegates should not, in any way, be permitted to diminish the effectiveness of the primary regulation and supervision of a CIS. The CIS operator remains responsible for the functions it delegates. The CIS operator should not be allowed to delegate its functions to the extent that it becomes an empty box.

9. A delegate should be accountable either directly or through the delegator for compliance with all regulatory requirements applicable to the conduct of the principal’s business activities.

Key Questions

Eligibility Criteria

1. Does the regulatory system set standards for the eligibility of those who wish to:
   (a) Market a CIS?  
   (b) Operate a CIS?

2. Do the eligibility criteria for a CIS operator include the following:
   (a) Honesty and integrity of the operator?
   (b) Having appropriate and sufficient human and technical resources to ensure that it is capable of carrying out the necessary functions of a CIS operator?
   (c) Financial capacity of the CIS or the CIS operator that would allow the launching and operation of the CIS in appropriate conditions?
   (d) Ability to perform specific powers and duties?
   (e) Having, or employing, appropriate identification, monitoring and management of risks, based on, among other things, the size, the complexity and the risk profile of the CIS?
   (f) Having internal controls and compliance arrangements sufficient to ensure it can carry out its business diligently, effectively, honestly and fairly?

---

183 With respect to market intermediaries that may be involved in marketing or operating a CIS, such as brokers, dealers and investment advisers, see also Principles 29 to 32 on Market Intermediaries regarding approaches to regulation of such intermediaries. For a discussion pertaining to the marketing of a CIS, see Investment Management Risk Assessment: Marketing and Selling Practices, supra; Performance Presentation Standards for Collective Investment Schemes: Best Practice Standards, supra.

185 Includes the operator and/or the pool. Key Question 2 refers to the eligibility criteria that need to be complied with by a CIS operator from the commencement of its activities, whereas Key Question 3 refers to the assessment of the compliance with those criteria by the regulator.

186 Different regulatory approaches may be adopted on when to assess compliance with the eligibility criteria.

187 A CIS operator has a duty to make decisions as to the investment portfolio structure and administrative procedures of the CIS so as to secure its objectives. The CIS operator must not exceed the powers conferred on it by the CIS’ constituting documents or particulars: see Report on Investment Management, supra.

188 See Principles for the Supervision of Operators of Collective Investment Schemes, supra, p. 15.
3. Does the regulatory system provide for effective mechanisms to assess compliance with the criteria referred to in Questions 2(a) to 2(f)?

4. Does the regulatory system set standards for the CIS governance seeking to ensure that CIS are organized and operated in the interests of CIS investors, and not in the interests of CIS connected persons?

5. Does the authorization/registration of CIS take into account the possible need for international cooperation in the case of CIS marketed across jurisdictions or where promoters, managers, or custodians are located in several different jurisdictions?

**Supervision and Ongoing Monitoring**

6. Is the regulator responsible for monitoring ongoing compliance with the standards applicable to CIS and CIS operators? In particular, does the regulator have clear responsibilities and powers with respect to:
   
   (a) Registration or authorization of a CIS?
   
   (b) Inspections to ensure compliance by CIS operators?
   
   (c) Investigation of suspected breaches?
   
   (d) Remedial action in the event of breach or default?

7. Does the ongoing monitoring involve a review of reports submitted to the regulator with regard to CIS and entities involved in the operation of a CIS (CIS operators, custodians, etc.) on a routine basis or on a risk-assessment basis?

8. Does the ongoing monitoring involve, where appropriate, performance of on-site inspections of entities involved in operating CIS (CIS operators, custodians, etc.)?

9. Do the regulatory authorities proactively perform investigative activities in order to identify suspected breaches with respect to entities involved in the operation of a CIS?

10. Is the operator of a CIS subject to a general and continuing obligation to report to the regulatory authority or investors, either prior to or after the event, any information relating to: material changes in its management or organization, or in the by-laws of the CIS, or the CIS operator?

---

189 There may be different approaches regarding when a regulator assesses compliance with the eligibility criteria: see Explanatory Notes.

191 See Report on Investment Management, supra, p. 11.

192 For example, financial results.

193 The regulatory authority may adopt a risk-based approach in the performance of inspections to ensure compliance by CIS operators.

194 This means activities not prompted by complaint, such as risk-based or periodic inspections, audits or surveillance.
11. Does the regulatory system assign clear responsibilities for maintaining records on the organization and business of the CIS operator? Does the regulatory system provide for the keeping of books and records in relation to transactions involving CIS assets, and all transactions in CIS shares or units?

Conflicts of Interest and operational conduct

12. Are there provisions:

   (a) To prohibit, restrict or manage (including, if appropriate, by disclosure) certain conduct likely to give rise to conflicts of interest between a CIS and its operators or their associates or connected parties?

   (b) To require a CIS operator to seek to minimize potential conflicts of interest and ensure that any conflicts that do arise are identified and properly managed by taking appropriate actions (including, where appropriate, through disclosure) so that the interests of investors are not adversely affected?  

13. (a) Does the regulatory system require the CIS operator to comply with operational conduct standards?

    (b) In particular, is the CIS operator required to act in the best interest of investors and in accordance with the principle of fair treatment?

14. Does the regulatory system address the regulatory issues associated with:

   (a) Best execution?

   (b) Appropriate trading and timely allocation of transactions?

   (c) Churning?

   (d) Related party transactions?

   (e) Underwriting arrangements?

   (f) Due diligence in the selection of investments?

   (g) Fees and expenses, in order to ensure that no unauthorized charges or expenses are levied against a CIS, or CIS investors, and that: commission rebates; soft commission arrangements; and inducements, do not conflict with the CIS operator’s duty to act in the best interest of investors?

   (h) Requirements for CIS operators or CIS to establish and implement sound liquidity risk management processes taking into account normal and stress market conditions?

---

195 See Examination of Governance for Collective Investment Schemes, Part I, supra, pp. 4, 19, 27 and 30; Conflicts of Interests of CIS Operators, supra, pp. 3, 6, 11, 13, 14 and 17.

197 Final Report on Elements of International Regulatory Standards on Fees and Expenses of Investment Funds, supra, pp. 2, 10, 11 and 12; Principles for the Supervision of Operators of Collective Investment Schemes, supra, pp. 1, 7, 8, 14 and 15.
Delegation

15. Does the regulatory system provide for a clear indication of circumstances under which delegation is allowed and is there prohibition of systematic and complete delegation of core functions of the CIS operator to the extent that there is a transformation, gradual or otherwise, into an empty box? 198

16. If delegation is permitted, is the delegation done in such a way so as not to deprive the investor of the means of identifying the company legally responsible for the delegated functions? In particular:

   (a) Is the CIS operator responsible for the actions or omissions, as though they were its own, of any party, to whom it delegates a function, including compliance with the rules of conduct and other operating conditions? 199

   (b) Does the regulatory system require the CIS operator to retain adequate capacity and resources and have in place suitable processes to monitor the activity of the delegate and evaluate the performance of the delegate? 200

   (c) Can the CIS operator terminate the delegation and make alternative arrangements for the performance of the delegated function where appropriate?

   (d) Are there requirements for disclosure to investors in relation to the delegation arrangements and the identity of the delegates?

   (e) Does the regulatory system allow the regulator to take appropriate actions in case of delegations which may give rise to a conflict of interest between the delegate and the investors?

17. If delegation is permitted, is the delegation done in such a way so as not to jeopardize the ability of the regulator to effectively access data related to the delegated functions, either directly through the delegate(s) or through the CIS operator?

Explanatory Notes

Consideration should be given to the ability of the regulator to perform ongoing supervision and to take action in respect of all supervised entities with responsibilities under the scheme for enforcement purposes and, more broadly, to ensure that the objectives of regulation are attained. To this end, where appropriate, the assessor should make reference to the assessment of Principles 10, 11 and 12.

Attention should also be paid to the international features of the CIS business of the assessed jurisdiction. According to the Principles, these elements should not hinder proper supervision. Assessors should take into account whether the regulatory system recognizes the need for possible international cooperation for a CIS’ registration and supervision, in particular in the case of CIS marketed across jurisdictions or where promoters, managers, or custodians are

198 See also Delegation of Functions, supra.
199 See Report on Investment Management, supra, p. 9
200 The degree of monitoring would depend on the extent of the delegation, to whom the delegation was made (e.g., to authorized intermediaries or to others) and the type of jurisdiction in which the delegate is located.
located in several different jurisdictions. Where appropriate, cross reference should be made to the assessment of international cooperation Principles 13, 14, and 15. 201

*With respect to Key Question 2(e),* assessors can consider, for example, the extent to which a CIS operator should have a risk management framework supported by appropriate and documented policies and procedures and by an independent risk management function, proportionate to the size, complexity, and risk profile of the CIS.

*With respect to Key Questions 2 and 3,* assessors should take into account that the eligibility criteria need to be complied with (by a CIS operator) from the commencement of its activities, but there may be different regulatory approaches regarding when to assess eligibility for registration/authorization, including for example the honesty and integrity of CIS operators. Fit and proper testing is not the only means by which regulators can approach honesty and integrity of CIS operators (e.g., statutory disqualifications may offer an acceptable alternative approach). It is not necessary that a regulator assesses compliance with the eligibility criteria at the time of the initial approval in order to comply with Key Question 3. However, the mechanisms in place need to be effective in terms of investor protection so as to ensure that the CIS operator is qualified to market or operate a CIS. In this respect, assessors should consider the entire regulatory system; both the extent to which compliance with eligibility criteria is assessed, by the competent authority, prior to commencement of marketing of a CIS; as well as the existence of a rigorous inspection program designed to effectively monitor compliance with eligibility criteria on an ongoing basis.

*With respect to Key Question 4,* assessors can consider, for example, if the internal organization and activities of a CIS operator are required to be subject to independent review and oversight from an objective and informed perspective.

*With respect to Key Question 6(d),* assessors should consider whether the regulator has adequate powers to protect investors’ interests, including taking actions to withdraw authorization/registration, freeze CIS assets or the CIS operator’s assets, instigate administrative or civil proceedings and recommend criminal action where appropriate. 202 Remedial actions in the event of breach or default should include effective, proportionate and dissuasive sanctions for unlicensed operation of a CIS and/or for violation of CIS operator obligations.

Assessors should also take into account whether the sanctions for unlicensed operation of a CIS and/or for violation of CIS operator obligations are consistently applied in the assessed jurisdiction.

*With respect to Key Questions 8 and 9,* assessors should take into account that, where an entity involved in the operations of a CIS is not subject to the regulation of a securities regulator, the relevant on-site inspections and investigations may be conducted through cooperation with other relevant financial regulators.

*With respect to Key Question 11,* assessors should also consider whether or not proper books and records in relation to the internal organization and business of the CIS are required to be maintained for an appropriate time and in the event of a winding-up. 203

---

201 See also the Preamble to this Section on CIS.
Benchmarks

Fully Implemented

Requires an affirmative response to all applicable Questions.

Broadly Implemented

Requires affirmative responses to all applicable Questions except to Questions 9, 16(d) and 16(e).

Partly Implemented

Requires affirmative responses to all applicable Questions except to Questions 5, 7, 8, 9, 10, 14(a), 14(b), 14(c), 14(d), 14(e), 14(f), 14(g), 15, 16(d), 16(e) and either Question 12(a) or 12(b).

Not Implemented

Inability to respond affirmatively to one or more of Questions 1(a), 1(b), 2(a), 2(b), 2(c), 2(d), 2(e), 2(f), 3, 4, 6(a), 6(b), 6(c), 6(d), 11, 13(a), 13(b), 14(h), 16(a), 16(b), 16(c) or 17 and to both Questions 12(a) and 12(b).
Principle 25  The regulatory system should provide for rules governing the legal form and structure of collective investment schemes and the segregation and protection of client assets.

The legal form and structure of CIS vary among jurisdictions however they are important to the protection of investors. The legal form and structure affects the interests and rights of the participants in the CIS, and enables the pool of investors’ funds to be distinguished and segregated from the assets of other entities and of the operator.

The legal form and structure chosen for CIS has implications for the risk of default or breach associated with the scheme. The regulatory system should require that, on the one hand, the legal form and structure of CIS and, on the other, the implication thereof on the risks associated with the CIS, are disclosed to investors, and ensure that these risks to investors are addressed either through statute, conduct rules or mandatory covenants in the constituent documents of a CIS.

The regulatory system should ensure adequate segregation and protection of client assets, including through use of custodians and/or depositories that are, in appropriate circumstances, independent. Client assets should be interpreted as: assets that are held or controlled on behalf of investors in a CIS, including securities, positions, and, in the case of derivatives, where appropriate, collateral and margin payments.

The regulatory system should recognize the benefits for investor protection and confidence in financial markets of effective mechanisms to protect client assets from the risk of loss and the insolvency of CIS operators.204

As part of its ongoing supervision, the regulator should seek to ensure that within its jurisdiction there are mechanisms which best achieve the overall objective of client asset protection, taking into account its insolvency and investment services laws, regulations and practices, and the objectives of market efficiency and investor protection. 205.

Key Issues

Legal Form/Investors’ Rights

1. The regulatory system should address the legal form of CIS and the nature of the rights and interests of investors. Appropriate disclosure of such form and rights should be provided to investors. Such rights should not be left to the discretion of the CIS operator.

2. Supervision should seek to ensure that any restrictions on type, or level, of investment,206 or borrowing, are being complied with.207

205 Id.
Separation of Assets/Safekeeping

3. The regulatory system should ensure adequate segregation of the pool of investors’ assets from the assets of the CIS operator and of other entities.

4. The regulatory system should ensure that effective mechanisms are in place to protect client assets from the risk of loss and insolvency of the CIS operator and, where third party custodians are used, that client assets are identified as such to any third party custodian and equivalent protection is afforded to such assets.208

5. The risks arising from a default or a breach associated with the legal form and structure chosen for a given CIS should be disclosed to investors.

6. The regulatory system should ensure that the above risks to investors are duly addressed through statutes, rules, or mandatory arrangements.

Key Questions

Legal Form/Investors’ Rights

1. Does the regulatory system provide for requirements as to the legal form and structure of CIS that delineates the interests of participants and their related rights?

2. Does the regulatory system provide that the legal form and structure of a CIS, as well as the implications thereof for the nature of risks associated with the CIS, be disclosed to investors in such a way that they are not dependent upon the discretion of the CIS operator?209

3. Is there a regulatory authority responsible for ensuring that the form and structure requirements are observed?

4. Does the regulatory system provide that where material changes are made to investor rights that do not require prior approval from investors, notice is given to them before the changes take effect?

5. Does the regulatory system provide that where material changes are made to investor rights, notice is given to the relevant regulatory authority?

6. Does the regulator have powers aimed at ensuring that any restrictions on type, or level, of investment, or borrowing, are being complied with?

Separation of Assets/Safekeeping

7. Does the regulatory system require adequate segregation of CIS assets from the assets of the CIS operator and its managers or other entities?210

---

208 See Client Asset Protection, supra, pp. 2–3.
8. Does the regulatory system provide for either of the following requirements governing the safekeeping of CIS assets:
   
   (a) the obligation to entrust the assets to custodians and/or depositaries that are in appropriate circumstances independent; or
   
   (b) special legal or regulatory safeguards in cases where the functions of custodian and/or depositary are performed by the same legal entity as is responsible for investment functions (or related entities).

9. Does the regulatory system provide for adequate protection of client assets from losses or insolvency of the CIS operator, and the obligation that, where third party custodians are used, client assets are identified as such to any such custodian and equivalent protection is afforded to the client assets, including when the custodian has entrusted all or some of the assets in its safekeeping to a third party?

10. Does the regulatory system adequately provide for an orderly winding up of CIS business, if needed?

Explanatory Notes

In evaluating safekeeping, consideration should be given by an assessor to whether the supervisory system in the assessed jurisdiction is capable of ensuring that all CIS investments, including cash deposits, are properly held in safekeeping.

Consideration also should be given to the ability of the system to ensure that the risks of default or breach associated with the scheme are properly addressed. It is important that the interests of CIS investors are duly protected not only while the CIS is a going concern, but also when its continuity is affected by circumstances which require it to be wound up.

The assessor should verify that the regulatory system requires the rights of investors in CIS, or impediments to investors exercising their rights, to be clearly disclosed.

The assessor should also take into account whether supervision of CIS promotes financial stability. In particular, requirements on money market funds (MMFs) should include restrictions on the type of assets that are permitted to be held. To this end, where appropriate, the assessor should make reference to the assessment of Principle 6.

*With respect to Key Question 3*, assessors should consider also whether there is any evidence that the requirements relating to the form and structure of a CIS are enforced in the assessed jurisdiction.

---

211 Where third party custodians are used, there should be separation of the assets of a CIS from the assets of the custodian itself. The liability of a custodian for any losses suffered by the investors as a result of its unjustifiable failure to perform its obligations or its improper performance of them cannot be affected by the fact that it has entrusted to a third party all or some of the assets in its safekeeping: see *Standards for the Custody of Collective Investment Schemes’ Assets*, Final Report, Report of the Board of IOSCO, November 2015, [https://www.iosco.org/library/pubdocs/pdf/IOSCOPD512.pdf](https://www.iosco.org/library/pubdocs/pdf/IOSCOPD512.pdf); *Client Asset Protection*, supra; *Report on Investment Management*, supra.
Benchmarks

Fully Implemented

Requires affirmative responses to all applicable Questions.

Broadly Implemented

Requires affirmative responses to all applicable Questions except to Question 4.

Partly Implemented

Requires affirmative responses to all applicable Questions except to Questions 4 and 5.

Not Implemented

Inability to respond affirmatively to one or more of Questions 1, 2, 3, 6, 7, 8(a) or (b), 9 or 10.
Principle 26 Regulation should require disclosure, as set forth under the principles for issuers, which is necessary to evaluate the suitability of a collective investment scheme for a particular investor and the value of the investor’s interest in the scheme.

This Principle is intended to ensure that matters material to the value of an investment in a CIS are the subject of disclosure to investors and potential investors. Disclosure about a CIS should assist investors in understanding the nature of the investment vehicle and the relationship between risk and return, so that investors evaluating CIS performance do not focus solely on return, but also on the risk assumed to produce the return.\textsuperscript{212} However, investors should be free to choose the level of market risk to which they are exposed.

The goal of disclosure should be to provide investors with sufficient information on a timely basis, in a language and a format that are easy to understand having regard to the type of investor, to evaluate whether and to what extent the CIS is an appropriate investment vehicle for them.\textsuperscript{213}

Disclosure should promote comparability among various CIS.\textsuperscript{214} Where appropriate, disclosure should take into account the specific features of the CIS (e.g. ETFs).

One particular aspect of disclosure requiring close attention is the disclosure of all fees and other charges that may be levied under the CIS. Information on fees and charges should be disclosed to both prospective and current investors in a way that enables the investors to understand their nature, structure and impact on the CIS’s performance.\textsuperscript{215} There should also be clear disclosure of investment policies.\textsuperscript{216}

Advertisements concerning CIS should not contain inaccurate, untrue, or misleading statements.

Key Issues

1. Disclosure should assist investors in understanding the nature of the investment vehicle and the relationship between risk and return.

2. All matters material to a valuation of the CIS, including fees and charges, should be disclosed to investors and potential investors.

\textsuperscript{214} See Performance Presentation Standards for Collective Investment Schemes: Best Practice Standards, supra, p. 5.

\textsuperscript{215} See Final Report on Elements of International Regulatory Standards on Fees and Expenses of Investment Funds, supra, pp. 3–4.

\textsuperscript{216} For a discussion of the obligations to disclose voting practices, see generally Collective Investment Schemes as Shareholders: Responsibilities and Disclosure, supra.
3. Information should be provided on a timely basis and in an easy to understand format and language having regard to the type of investor.

4. There should be clear disclosure of investment policies.

5. Supervision should seek to ensure that the stated investment policy or trading strategy, or any policy required by regulation, is being followed.

6. Advertisements concerning CIS should not contain inaccurate, false or misleading statements and should not detract the investors’ ability to make their own judgment about investing in the CIS.

**Key Questions**

1. Does the regulatory system require that all matters material to the valuation of a CIS are disclosed to investors and potential investors on a timely basis?

2. Does the regulatory system require that the information referred to in Question 1 above be disclosed to investors and potential investors in an easy to understand format and language having regard to the type of investor? \(^{217}\)

3. Does the regulatory system require the use of standard formats for disclosure of offering documents and periodic reports to investors?

4. Does the regulatory system include a general disclosure obligation to allow investors, and potential investors, to evaluate the suitability of the CIS for that investor or potential investor?

5. Does the regulatory system specifically require that the offering documents, or other publicly available information, include the following:
   
   (a) The date of issuance of the offering document?
   
   (b) Information concerning the legal constitution of the CIS?
   
   (c) The rights of investors in the CIS?
   
   (d) Information on the operator and its principals?
   
   (e) Information on the methodology of asset valuation?
   
   (f) Procedures for purchase, redemption and pricing of units/shares?
   
   (g) Relevant, audited financial information concerning the CIS?
   
   (h) Information on the custodial arrangements (if any)?
   
   (i) The investment policy(ies) of the CIS?
   
   (j) Information on the risks involved in achieving the investment objectives?

---

\(^{217}\) See *Disclosure of Risk — A Discussion Paper*, supra, p. 3.
(k) The appointment of any external administrator or investment managers or advisers who have a significant and independent role in relation to the CIS (including delegates)?

(l) Fees and charges in relation to the CIS, in a way that enables investors to understand their nature, structure and impact on the CIS’ performance?²¹⁸

6. Does the regulatory authority have the power to hold back, or intervene, with regard to offering documents? For example, are there regulatory actions available in the event that the information is inaccurate, misleading or false, or does not satisfy the filing/approval requirements?

7. Does the regulatory system cover advertising material outside of the offering documents? In particular, does it prohibit inaccurate, false, or misleading advertising? Are there regulatory actions available to the regulator with regard to advertising material outside of the offering document?

8. Does the regulatory system require that the offering documents be kept up to date to take account of any material changes affecting the CIS?

9. Does the regulatory system require a report to be prepared in respect of a CIS’ activities either on an annual, semi-annual or other periodic basis?

10. Does the regulatory system require the timely distribution of periodic reports?²¹⁹

11. Does the regulatory system require that the accounts of a CIS be prepared in accordance with high quality, internationally acceptable accounting standards?

12. Does the regulator have powers to ensure that the stated investment policy or trading strategy, the authorized investments that the CIS is able to undertake, or any policy required by regulation is being followed?²²⁰

Explanatory Notes

The assessor should cross reference to assessment under Principles 16 to 21 as appropriate. CIS normally target retail investors, therefore, particular attention should be paid to assure the regulatory system is structured to prevent investors being misled by inappropriate presentation of elements (e.g., risks associated with the investment policies and trading strategies of the scheme, reference to past performance, and fees and other charges that may be levied under the scheme). The information should be provided in an easy to understand format and language having regard to the type of investor. Proper consideration should be given by the assessor to the retail nature of CIS business.

For the purposes of Question 5(g), the offering documents, or other publicly available information, may refer to relevant, audited financial information concerning the CIS that is previously or simultaneously provided or made available.

For the purposes of Questions 6, 7 and 12, assessors should also take into account whether there is any evidence of actions taken by the regulator in those areas.
Benchmarks

*Fully Implemented*

Requires affirmative responses to all applicable Questions.

*Broadly Implemented*

Requires affirmative responses to all applicable Questions except to Questions 3 and 10.

*Partly Implemented*

Requires affirmative responses to all applicable Questions except to Questions 3, 5(b), 10 and 11.

*Not Implemented*

Inability to respond affirmatively to one or more of Questions 1, 2, 4, 5(a), 5(c), 5(d), 5(e), 5(f), 5(g), 5(h), 5(i), 5(j), 5(k), 5(l), 6, 7, 8, 9 or 12.

\[218\] See generally Final Report on Elements of International Regulatory Standards on Fees and Expenses of Investment Funds, supra.

\[219\] See also Explanatory Notes.

\[220\] See generally Principles for the Supervision of Operators of Collective Investment Schemes, supra.
**Principle 27** Regulation should ensure that there is a proper and disclosed basis for asset valuation and the pricing and the redemption of units in a collective investment scheme.

Proper valuation of CIS assets is critical to ensure investor confidence in CIS as a reliable and robust investment vehicle, and for proper investor protection, especially in cases where a market price is unavailable. Regulation should seek to ensure that all property of a CIS is fairly and accurately valued, that the net asset value (NAV) of the CIS is correctly calculated, and, where a CIS is allowed to display a stable NAV, it is subject to measures designed to reduce the specific risks associated thereto. The regulatory system should permit the responsible authority to ensure compliance with the relevant rules.

Regulation should require the CIS operator to publish or disclose the price of the CIS on a regular basis to enable the investor, or potential investor, to assess performance over time.

The law or rules governing CIS should enable investors to redeem units or shares on a basis that is made clear in the constituent documents and/or the prospectus. The regulatory system should address the general or exceptional circumstances in which there may be suspension or deferral of: routine valuation and pricing; or regular redemption, of CIS units or shares.

**Key Issues**

*Asset Valuation*

1. Regulation should ensure that all property of a CIS is fairly and accurately valued, and that the NAV of the CIS is correctly calculated. The interests of the investor are generally better protected by the use of value-based reporting wherever reliable market or fair values can be determined. Amortized cost accounting, where permitted, should be subject to appropriate limitation and monitoring.

2. CIS should be valued regularly and on any day that CIS units are purchased or redeemed.

3. CIS operators should be responsible for publishing or disclosing the price of the CIS on a regular basis to enable investors or potential investors to assess the performance of the CIS over time.

4. Valuation methods should be applied consistently unless change is desirable in the interest of investors.

---

222 Value-based reporting is understood as marking financial assets to market or using market prices (values) where these are available and reliable.

223 A mandatory requirement in some jurisdictions. See Best Practice Standards on Anti Market Timing and Associated Issues for CIS, supra, p. 7.
5. The valuation policies and procedures should be periodically reviewed. A third party should review the CIS valuation process at least annually.\textsuperscript{224}

6. Where money market funds (MMF) display a stable NAV, the regulatory system should include measures that are designed to reduce the specific risks associated with their stable NAV feature and reinforce their resilience and their ability to face significant redemptions.

Pricing and Redemption Issues

7. Regulation should require that the basis upon which investors may redeem units or shares is made clear in the constituent documents and/or the prospectus.

8. Incoming, continuing and outgoing investors should be treated equitably, such that purchases and redemptions of CIS interests are affected in a non-discriminatory manner.

9. Suspension of redemptions in the open-ended CIS may be justified only: (i) if permitted by law, regulation or regulators, and in exceptional circumstances provided such suspension is in the best interest of unit-holders or market efficiency; or (ii) if the suspension is required by law, regulation or regulators.\textsuperscript{225}

10. Regulation should ensure that rights of suspension protect the interests of investors rather than the interests of the CIS operator.

11. Regulators and unit-holders should be kept informed of any suspension of redemption rights.

Key Questions

Asset Valuation

1. Are there specific regulatory requirements in respect of the valuation of CIS assets?\textsuperscript{226}

2. Are there regulatory requirements that the NAV of CIS be calculated:
   
   (a) On a regular basis?
   
   (b) Each day that CIS units are purchased or redeemed?
   
   (c) In accordance with high-quality, accepted accounting standards used on a consistent basis?\textsuperscript{227}

3. Are there specific regulatory requirements in respect of the fair valuation of assets where market prices are not available?\textsuperscript{228}

\textsuperscript{226} See also \textit{Principles for the Supervision of Operators of Collective Investment Schemes}, supra, p. 10. In addition, there should be some arrangement for valuing illiquid holdings if any. See also Key Issue 3.
\textsuperscript{227} Id.
\textsuperscript{228} Id.
4. Are there specific regulatory requirements where amortized cost accounting is permitted?

5. Are third parties (e.g., independent auditors) required to check the valuations of CIS assets?

6. Where MMFs display a stable NAV, does the regulatory system include measures that are designed to reduce the specific risks associated with their stable NAV feature and reinforce their resilience and their ability to face significant redemptions?

Pricing and Redemption Issues

7. Does the regulatory system:
   (a) Require the basis upon which investors may redeem units/shares to be made clear in the constituent documents and/or the prospectus?
   (b) Provide for specific regulatory requirements in respect of the pricing upon redemption or subscription of units/shares in a CIS?

8. Does regulation ensure that the valuations made are fair and reliable?

9. Does regulation require the price of the CIS be disclosed or published on a regular basis to investors or prospective investors?

10. Are there regulatory requirements, rules of practice, and/or rules addressing pricing errors? Are the relevant regulatory authorities able to enforce these rules?

11. Does the regulatory system address the general or exceptional circumstances in which there may be suspension, or deferral, of: routine valuation and pricing; or regular redemption, of CIS units or shares?

12. Does the regulator have the power to ensure compliance with the rules applicable to asset valuation, pricing and suspension of the redemption and subscriptions?

13. Does the regulatory system require that the regulator:
   (a) Be kept informed of any suspension or deferral of redemption rights?
   (b) Have the authority to address situations where the CIS operator: is failing to honour redemptions; or is imposing a suspension of redemptions in a manner that is not consistent with the CIS constitutive documents and prospectus, or the contractual relationship between the CIS participants and the CIS operator; or is otherwise deemed to be in violation of national law?

Explanatory Notes

The valuation of the property of a CIS and the calculation of the NAV are extremely important, as the NAV\(^{229}\) reflects the price which an investor pays when investing in a CIS (subject to any additional up-front charges) and the price an investor will receive should a holding be liquidated (subject to any additional exit charges). Assessors should pay proper attention to

---

\(^{229}\) NAV is calculated by dividing the total value of the investments in a CIS by the number of units in issue, plus or minus adjustments for accrued fees, expenses and other liabilities.
the calculation modalities and to the timing, and frequency, of publication of the CIS NAV. Assessors should also evaluate whether the supervision of the CIS confirms that the operator has systems and controls in place to ensure a fair and accurate valuation of the property of a CIS, and that calculations of the NAV are correct at each valuation point, as indicated in Key Issue 2.

The type and frequency of valuation may depend on the availability and timing of redemption rights, the types of interests that may be held within a CIS, and the permitted legal structure of a CIS.

In the jurisdiction, if there are third parties appointed to perform valuation services (such as valuation agents), the responsible entity should conduct initial and periodic due diligence on such third party valuation service providers.

The right to redeem units/shares is a key feature of open-ended CIS. The assessor should evaluate whether the rules in place are sufficient to prevent fees or charges payable by an investor, in the case of redemption, from being conceived so as to prevent investors from exercising their rights. Assessors should take into account that the rights of suspension, available to the CIS operator, may not be exerted in ways that impair the protection of investors’ interests, and that regulators are able to enforce decisions aimed at protecting investors’ interests. In the case of closed-end funds, assessors may consider how regularly such CIS are priced.

With respect to Key Question 6, assessors should consider whether the accuracy of the CIS NAV calculation is required to be checked by auditors, which are subject to adequate levels of oversight and independence in accordance with Principles 19 to 21. However, it is not necessary that independent auditors check each individual valuation of a CIS for a positive answer to Key Question 6.

With respect to Key Question 10, assessors should also consider whether there is any evidence that the requirements on asset valuation and pricing are enforced in the assessed jurisdiction.

**Benchmarks**

*Fully Implemented*

Requires affirmative responses to all applicable Questions.

* Broadly Implemented*

Requires affirmative responses to all applicable Questions except to Question 10.

*Partly Implemented*

Requires affirmative responses to all applicable Questions except to Questions 3, 4, 5, 10 and 12.

*Not Implemented*

Inability to respond affirmatively to one or more of Questions 1, 2(a), 2(b), 2(c), 6, 7(a), 7(b), 8, 9, 11, 13(a) or 13(b).
**Principle 28** Regulation should ensure that hedge funds and/or hedge funds managers/advisers are subject to appropriate oversight.

Although some jurisdictions may regulate hedge funds as CIS, Principle 28 is the only principle in this section applicable in the assessment of hedge funds and/or hedge fund managers/advisers regulation.

In previous work,\(^{230}\) IOSCO has recognized that there is no universal definition of hedge funds and that a variety of approaches to regulation of hedge funds and/or hedge fund managers/advisers are possible. The important point to note is that the regulatory system should set standards for the authorization/registration and the regulation and supervision of those who wish to operate hedge funds (managers/advisers) (and/or, where relevant,\(^{231}\) for the registration of the hedge fund).

The relevant regulatory requirements should allow the regulator at the funds level to get an overall picture of the risks posed by the hedge funds.\(^{232}\) The information supplied through the registration/authorization process could also be made available to all prospective investors prior to the execution of a subscription agreement or other investment management agreement.\(^{233}\)

Hedge fund managers/advisers which are required to register should be subject to appropriate entry and ongoing regulatory requirements\(^ {234}\) and should be supervised/monitored on an ongoing basis. In previous work,\(^ {235}\) IOSCO has recommended that regulatory oversight should be more focused on systemically important and/or higher risk hedge fund managers/advisers. For example, a *de-minimis* cut-off is one of the possible approaches. A possible cut-off could be determined taking into account certain characteristics such as leverage, economic exposure etc. Another possibility, which takes into account the principle of proportionality, is to require the registration of all hedge fund managers/advisers but consider a lower level of ongoing supervision for managers below a certain *de-minimis* cut-off.\(^ {236}\) In assessing the implementation of Principle 28, assessors should determine whether the jurisdiction regulates and supervises hedge fund managers/advisers according to the risks they pose.

---

\(^{230}\) See *Hedge Funds Oversight*, supra, p. 4.

\(^{231}\) Some securities regulators may have regulatory requirements at the level of the funds themselves to facilitate obtaining fund specific information and to get an overall picture of the risks posed by the funds. Such direct regulation at the fund level could involve a registration/authorization of the fund as well as ongoing supervision of the fund. Whether this additional layer of regulation is required to address systemic and market integrity risks will reflect local conditions and industry structure. Nothing in this Methodology should be interpreted to require the registration of the fund.

\(^{232}\) See *Hedge Funds Oversight*, supra, pp. 13–14.

\(^{233}\) Id., p. 12.

\(^{234}\) If the hedge fund is organized as an investment company, which does not appoint an external manager, the requirements referring to the “hedge fund manager” should be complied with by the investment company itself and by its managers.

\(^{235}\) See *Hedge Funds Oversight*, supra, pp. 15–16.

\(^{236}\) Id. As noted above, there is no consistent or agreed-upon definition of the term “hedge fund”. The determination of what investment vehicles will be characterized as “hedge funds” is committed to the regulator.
Key Issues

1. Regulatory oversight of hedge fund managers/advisers should reflect the risks posed by hedge funds and be risk-based and proportional (i.e., to the size and complexity of the hedge fund managed) and, therefore, should be more focused on systematically important and/or higher risk hedge fund managers/advisers.

2. Hedge funds and/or hedge fund managers/advisers that are required to register should be subject to relevant entry standards. The information supplied through the registration/authorization process should provide adequate transparency into the business of the hedge fund manager/adviser and/or on the hedge funds managed.

3. Hedge fund managers/advisers which are required to register should be subject to appropriate ongoing regulatory requirements relating to:
   (a) organizational and operational standards:
   (b) conflicts of interest and other conduct of business rules;
   (c) disclosure to investors; and
   (d) prudential requirements.237

4. Securities regulators should be able to obtain – if necessary through working with other regulators – non-public reporting of information on the prime brokers’ and banks’ most systemically significant and/or higher risk hedge fund counterparties.238

5. Hedge fund managers/advisers should provide to the regulator information for systemic risk purposes (including the identification, analysis, and mitigation of systemic risks).

---

238 The objective of information gathering by securities regulators from hedge fund managers is to obtain information on the hedge fund’s prime brokers and custodians and the hedge fund’s risk exposures that could be made available for systemic risk purposes (including the identification, analysis and mitigation of systemic risk): see Hedge Funds Oversight, supra. The Hedge Funds Oversight report also makes recommendations with respect to information gathering from prime brokers and banks by their relevant prudential regulators: “The main objectives of this information gathering [by prudential regulators] through prime brokers/banks are to gauge risk appetite (funds and banks), identify the emergence of large and highly leveraged funds, to assess banks’ ability to aggregate counterparty exposure across business lines, and to build a prime brokerage ‘soft network’”. The relevant concern is that: “Prime brokers and banks which provide funding and other services to hedge funds can be the main transmission mechanism through which the significant distress or failure of a single fund or cluster of hedge funds may result in systemic effects, and potentially impact on the real economy. This may result through a curtailing of the provision of credit or disruptions to payment and clearing services, which could then impact directly on the real economy”.The objective of information gathering by securities regulators from hedge fund managers is to obtain information on the hedge fund’s prime brokers and custodians and the hedge fund’s risk exposures that could be made available for systemic risk purposes (including the identification, analysis and mitigation of systemic risk): see Hedge Funds Oversight, supra. The Hedge Funds Oversight report also makes recommendations with respect to information gathering from prime brokers and banks by their relevant prudential regulators: “The main objectives of this information gathering [by prudential regulators] through prime brokers/banks are to gauge risk appetite (funds and banks), identify the emergence of large and highly leveraged funds, to assess banks’ ability to aggregate counterparty exposure across business lines, and to build a prime brokerage ‘soft network’”. The relevant concern is that: “Prime brokers and banks which provide funding and other services to hedge funds can be the main transmission mechanism through which the significant distress or failure of a single fund or cluster of hedge funds may result in systemic effects, and potentially impact on the real economy. This may result through a curtailing of the provision of credit or disruptions to payment and clearing services, which could then impact directly on the real economy”.
PRINCIPLES RELATING TO COLLECTIVE INVESTMENT SCHEMES AND HEDGE FUNDS

6. Regulators should have the authority to cooperate and share information, where appropriate, with each other, in order: to facilitate efficient and effective oversight of globally active hedge fund managers/advisers, and/or hedge funds; and to help identify systemic risks, market integrity and other risks arising from the activities or exposures of hedge funds, with a view to mitigating such risks across borders.

Key Questions

Registration/Authorization of Hedge Fund Managers/Advisers and/or, where relevant, the Hedge Fund

1. Does the regulatory system set standards for:
   (a) The registration/authorization and the regulation of those who wish to operate hedge funds (managers/advisers)?
   (b) And/or the registration of the hedge fund?\(^{239}\)

2. Does the regulatory system specify the information contemplated by Key Issue 2 that must be provided to the regulator at the time of the registration/authorization?\(^{240}\)

Standards for Internal Organization and Operational Conduct

3. Does the regulatory system set (in view of the risk posed) standards for internal organization and operational conduct to be observed, on an ongoing basis, by the hedge fund manager/adviser, including appropriate risk management and protection, and segregation of client money and assets?\(^{241}\)

Conflicts of Interest and Other Conduct of Business Rules

4. Does the regulatory system set standards for hedge fund managers/advisers to appropriately manage conflicts of interest,\(^{242}\) and provide full disclosure and transparency to the regulator and investors (including potential investors) about such conflicts and how they manage them?

---

\(^{239}\) Id. See also Explanatory Notes on exempted/lower regulated hedge funds and/or hedge fund managers/advisers.

\(^{240}\) Id. See also Explanatory Notes.

\(^{241}\) Id, p. 11. In assessing the application of Key Question 3, the assessors should consider at least the issues mentioned in the Explanatory Notes.

\(^{242}\) Hedge fund managers, like other fund managers, are subject to significant conflicts of interest (institutional and personal). The first category includes conflicts that affect the hedge fund manager as an institution, such as investment/trade/brokerage allocation practices; undisclosed compensation arrangements with affiliates; undisclosed compensation arrangements with counterparties, etc. The second category includes individual conflicts, such as personal trading; personal investing; personal or business relationships with issuers, etc.: see *Hedge Funds Oversight*, supra, p. 11. As regards compensation/remuneration structures and practices, they should be subject to strong governance mechanisms and required to manage conflicts of interest issues and to counter the short-term profit motives that are often inherent in hedge funds’ operations: see *Hedge Funds Oversight*, supra, p. 12. See also Principle 8.
Disclosure to the Regulator and to Investors

5. Is the regulator able to obtain from hedge fund managers/advisers appropriate information about their operations and about the hedge funds that they manage that allow it to assess the risks that hedge funds pose to systemic stability?243

6. Does the regulatory system, in view of the risks posed, set standards for the proper disclosure by hedge fund managers/advisers, or by the hedge fund, to investors?244

Prudential Regulation

7. Are hedge fund managers/advisers, which are required to register, subject to appropriate ongoing prudential requirements that reflect the risks they pose?

Supervision and Enforcement

8.

(a) Does the regulatory system provide for ongoing supervision of the hedge fund managers/advisers which are required to register?

(b) Does the regulator have the power to access and inspect the hedge fund managers/advisers and their records and/or the hedge funds?

(c) Does the regulator have the authority to enforce against wrongdoers?

9. Subject to appropriate confidentiality safeguards and national law restrictions, from the point of view of supervision and enforcement, does the regulator have the power to:

(a) Collect where necessary relevant information from hedge fund managers/advisers and/or hedge funds (and through cooperation with other domestic regulators from hedge fund counterparties) also on behalf of a foreign regulator?

(b) Exchange information on a timely and ongoing basis, as deemed appropriate, with other relevant regulators on internationally active hedge funds that may pose systemic or other significant risks?

10. Is the securities’ regulator able to obtain from the hedge fund operator/adviser — if necessary working with other regulators — non-public reporting of information on the hedge funds’ exposure to counterparties, (which may include prime brokers, banks or OTC derivative counterparties)?

---

243 This information gathering would help regulators to identify current or potential sources of systemic risk that hedge funds may pose, either individually or collectively and consequently help regulators in better understanding: the leverage used in different strategies and the size of funds’ “footprints”; the scale of any asset/liability mismatch; substantial market or product concentration and liquidity issues; and hedge fund counterparty risks: see Hedge Funds Oversight, supra, p. 14. See also Explanatory Notes.

244 See Hedge Funds Oversight, supra, p. 12. The timing of such disclosure is determined by the regulator. See also Explanatory Notes.
Explanatory Notes

In assessing implementation of this Principle, assessors should consider the regulatory framework in the context of the risks that hedge funds (individually and collectively) pose to investor protection, fair and efficient markets, and the reduction of systemic risk, and how the regulatory framework addresses these risks. This will require assessors to consider the risks that hedge funds pose in the relevant jurisdiction and the risks they may pose to global and regional markets.

Assessors should also recognize that industry standards and Codes of Conduct may be used in implementing this Principle, provided, however, that whatever method of implementation is chosen is enforceable to the extent necessary to achieve its objectives and takes into account the Benchmarks. For instance, disclosure and conduct standards may be developed by industry, with regulation requiring those standards to be applied. In these cases, assessors may also consider how compliance with those standards is enforced.

With respect to Key Question 1, assessors should also consider whether the regulator has the power to refuse registration/authorization if the entry standards are not met.

With respect to Key Question 2, there may be differences in how the jurisdictions handle this Question. The type of information that could be considered as possible requirements, at registration/authorization of the manager/ adviser, includes:

- background of key management and investment personnel, organization and ownership;
- business plan;
- services offered;
- hedge fund investors targeted;
- fees charged;
- policy on related parties investments;
- investment strategies utilized;
- risk tools or parameters employed;
- identification of key service providers, such as independent auditors, sub-advisers, administrators, custodians, prime brokers and credit providers;
- delegation and outsourcing arrangements; and
- conflicts of interest and procedures to identify and address them.245

With respect to Key Question 3, there may be differences in how the jurisdictions handle this Question. Jurisdictions will determine what, and under what circumstances, standards for internal organization and operational conduct will be imposed on the hedge fund managers/advisers.

---

245 See Hedge Funds Oversight, supra, pp. 11–12.
Assessors should consider whether the standards for internal organization and operational conduct to be observed on an ongoing basis by the hedge fund manager/advisers (in view of the risks posed) take into account at least the following:

(a) A comprehensive risk management framework supported by an independent risk management function, appropriate to the size, complexity and risk profile of the hedge fund manager/adviser.

(b) An independent compliance function, appropriate to the size, complexity and risk profile of the hedge fund manager/adviser, supported by: sound and controlled operations and infrastructure; adequate resources; and operations for checks and balances.

(c) Adequate segregation of responsibilities for valuing and investing hedge fund assets, and thorough written valuation policies.

(d) Adequate segregation and protection of client monies and assets through use of custodians and depositaries that are, in appropriate circumstances, independent, and ensure investors’ funds are protected.

(e) Appropriate records of the trades performed on behalf of each hedge fund.

(f) Independent audit, on an annual basis, of the financial statements of the fund manager/adviser and/or each of the hedge funds managed.

With respect to Key Question 5, regulators should be able to obtain from hedge fund managers/advisers information about the hedge funds in their portfolio, which could include, for example, the information listed in the Explanatory Notes relating to Key Question 2 above.

In addition, regulators should be able to obtain from hedge fund managers/advisers appropriate information on an ongoing basis, for example:

- information on their prime brokers, custodian, and background information on the persons managing the assets;
- information on the manager’s/adviser’s larger hedge funds including, the NAV, predominant strategy/regional focus and performance;
- leverage and risk, including concentration risk of the manager’s/adviser’s larger hedge funds;
- asset and liability information for the manager’s/adviser’s larger hedge funds;
- counterparty risk, including the biggest sources of credit;
- product exposure for all of the hedge fund manager/adviser assets (e.g., equities, structured/securitized credit, investment grade corporate bonds etc.); and
- identification of investment activity known to represent a significant proportion (in terms of liquidity/volume) of such activity in important markets or products.

---

246 Id, pp. 10–11.
247 Id. See also Principles for the Valuation of Hedge Fund Portfolios, supra, pp. 11, 13–14.
248 Records should be maintained by the hedge fund managers (and where appropriate hedge funds themselves), like other market participants. Such information should be available to the regulators upon request e.g., for market abuse inspections. See Hedge Funds Oversight, supra, p. 12.
Hedge fund managers/advisers must be able to obtain all the necessary information from the hedge funds they manage—irrespective of the location of those hedge funds—so that hedge fund managers/advisers are able to effectively evaluate the risks they are taking in their portfolio.

*With respect to Key Question 6,* hedge fund managers/advisers, or the hedge fund, should provide proper disclosure to investors, amongst other things on:

(a) the risks posed;
(b) the conditions and/or the limits for redemption;
(c) the existence and conditions of any side letters and gating structures;
(d) the hedge fund’s strategy and performance, including audited financial statements of the hedge fund manager/adviser and/or the hedge funds managed. The timing of such disclosure is determined by the regulator.

*With respect to Key Question 7,* there may be differences in how jurisdictions handle this Question, since not all securities regulators are also prudential regulators.

Each jurisdiction will determine what, and under what circumstances, prudential requirements will be imposed on hedge fund managers/advisers.

For a positive assessment of Key Question 7, assessors should consider whether the regulatory system as a whole ensures that hedge fund managers/advisers, which are required to register, are subject to prudential requirements that reflect the risks they take (and which are most likely to be akin to other asset manager requirements), e.g., operational risk, client money, etc.

Jurisdictions also have different approaches to prudential regulation. Some jurisdictions see prudential regulation as being primarily about capital requirements. Others see it more broadly as also including risk management frameworks. Standards for internal organization and operational conduct will also be relevant to this question. Differences in approach reflect different institutional and market conditions. Differences in approach reflect different institutional and market conditions. Differences in approach reflect different institutional and market conditions. Differences in approach reflect different institutional and market conditions. Differences in approach reflect different institutional and market conditions. Differences in approach reflect different institutional and market conditions. Differences in approach reflect different institutional and market conditions. Differences in approach reflect different institutional and market conditions. Nothing in the Principles or this Methodology should be interpreted to imply a negative assessment of Key Question 7 when the jurisdiction imposes prudential requirements for the managers or advisers of hedge funds other than capital requirements.

Assessors should take differences in approach to prudential regulation into account in assessing whether appropriate prudential requirements are in place.

*With respect to Key Questions 8(a), 8(b) and 8(c),* the regulator should have comprehensive inspection, investigation, surveillance and enforcement powers in relation to hedge funds and/or hedge fund managers/advisers. The regulatory system should ensure an effective and credible use of these powers and the implementation of an effective compliance program, as explained in Principles 10 to 12.

In case of failure to comply with the ongoing regulatory requirements, the regulator should have the authority to impose measures (including withdrawing, suspending, or applying conditions to a registration/authorization) and to impose effective, proportionate and dissuasive sanctions.

*With respect to Key Questions 9(a) and 9(b),* the regulator should be able to cooperate and share information with other foreign authorities for the purposes of supervision and enforcement in the same way as explained under Principles 13 to 15 on cooperation.
Assessors should take into account any obstacles the regulator may face when asked to cooperate with foreign securities regulators, including whether the regulator is able to exercise the powers listed in Key Questions 9(a) and 9(b) with respect to exempted or lower regulated entities.

*With respect to Key Question 10*, the ability of a regulator to obtain non-public reporting of information on the prime brokers’ and banks’ most systemically significant and/or higher risk hedge fund counterparties is enhanced if the latter are supervised entities. In previous work,249 IOSCO has recommended that “Prime brokers and banks which provide funding to hedge funds should be subject to mandatory registration/regulation and supervision. They should have in place appropriate risk management systems and controls to monitor their counterparty credit risk exposures to hedge funds”.

**Exempted/Lower regulated Hedge Funds and/or Hedge Fund Managers/Advisers**

The assessors should take into account whether the regulator has discretion to grant exemptions from the registration/authorization of those that wish to operate hedge funds and/or – where relevant – of hedge funds, or the regulatory system provides for lighter entry requirements compared to other assets pools or other assets pools’ operators (e.g., notification requirements or cut-off). In such a case, assessors should consider if the reason why the exemption is conferred and the process by which it is conferred are: transparent; give similar results for similarly situated persons or sets of circumstances; and explainable in the context of this Principle 28. Assessors should consider the entry requirements, if any, applicable to exempted/lower regulated hedge fund managers/advisers, including: the type of information that the regulator is able to collect and any ongoing regulatory requirements applicable to them relating to organizational and operational standards; conflicts of interest and other conduct of business rules; disclosure toward the regulator and investors; and prudential regulation.

Where appropriate, the assessor should make reference to the assessment of Principle 7.

Assessments of Principle 28 should be consistent with any findings under the assessment of Principle 6 on systemic risk.

To determine whether Principle 28 is implemented in a manner that achieves its objectives, it is also necessary to consider whether the regulatory framework provides for mechanisms to address current and potential systemic risks arising from the operation of hedge funds.

In particular, assessors should assess whether the securities regulator is able, either directly or through working with other regulators, to obtain non-public reporting of information on the prime brokers’ and banks’ most systemically significant and/or higher risk hedge fund counterparties.250

H. PRINCIPLES RELATING TO MARKET INTERMEDIARIES

1. Preamble

The Principles relating to Market Intermediaries seek to support the IOSCO objectives by setting requirements related to entry criteria, capital and prudential requirements, conduct of business, ongoing supervision, and discipline of market intermediaries, and the consequences of default and financial failure.

Market intermediaries should conduct themselves in a way that protects the interests of their clients and helps to preserve the integrity of the market. Fundamental principles include:

- A firm should observe high standards of integrity and fair dealing.
- A firm should act with due care and diligence in the best interests of its clients and the integrity of the market.
- A firm should observe high standards of market conduct.
- A firm should not place its interests above those of its clients and should give similarly situated treatment to similarly situated clients.
- A firm should comply with any law, code or standard relevant to securities regulation as it applies to the firm.

Supervision and Enforcement

In addition, regulation of the various types of market intermediaries should aim to provide for:

- Proper ongoing supervision with respect to market intermediaries.
- The right to inspect the books, records and business operations of a market intermediary.\(^{251}\)
- A full range of investigatory powers and enforcement remedies available to the regulator or other competent authority in cases of suspected or actual breaches of regulatory requirements.
- A fair and expeditious process leading to discipline and, if necessary, suspension or withdrawal\(^{252}\) of a licence.
- The existence of an efficient and effective mechanism to address investor complaints.

Principles 29 to 32 deal with market intermediaries. Principle 29 addresses authorization and the standards for authorization; Principle 30 addresses ongoing monitoring and the initial and ongoing capital requirements and prudential standards for intermediaries; Principle 31 addresses other operational standards for market intermediaries and standards for conduct of business to protect the interests of clients and their assets and for ensuring proper management of risks; and Principle 32 addresses procedures for minimizing the consequences to investors and markets of the failure of a market intermediary. These Principles should be assessed in conjunction with each other.

---

\(^{251}\) Inspection powers should be available to a regulator to ensure compliance with all relevant requirements, even in the absence of a suspected breach of conduct. There must be complementary requirements for the maintenance of comprehensive records. See also Principle 10.

\(^{252}\) The term “withdrawal” would include revocation.
The oversight of market intermediaries should primarily be directed to the areas where their capital, client assets and public confidence may most be put at risk. These include the risks of:

- Incompetence, poor risk management or risk management that fails to be adequate in the context of an extraordinary event. Any of these may lead to a failure: (1) to provide best execution; (2) to obtain prompt settlement; and/or (3) to provide appropriate advice.

- Breach of duty, laws and regulations (which may lead to misappropriation of client funds or property, the misuse of client instructions for the intermediary’s own trading purposes, i.e., “front running” or trading ahead of clients).

- Manipulation, insider trading and other trading irregularities; or fraud, money laundering, or terrorist financing taking place at the intermediary.

- Conflicts of interest.

- Insolvency of an intermediary (which may result in loss of client money, securities or trading opportunities and may reduce confidence in the market in which the intermediary participates).

In assessing the adequacy of regulation, assessors should consider both the activities regulators perform directly, as well as those activities performed by SROs (including an assessment of the adequacy of the supervision of such self-regulatory activities by the regulator).

2. **Scope**

The Principles under this Section apply to market intermediaries. Some or all of the Principles may also apply to investment advisers, depending on the nature of the investment adviser’s business, as explained below.

“Market intermediaries” generally include those who are in the business of managing individual portfolios, executing orders and dealing in, or distributing, securities. A jurisdiction may also choose to regulate as a market intermediary an entity that engages in any one or more of the following activities:253

- Receiving and transmitting orders.

- Proprietary trading/dealing on own account.

- Providing advice regarding the value of securities or the advisability of investing in, purchasing, or selling securities.

- Securities underwriting.

- Placing of financial instruments without a firm commitment basis.

---

253 A market intermediary may also be authorized, in addition to the activities mentioned in the paragraph above, to hold custody of client assets (e.g., safekeeping and administration of securities) as an ancillary activity. Custody in this context means “physically” holding the client assets (i.e., in electronic or in paper form) where they could be at risk of custodial error or misappropriation. However, merely being able to deduct an advisory fee from customer assets held not at the adviser but rather at a bank or broker-dealer would not be considered having “custody.”
“Investment advisers” are those principally engaged in the business of advising others regarding the value of securities or the advisability of investing in, purchasing or selling securities. This does not mean that they cannot provide other services. In some jurisdictions, an investment adviser that deals on behalf of clients and/or is permitted to hold client assets would be classified as a market intermediary. In other jurisdictions, investment advisers are treated separately from market intermediaries. When this distinction exists, the scope of Principles 29 to 32 may apply differently depending on the type of investment adviser. Regulation should depend on, and be appropriate to, the adviser’s activities. This is clarified in more detail under the heading of “investment advisers” in Principle 29.

To the extent that this section calls for an assessment of the ongoing operations of intermediaries consistent with the Principles, the assessor should be certain that any conclusions reached are consistent with those contained in Principles 10, 11 and 12 related to enforcement and inspection powers and implementation of such powers.

In many ways, the definition of traditional securities market intermediaries is applicable in the OTC derivatives context. However, there are a number of differences between traditional market intermediaries and derivatives market intermediaries (DMIs), as noted in IOSCO’s International Standards for Derivative Market Intermediary Regulation (“DMI Report”).

DMIs should generally include those who are in the business of dealing, making a market or intermediating transactions in OTC derivatives. However, DMIs should not include end-users and market participants who enter into OTC derivatives transactions but are not engaged in the business of dealing, making a market or intermediating transactions. Further, while in some IOSCO jurisdictions certain derivatives may be classified as “securities”, the term “traditional securities market” is used to refer to conventional securities, such as bonds and exchange-traded equities and options, in contrast to instruments that would be considered OTC derivatives (which does not include products listed on an exchange).

The DMI Report focuses on the regulation of DMIs, taking into account the distinctions between the OTC derivatives market and the traditional securities markets, including the fact that the OTC derivatives market is primarily a principals market and the securities market is primarily intermediated. Where there are differences between traditional securities markets and OTC derivatives markets, the DMI Report identified and explained these differences in order to tailor objectives and standards specifically to market intermediaries operating in the OTC derivatives market. Accordingly, the Principles for Market Intermediaries and related Methodology should be applied to DMIs only as specifically noted in Key Issue 11 and Key Question 8 of Principle 29 and Key Issue 4 and 8 and Key Question 6 and 12 of Principle 31.

---

254 In this respect, three types of investment adviser could be identified:
(a) Investment advisers that deal on behalf of clients.
(b) Investment advisers that do not deal on behalf of clients, but are permitted to have custody of client assets.
(c) Investment advisers who neither deal on behalf of clients nor hold or have custody of client assets nor manage portfolios, but who offer only advisory services without offering other investment services.

256 Id, pp. 4 and 10.
3. **Principles 29 through 32**

<table>
<thead>
<tr>
<th>Principle 29</th>
<th>Regulation should provide for minimum entry standards for market intermediaries.</th>
</tr>
</thead>
</table>

The licensing\(^{257}\) and supervision of market intermediaries, including its staff, should set minimum standards for them and provide consistency of treatment for all similarly situated market intermediaries. It should also reduce the risk to investors of loss caused by negligent or illegal behaviour and/or inadequate capital.

**Key Issues**

*Authorization*

1. The authorization, licensing or registration should specify the services or activities which the market intermediary is authorized to provide.

2. The authorization, licensing or registration of market intermediaries should set minimum standards of entry that make clear the basis for authorization and the standards that should be met on an ongoing basis. Such standards should include:

   (a) An initial minimum capital requirement as set forth in Principle 30.

   (b) A comprehensive assessment of the applicant and all those who are in a position directly, or indirectly, to control, or materially influence, the applicant. In this regard, regulation should determine the conditions or criteria to be met by the market intermediary and its staff in order to be allowed to participate in the market. This should include, but not be restricted to, a demonstration of appropriate knowledge, business conduct, resources, skills, ethical attitude (including a consideration of past conduct), and internal organization.\(^{258}\)

   (c) A requirement that the entry standards be consistently applied.

*Authority of Regulator*

3. The licensing authority should have the power to:

   (a) Refuse licensing of a market intermediary, subject only to administrative or judicial review, if authorization requirements have not been met.

   (b) Withdraw, suspend or apply a condition to a licence or authorization where a change in control or other change results in a failure to meet relevant requirements, according to Principle 3.

---

\(^{257}\) The terms “licensing”, “authorization” and “registration” are used interchangeably in this section. In some jurisdictions authorization or registration is used instead of licensing. The term “licence” in this section should be understood to refer also to authorization and registration.

\(^{258}\) Examples from jurisdictions include: statutory disqualification programs and detailed criteria relating to education, training, experience or the so-called “fitness and propriety” of an applicant to be met before a person may be licensed. These criteria are intended to protect the investor. See generally *Fit and Proper Assessment — Best Practice*, Final Report, Report of the Emerging Markets Committee of IOSCO, December 2009, available at [http://www.iosco.org/library/pubdocs/pdf/IOSCOPD312.pdf](http://www.iosco.org/library/pubdocs/pdf/IOSCOPD312.pdf).
4. The regulator, or the SRO subject to the regulator’s oversight, should demonstrate an ability to carry out an effective review of applications for licensing or authorization to ensure compliance with regulatory requirements.

**Ongoing Requirements**

5. Periodic updating of relevant information and reporting of material changes in circumstances affecting the conditions of licensing should be required, in order to ensure that continued licensing remains appropriate. For example, changes in control, or material influence, should be required to be made known to the regulator, such that it may seek to ensure that its assessment of the market intermediary remains valid.

6. To enable investors to better protect their own interests, the regulator should seek to ensure that the public has access to relevant information concerning the licensee or authorized market intermediary such as: the identity of senior management, and those authorized to act in the name of the market intermediary; the category of licence held and its current status; and the scope of authorized activities.  

**Investment Advisers**

7. In jurisdictions where investment advisers are treated separately from market intermediaries, as explained in the scope section above, investment advisers that deal on behalf of clients or that are permitted to have custody of client assets should be licensed. There are investment advisers who neither:

   (a) deal on behalf of clients nor hold, or have custody of, client assets; nor

   (b) manage portfolios,

but who only offer advisory services without other investment services. In this case, separate licensing of the investment adviser may not be strictly required.

8. In regulating the activities of investment advisers, the regulator may elect to place emphasis on the substantive licensing criteria and the capital and other requirements recommended for regulation of other market intermediaries, as explained under Principles 29 to 32. Alternatively, the regulator may use a disclosure-based regime designed to permit potential advisory clients to make an informed choice of advisers subject to the activities performed by the investment adviser.

9. Regardless of these two options, the regulatory scheme should include the following requirements based on the type of adviser:

   (a) If an investment adviser deals on behalf of clients, the capital and other operational controls (explained in Principles 29 to 32) applicable to other market intermediaries also should apply to the adviser.

---

259 The information must be freely available and readily accessible. It may be maintained in a central repository by the regulator or by an SRO.

260 Where an investment adviser is offering advice through market intermediaries that are adequately licensed according to the Principles, separate licensing of the investment adviser may not be required.

261 Investment adviser type (a) in footnote 254.
(b) If the investment adviser does not deal, but is permitted to have custody of client assets, \(^262\) regulation should provide for the protection of client assets, including segregation and periodic or risk-based inspections (either by the regulator or an independent third party), and capital and organizational requirements as explained under Principles 29 to 32.

10. At a minimum, however, the regulatory scheme selected for investment advisers should contain the following elements of the markets intermediaries regime, as applicable:

(a) A licensing regime that is sufficient to establish authorization to act as an investment adviser and to ensure access by the public to an up-to-date list of authorized investment advisers.

(b) Bars against the licensing of persons who have violated securities or similar financial laws or criminal statutes during a specific time period preceding their application.

(c) Recordkeeping requirements.

(d) Clear and detailed disclosure requirements to be made by the investment adviser to potential clients. \(^263\)

(e) Rules and procedures designed to prevent guarantees of future investment performance and misuse of client assets, and to address potential conflicts of interest. \(^264\)

Derivatives Market Intermediaries

11. In jurisdictions where DMIs are treated separately from market intermediaries, as explained in the Scope Section, DMIs should be subject to registration or licensing, recognizing that in certain limited circumstances full application of requirements and standards may not be appropriate for certain types of entities. \(^265\)

Key Questions

Authorization

1. Does the jurisdiction require that, as a condition of operating a securities business, the market intermediaries (as defined above) are licensed?

\(^{262}\) Investment adviser type (b) in footnote 254.

\(^{263}\) For example, descriptions of the adviser’s educational qualifications, relevant industry experience, disciplinary history (if any), investment strategies, fee structure and other client charges, potential conflicts of interest and past investment performance (if relevant) that is updated periodically and as material changes occur.

\(^{264}\) It may not be possible to resolve all potential conflicts but conflicts should be addressed and if not resolved, at least disclosed.

\(^{265}\) However, because the majority of the OTC derivatives markets are composed of non-retail clients/counterparties, a general exemption for DMIs who only transact with non-retail entities would not be appropriate.
2. Are there minimum standards or criteria that all applicants for licensing must meet before a licence is granted (or denied)\(^\text{266}\) that are clear and publicly available, which:
   
   (a) Are fair and equitable for similarly situated market intermediaries?
   
   (b) Are consistently applied?
   
   (c) Include an initial capital requirement, as applicable?
   
   (d) Include a comprehensive assessment of the applicant and all those in a position to control, or materially influence, the applicant, which requires a demonstration of appropriate knowledge, business conduct, resources, skills, ethical attitude (including a consideration of past conduct)?
   
   (e) Include an assessment of the sufficiency of internal organization and risk management and supervisory systems in place, including relevant written policies and procedures, which enable ongoing monitoring as to whether the minimum standards are still met?

3. Does the regulator, or the SRO subject to the regulator’s oversight, have in place processes and resources to effectively carry out a review of applications for licence?

**Authority of Regulator**

4. Does the relevant authority have the power to:
   
   (a) Refuse licensing, subject only to administrative or judicial review, if authorization requirements have not been met?
   
   (b) Withdraw, suspend or apply a condition to a licence where a change in control or other change results in a failure to meet relevant requirements on an ongoing basis?
   
   (c) Take effective steps to prevent the employment of persons (or seek the removal of persons) who have committed securities violations or who are otherwise unsuitable, so that they cannot continue to engage in intermediary activities, even if these persons are not separately licensed market intermediaries, if they can have a material influence on the firm?

**Ongoing Requirements**

5. Are market intermediaries required: to update periodically relevant information with respect to their licence; and to report immediately to the regulator (or licensing authority) material changes in the circumstances affecting the conditions of the licence?\(^\text{267}\)

6. Is the following relevant information about licensed market intermediaries available to the public:
   
   (a) The existence of a licence, its category and status?

---

\(^{266}\) In some jurisdictions, the criteria are stated for denying or disqualifying potential applicants.

\(^{267}\) There should be regular information provided to the regulator that indicates the market intermediary’s ongoing activities. In addition, where there is a change in the market intermediary’s staff, activities or environment that would have a material effect on its ability to perform its role, this should be reported to the regulator in a timely fashion.
(b) The scope of permitted activities and the identity of senior management and names of other authorized individuals who act in the name of the market intermediary?

Investment Advisers

7. Does the regulatory scheme for investment advisers require that, as applicable:

(a) If an investment adviser deals on behalf of clients, the capital and other operational controls (explained in Principles 29 to 32) applicable to other market intermediaries also should apply to the investment adviser?

(b) If the investment adviser does not deal but is permitted to have custody of client assets, regulation provides for the protection of client assets, including segregation and periodic or risk-based inspections (either by the regulator or an independent third party) and capital and organizational requirements as explained under Principles 29 to 32?

(c) In the case of both (a) and (b), as well as investment advisers who manage client portfolios without dealing on behalf of clients or holding client assets, does regulation impose relevant requirements that cover recordkeeping, disclosure and conflicts of interest as explained in Principle 31?

Derivatives Market Intermediaries

8. In jurisdictions where DMIs are treated separately from market intermediaries, as explained in the Scope Section, does the regulatory system require that DMIs be subject to registration or licensing, recognizing that in certain limited circumstances full application of requirements and standards may not be appropriate for certain types of entities?

Explanatory Notes

Some jurisdictions may licence persons who operate a CIS as CIS operators; other jurisdictions may licence CIS operators as investment advisers. This characterization should be without prejudice to their assessment under Principles 24 through 28, on CIS, according to the assessment criteria for those Principles and, in any case, these Principles should still apply to the market intermediaries’ activities of that investment adviser.

Recognition of another licensing regime, in connection with access to domestic clients by a foreign intermediary subject to relevant conditions, is contemplated as being a licensing or authorization program under the assessment benchmarks, provided that the criteria used are transparent, clear, consistently applied and address the objectives of the Principles.

Where individuals or entities are licensed, registered or authorized in more than one capacity, assessors must assure what criteria are applied to each category.

Where a jurisdiction has an SRO that licences market intermediaries, assessment of the appropriate oversight of the process by the regulator is addressed under Principle 9.

When considering Key Question 3, assessors should give consideration to Principle 3 on resources.

When considering Key Question 2(e), assessors should give consideration to the extent to which assessment of these systems by the regulator, or its designee (such as an SRO), is possible prior to the granting of a licence.
PRINCIPLES RELATING TO MARKET INTERMEDIARIES

Benchmarks

Fully Implemented

Requires affirmative responses to all applicable Questions.

Broadly Implemented

Requires affirmative responses to all applicable Questions except to Question 6(b).

Partly Implemented

Requires affirmative responses to all applicable Questions except to Questions 2(e), 4(c), 6(b).

Not Implemented

Inability to respond affirmatively to one or more of Questions 1, 2(a), 2(b), 2(c), 2(d), 3, 4(a) and (b), 5, 6(a), 7(a), 7(b) and 7(c) and 8 to the extent applicable.

268 In the case of investment advisers, affirmative answers are only required to those Questions applicable to the category of adviser(s) permitted in the jurisdiction. This does not refer to principal protected or guaranteed specified minimum rate of return plans for which appropriate disclosures are made.
Principle 30  There should be initial and ongoing capital and other prudential requirements for market intermediaries that reflect the risks that the intermediaries undertake.

Capital adequacy standards foster confidence in the financial markets and investor protection. Establishment of adequate initial and ongoing capital standards also contributes to ensuring the protection of investors, and the integrity and stability of financial systems. A market intermediary should be required to ensure that it maintains adequate financial resources to meet its business commitments and to withstand the risks to which its business is subject.

Assessors should assess each country’s capital adequacy standards by reference to the capital adequacy principles published by IOSCO.269

Key Issues

1. There should be an initial capital requirement for market intermediaries as a condition of authorization. This requirement should be based on a capital adequacy test that addresses the risks to such firms judged by reference to the nature and amount of the business expected to be undertaken.

2. There should be an ongoing capital requirement directly related to the nature of the risks and the amount of business actually undertaken by a market intermediary. The capital required should be maintained by the market intermediary and subject to timely periodic reporting to the regulator, or authorized SRO that is subject to regulatory oversight. This should involve a combination of regular reporting, and one-off trigger-based early warning reporting when the threshold levels for minimum capital are approached.

3. Market intermediaries should be subject to capital adequacy and liquidity standards which should cover solvency. Lack of liquidity can cause difficulties for a firm because it might not be able to meet its liabilities as they fall due.270

4. Capital adequacy standards271 should be designed to allow a market intermediary to absorb some losses and continue to operate, particularly in the event of large, adverse market moves, and to achieve an environment in which it could wind down its business over a relatively short period without loss to: its clients; its counterparties; or the clients of other firms, and without disrupting the orderly functioning of the financial markets. Capital standards should be designed to provide supervisory authorities with time to intervene to accomplish the objective of orderly wind down.

270  Id, p. 17.

271  Id, Part IV at pp. 10–21.
5. In addition to the organizational requirements under Principle 31, a market intermediary should be subject to:
   (a) Independent audits of its financial condition.
   (b) Inspections, including periodic and for cause examinations, by a regulator, or an authorized SRO that is subject to regulatory oversight.

6. The regulator should have specific authority to impose: restrictions on a market intermediary’s regulated business activities; and more stringent capital monitoring and/or reporting requirements, if a market intermediary’s capital deteriorates or when it falls below minimum requirements.\(^\text{272}\)

7. Any exposure of a market intermediary to significant risks arising from the activities of other entities in its group(s) should be addressed. Consideration should be given as to the need for information about the activities of unlicensed and off balance sheet affiliates.\(^\text{273}\)

**Key Questions**

1. Are there initial and ongoing minimum capital requirements for market intermediaries? Are there also liquidity standards? Do the capital and liquidity standards address solvency?

2. Are the capital adequacy requirements structured to result in capital addressed to the full range of risks to which market intermediaries are subject (e.g., market, credit, liquidity and operational risks)?

3. Are capital adequacy requirements sensitive to the quantum of risks undertaken; that is, does required capital increase as risk increases (e.g., in the event of large market moves)?

4. Are capital standards designed to allow a market intermediary to absorb some losses, and to wind down its business over a relatively short period without loss to its clients or disrupting the orderly functioning of the markets?

5. Are relevant market intermediaries required to maintain records such that capital levels can be readily determined at any time?

6. Are the detail, format, frequency and timeliness of reporting to the regulator, and/or the SRO, sufficient to reveal a significant deterioration in the capital adequacy position of market intermediaries?

---

\(^{272}\) For example, when it is determined that an intermediary is in danger of not being able to fulfil its obligations towards its clients, the market or its creditors, or it is determined that the intermediary’s financial condition is deteriorating although still above minimum requirements. Assessors should note that although this is a regulatory requirement, in the first instance, the responsibility for managing risks rests with the firm.

7. Is the financial position of the market intermediary subject to audit by independent auditors to provide additional assurance that the financial position reflects the risks that the market intermediary undertakes?

8. Does the regulator:
   (a) Regularly review market intermediaries’ capital levels?
   (b) Take appropriate action when these reviews indicate material deficiencies?

9. (a) Does the regulator have specific authority to impose: restrictions on a market intermediary’s regulated business activities; and more stringent capital monitoring and/or reporting requirements, if a market intermediary’s capital deteriorates so as to endanger its capacity to fulfil its obligations or when it falls below minimum requirements?
   (b) Is there evidence that the regulator exercises this authority?

10. Does the prudential framework address risks from outside the regulated entity, for example, from unlicensed affiliates and off-balance sheet affiliates?

Explanatory Notes

In assessing the Principles generally, it should be understood that there are two main approaches to the setting of capital adequacy standards for market intermediaries. A “net capital” approach is used in the United States, Canada, Japan, and some other non-EU jurisdictions. The purpose of the net capital approach is, among other things, to protect clients and creditors by requiring broker-dealers to maintain sufficient liquid assets to allow the orderly self-liquidation of financially distressed broker-dealers. The other main approach is incorporated in the EU’s Capital Requirements Regulation and in the Credit Institutions Directive, which are based on the amendment to the Basel Capital Accord to incorporate market risks. The emphasis in this approach is on ensuring the capital solvency of firms. The two approaches differ somewhat in their objectives, but their practical effects overlap to a significant extent. There may be other equivalent approaches that address the performance standards of the Principles, for example, in relation to investment advisers, and there may also be other equivalent approaches in various countries. In the latter case, assessors need to consider if the rules of that particular country comply with the capital adequacy principles published by IOSCO.

There are also different approaches to assessing the risks posed to market intermediaries by affiliated entities. One approach (used in the United States) is to require the regulated entity,
the registered broker-dealer, to provide extensive “risk assessment” information to the regulator concerning its material affiliates. A number of other jurisdictions have regulatory authority over such affiliates and may require the affiliates to provide information to them directly.

The EU generally requires securities firms to provide capital adequacy information on a consolidated basis, and to meet capital requirements at the consolidated group level as well as at the level of individual regulated entities. The assessment criteria recognize that other approaches may be employed.

Some market intermediaries act in such a way that their activity is of lower risk. Where the market intermediary does not handle client money directly, is an inter-dealer broker with no principal at risk, or operates on a matched-book basis,277 it may be appropriate to set capital requirements at a level lower than the level applicable to market intermediaries that carry client assets or take principal positions for their own account.

Capital adequacy requirements may explicitly refer to a particular risk, but be set at a level that in practice covers other risks as well. The assessor should inquire about the method of minimum capital determination being used, and the types of market intermediaries in the jurisdiction to which it applies; taking into account that more than one method or technique of computing capital or capital requirements is permitted under the Principles.278

**Benchmarks**

*Fully Implemented*

Requires affirmative responses to all applicable Questions.

*Broadly Implemented*

Requires affirmative responses to all applicable Questions except to Question 10.

*Partly Implemented*

Requires affirmative responses to all applicable Questions except to Questions 6, 9(b) and 10.

*Not Implemented*

Inability to respond affirmatively to one or more of Questions 1, 2, 3, 4, 5, 7, 8(a), 8(b), and 9(a).

---

277 Please note that this does not include market intermediaries that take positions on their own account.

Market intermediaries should be required to establish an internal function that delivers compliance with standards for internal organization and operational conduct, with the aim of protecting the interests of clients and their assets and ensuring proper management of risk, through which management of the intermediary accepts primary responsibility for these matters.

Market intermediaries should conduct their businesses in a way that protects the interests of their clients and their assets and helps preserve the integrity of the market.

Regulation should require that market intermediaries have in place appropriate internal policies and procedures for observance of securities laws and appropriate internal organization and risk management systems. Regulation should not be expected to remove risk from the marketplace but should aim to ensure that there is proper management of that risk.

Instances of operational breach can occur despite the existence of internal procedures designed to prevent misconduct or negligence. It is not practicable for the regulator to oversee adherence to those internal procedures on a day-to-day basis; that is the primary responsibility of the management of the market intermediary. Management must ensure that they are able to discharge that responsibility.

Key Issues

Management and Supervision

1. The management of a market intermediary should bear primary responsibility for ensuring the maintenance of appropriate standards of conduct and adherence to proper procedures by the whole firm. This includes ensuring that the firm is structured appropriately and has an adequate internal structure and controls, given the types of business in which it engages, including any activities which have been outsourced, to ensure investor protection and the management of risks.

   (a) Management must ensure adherence to internal procedures on a day-to-day basis. They must understand the nature of the firm’s business, its internal control procedures and environment and its policies on the assumption of risk, and clearly understand the extent of their own authority and responsibilities.

   (b) All relevant information about the business must be:

      (i) timely;

      (ii) readily accessible;

      (iii) and regularly reported to management,

and such information should be subject to procedures intended to maintain its security, availability, reliability and integrity.

---

2. Periodic evaluation of risk management processes within a regulated entity is necessary. This should be conducted by someone of sufficient autonomy so as not to compromise the evaluation. SROs and third parties, such as external auditors, may be used to assist in this process.

Organizational requirements

3. Markets intermediaries should have systems or processes in place that seek to ensure that they are complying with all applicable laws and regulations and to reduce their risk of legal or regulatory sanctions, financial loss or reputational damage.

4. With respect to DMIs specifically:

   (a) DMIs should be subject to business conduct standards, which should be tailored, as appropriate, for the OTC derivatives market.

   (b) DMIs should have risk management systems and organization to properly identify and manage their OTC derivatives-related business risks.

   (c) DMIs should be required to design supervisory policies and procedures to manage their OTC derivatives operations and the activities of their representatives.

   (d) DMIs should be required to retain OTC derivatives transaction records and be able to provide them in a timely, organized and readable manner. The record retention period for OTC derivatives transactions should apply for a specified period after its termination, maturity or assignment.

5. The details of the appropriate internal organization of a firm, including risk management, internal audit and compliance functions, will vary according to the size of the firm, the nature of its business and the risks it undertakes. Information regarding the firm’s internal organization should also be available to the regulator upon request. With regards to a market intermediary’s internal organization, the regulatory framework should require the following to be considered:

   (a) Compliance with all applicable legal and regulatory requirements, as well as with the firm’s own internal policies and procedures, should be monitored, where appropriate, by a separate compliance function that reports directly to senior management in a structure that makes it independent from operational divisions.

   (b) Maintenance of effective policies and operational procedures and controls in relation to the firm’s day-to-day business, including:

      (i) clear policies covering the risk management and internal controls applicable to proprietary trading; and

      (ii) procedures that seek to ensure the integrity, security, availability, reliability and thoroughness of all information, business continuity, as well as outsourcing procedures.

---

281 See Id, p. 7.

282 Those operational procedures could include consideration of the use of risk transfer mechanisms (and the implications of their use in transforming or transferring risks).
PRINCIPLES RELATING TO MARKET INTERMEDIARIES

(c) Evaluation of the “effectiveness” of those operational procedures and controls in light of whether they serve reasonably to ensure:

(i) The integrity of the firm’s dealing practices, including the treatment of all clients in a fair, honest and professional manner.

(ii) Appropriate segregation of key duties and functions, particularly those duties and functions which, when performed by the same individual, may result in undetected errors, or may be susceptible to abuses which expose the firm or its clients to inappropriate risks.

(d) Addressing any conflicts of interest arising between its interests and those of its clients. Where the potential for conflicts arise, a market intermediary should ensure fair treatment of all its clients by taking reasonable steps to manage the conflict through organizational measures to prevent damage to its clients’ interest, such as: internal rules, including rules of confidentiality; proper disclosure; or declining to act where conflict cannot be resolved.

6. If Direct Electronic Access (DEA) is allowed, market intermediaries should use controls, including automated pre-trade controls, which can limit or prevent a DEA client from placing an order that exceeds the market intermediary’s existing position or credit limits.283

Protection of Clients

7. Where a market intermediary has control of, or is otherwise responsible for, assets belonging to a client which it is required to safeguard, it should make adequate arrangements to safeguard clients’ ownership rights (for example, segregation and identification of those assets). These measures are intended to: provide protection from defalcation; facilitate the transfer of positions in cases of severe market disruption; prevent the use of client assets for proprietary trading or the financing of a market intermediary’s operations; and assist in orderly winding up of the insolvency of an individual market intermediary and the return of client assets.

Particular obligations of an intermediary should include:

(a) An intermediary should maintain accurate and up-to-date records and accounts of client assets that readily establish the precise nature, amount, location and ownership status of client assets and the clients for whom the client assets are held. The records should also be maintained in such a way that they may be used as an audit trail.284

(b) Where client assets are to be held or placed in a foreign jurisdiction and will be subject to the client asset protection and/or insolvency regimes of that foreign jurisdiction and not the home jurisdiction, the intermediary should inform the clients of that fact. Any required disclosure of the relevant client asset protection regime(s) and arrangements and the consequent risks involved should be in writing and be prepared in clear, plain, concise and understandable language. Legal or financial jargon not commonly understood should be avoided.\textsuperscript{285}

8. With respect to DMIs specifically, for centrally cleared OTC derivatives transactions, DMIs should segregate collateral belonging to clients from their own proprietary assets and employ an account structure that enables the efficient identification and segregation of positions and collateral belonging to DMI clients.

9. Intermediaries as defined in IOSCO’s Report on \textit{Suitability Requirements with respect to the Distribution of Complex Financial Products} should be required to adopt and apply appropriate policies and procedures to distinguish between retail and non-retail customers when distributing complex financial products. The classification of customers should be based on a reasonable assessment of the customer concerned, taking into account the complexity and riskiness of different products. The regulator should consider providing guidance to intermediaries in relation to customer classification.\textsuperscript{286}

10. Market intermediaries should have an efficient and effective mechanism to address investor complaints.

11. With regards to a market intermediary’s conduct with clients, the following are to be considered as important components:

   (a) When establishing a business relationship with a client, a market intermediary should identify, and verify, the client’s identity using reliable, independent data. A market intermediary should also obtain sufficient information to identify persons\textsuperscript{287} who beneficially own or control securities and, where relevant, other accounts.\textsuperscript{288} Procedures to implement this requirement will facilitate a market intermediary’s ability to mitigate the risk of being implicated in fraud, money laundering, or terrorist financing.

\textsuperscript{285} Id, p. 5 (Principle 5 Means of Implementation 2).
\textsuperscript{287} For example, by obtaining the beneficial owner’s name and address. See \textit{Principles on Client Identification and Beneficial Ownership for the Securities Industry}, supra, pp. 4–6.
\textsuperscript{288} For further clarification of this requirement, see the discussion under Principle 2: Id, pp. 7–8.
(b) A market intermediary should obtain and retain from its clients any information about their circumstances and investment objectives relevant to the services to be provided. Where the activities of a market intermediary extend to giving specific advice, the advice should be given based on an understanding of the needs and circumstances of the customer.  

(c) The client should be able to obtain a written contract of engagement or account agreement, or a written form of the general and specific conditions of doing business through the market intermediary.

(d) Records containing the above information should be kept for a reasonable number of years in accordance with best practices in order to facilitate investor protection and exchange of information between jurisdictions. If market intermediaries are permitted to use reliable third parties to meet their client obligations under these Principles, they nonetheless remain responsible for the performance of such obligations. Policies and procedures should be established which ensure the integrity, security, availability, reliability and thoroughness of all information, including documentation and electronically-stored data, relevant to the market intermediary’s business operations.

(e) A market intermediary should disclose or make available adequate information to its client in a comprehensible and timely way so that the client can make an informed investment decision. It may be necessary for regulation to require a particular form of disclosure where products carry risk that may not be readily apparent to the retail client. Recruitment and training should seek to ensure that staff who provide investment advice understand the characteristics of the products they advise upon.

(f) A market intermediary should promptly, and at suitable intervals, provide each client with a report of the value and composition of the clients’ account or portfolio including, as appropriate, an account of transactions and balances.

(g) A market intermediary should provide each client with information about fees and commissions.

(h) Disclosures of key information regarding collective investment schemes (CIS) to retail investors in their distribution prior to the point of sale should be clear, accurate and not misleading to the target investor.

---

289 In this context, the “know your customer” principle relates to suitability of investment recommendations and disclosure obligations. It should be distinguished from obligations relating to client identification imposed to prevent money laundering.

291 Recommendations Regarding the Protection of Client Assets, supra, p. 3 (Principle 2).

292 The term “key information” is described by IOSCO in this context as “necessarily vary[ing] depending on the type of financial product being offered. For some complex financial products with a multitude of risks, the amount of key information that a regulator might mandate for immediate disclosure to the investor under a “layered approach” may be greater than for less complicated products.”: see Principles of Point of Sale Disclosure, Report of the Technical Committee of IOSCO, November 2009, p. 28 fn. 30, available at http://www.iosco.org/library/pubdocs/pdf/IOSCOPD310.pdf.

293 Id, p. 4 fn. 5.

294 Id, p. 31 (Principle 5).
PRINCIPLES RELATING TO MARKET INTERMEDIARIES

(i) A market intermediary should act: with due care and diligence in the best interests of its clients and protect their assets; and in a way that helps preserve the integrity of the market.

(j) The regulator should be able to demonstrate that it has in place a supervision program, which includes internal processes, skilled and knowledgeable staff and other resources, that monitors compliance by market intermediaries with these requirements.295

Key Questions

Management and Supervision

1. With regards to a market intermediary’s internal organization, does the regulatory framework require the following to be considered:
   (a) An appropriate management and organization structure, including in relation to activities that have been outsourced?296
   (b) Adequate297 internal controls?
   (c) Management that is required to bear primary responsibility for ensuring the maintenance of appropriate standards of conduct and adherence to proper procedures by the whole firm?

2. Does the regulatory framework require market intermediaries: to provide all relevant information about the business in a timely, readily accessible way; and to regularly report to management? Is such information subject to procedures intended to maintain its security, availability, reliability and integrity?

3. Does the regulatory framework require a market intermediary to be subject to an objective,298 periodic evaluation of its internal controls and risk management processes?

Organizational Requirements

4. Does the regulatory framework include the assessment of a market intermediary’s compliance function, taking into account the market intermediary’s size and business? When the regulator becomes aware of deficiencies are steps taken to require market intermediaries to improve their compliance function?

5. Does the regulatory framework require a market intermediary to establish and maintain appropriate systems of client protection, risk management and internal and operational controls, including policies, procedures and controls relating to all aspects of its day-to-day business intended reasonably to ensure:
   (a) The integrity of the firm’s dealing practices, including the treatment of all clients in a fair, honest and professional manner?

295 Recommendations Regarding the Protection of Client Assets, supra, p. 7 (Principle 7).
296 See Principles on Outsourcing of Financial Services for Market Intermediaries, supra, pp. 3–4.
297 The notion of adequacy should take into account the size of the firm, the nature of its business and the types and amount of risks it undertakes.
298 This evaluation should be performed by someone of sufficient autonomy so as not to compromise the evaluation.
(b) Appropriate segregation of key duties and functions, particularly those duties and functions which, when performed by the same individual, may result in undetected errors, or may be susceptible to abuses, which expose the firm, or its clients, to inappropriate risks?

6. With respect to DMIs specifically:

(a) Does the regulatory framework require DMIs to be subject to business conduct standards, tailored, as appropriate, for the OTC derivatives market?

(b) Does the regulatory framework require DMIs to have risk management systems and organization to properly identify and manage their OTC derivatives related business risks?

(c) Does the regulatory framework require DMIs to design supervisory policies and procedures to manage their OTC derivatives operations and the activities of their representatives?

(d) Does the regulatory framework require DMIs to retain OTC derivatives transaction records and be able to provide them in a timely, organized and readable manner? Does the record retention period for OTC derivatives transactions apply for a specified period after the transactions’ termination, maturity or assignment?

7. Taking into account Principle 8, does the regulatory framework require a market intermediary:

(a) To endeavour to address a conflict of interest arising between its interests and those of its clients, or between its clients?

(b) Where the potential for conflicts arises:

(i) to have mechanisms in place to manage conflicts of interests that seek to ensure an unbiased decision making process and fair treatment of all its clients; and

(ii) consider further steps if the mechanisms identified in (a) prove inadequate, which may include disclosure of the conflict, internal rules of confidentiality, and declining to act where a conflict cannot be resolved?

8. If DEA is allowed, does the regulatory framework require market intermediaries to use controls, including automated pre-trade controls, which can limit or prevent a DEA client from placing an order that exceeds the market intermediary’s existing position or credit limits?

PRINCIPLES RELATING TO MARKET INTERMEDIARIES

Protection of Clients

9. If a market intermediary has control of, or is otherwise responsible for, assets belonging to a client which it is required to safeguard, are there regulations that require proper protection for them (for example, segregation and identification of those assets) by the market intermediary? Do these measures facilitate the transfer of positions and assist in the orderly winding up in the event of financial insolvency and the return of client assets?

10. Does the regulatory framework require market intermediaries to maintain accurate and up-to-date records and accounts of client assets that readily establish the precise nature, amount, location and ownership status of client assets and the clients for whom the client assets are held? Does the regulatory framework require that the records be maintained in such a way that they may be used as an audit trail?301

11. Where client assets are to be held or placed in a foreign jurisdiction and will be subject to the client asset protection and/or insolvency regimes of that foreign jurisdiction and not the home jurisdiction, does the regulatory framework require the intermediary to inform the clients of that fact? Does the regulatory framework require market intermediaries to provide any required disclosures of the relevant client asset protection regime(s) and arrangements and the consequent risks involved in writing, which is prepared in clear, plain, concise and understandable language and that avoids the use of legal or financial jargon that is not commonly understood?

12. With respect to DMIs specifically, for centrally cleared OTC derivatives transactions, does the regulatory framework require DMIs to segregate collateral belonging to clients from their own proprietary assets and employ an account structure that enables the efficient identification and segregation of positions and collateral belonging to DMI clients?

13. Does the regulatory framework require market intermediaries to provide for an efficient and effective mechanism to address investor complaints?

14. Does the regulatory framework require market intermediaries to identify, and verify, the client’s identity using reliable, independent data, including persons who beneficially own or control securities?

15. Does the regulatory framework require market intermediaries to obtain and retain information from a client about their circumstances and investment objectives relevant to the services to be provided?

16. Does the regulatory framework require a market intermediary to “know its customer” before providing specific advice to a client?

17. Does the regulatory framework require that intermediaries, as defined in IOSCO’s Report on Suitability Requirements with respect to the Distribution of Complex Financial Products302 adopt and apply appropriate policies and procedures to distinguish between retail and non-retail customers when distributing complex financial products?

301 Recommendations Regarding the Protection of Client Assets, supra, p. 3 (Principle 1).
302 See Key Issue 9 and footnote 286.
PRINCIPLES RELATING TO MARKET INTERMEDIARIES

18. Does the regulatory framework require market intermediaries to keep records containing the above information for a reasonable number of years? Is the market intermediary required to maintain those books and records in such a way that allows the supervisor to be able to find all the relevant facts relating to a particular transaction?

19. Does the regulatory framework require market intermediaries to provide to the client a written contract of engagement or account agreement, or a written form of the general and specific conditions of doing business through the market intermediary?

20. Does the regulatory framework require a market intermediary to disclose, or make available, information to its client so that the client can make an informed investment decision?

21. Does the regulatory framework require market intermediaries to provide a client with statements of account (including details on the client assets held for or on behalf of such a client) on a regular basis (at least annually) and reasonably promptly upon request?

22. Does the regulatory framework require market intermediaries to provide a client with information about any fees and commissions associated with the client’s transactions?

23. Does the regulatory framework require market intermediaries to act with due care and diligence in the best interests of its clients and their assets and in a way that helps preserve the integrity of the market?

24. Can the regulator demonstrate that it has in place a supervision program, including internal processes that seek to monitor compliance by market intermediaries with these requirements?

Explanatory Notes

Treatment of client assets also may be relevant to adequacy of capital as addressed in Principle 30.

What constitutes adequate disclosure by a market intermediary may depend on the type of services being offered. For example, the disclosures required of a pure order taker would be different from those of a full-service broker also providing investment advice.

Key Question 19 should not be interpreted as imposing or requiring a fiduciary duty on all market participants in dealing with their clients.

---

303 Recommendations Regarding the Protection of Client Assets, supra, p. 3 (Principle 2).
304 Id, p. 7 (Principle 7).
The term “compliance function” is used as a generic reference to refer to the range of roles and responsibilities for carrying out specific compliance activities and responsibilities. The expression does not intend to denote any particular organizational structure, recognizing the diversity of size and type of securities firms.  

In smaller firms, there may be an overlap between senior management who trade or provide advice and the compliance function. In such a case, procedures are required to prevent conflicts of interest or other problems regarding the performance of their compliance responsibilities.

**Benchmarks**

*Fully Implemented*

Requires affirmative responses to all applicable Questions.

*Broadly Implemented*

Requires affirmative responses to all applicable Questions except to Question 13.

*Partly Implemented*

Requires affirmative responses to all applicable Questions except to Questions 3, 5(a), 5(b), 6(a), 6(b), 6(c), 6(d), 7(a) or (b), 8 (if applicable), 11, 12, 13, 14, 16, 19, 20 and 23.

*Not-Implemented*

Inability to respond affirmatively to one or more of Questions 1(a), 1(b), 1(c), 2, 4, 9, 10, 15, 17, 18, 21, 22, 24, 25.

---

305 See Compliance Function at Market Intermediaries, supra, p. 7.
306 See Id, p. 12. Assessors need to recognize the difficulty of achieving complete independence for the compliance function in smaller firms.
Principle 32 There should be procedures for dealing with the failure of a market intermediary in order to minimize damage and loss to investors and to contain systemic risk.

The failure of a market intermediary can have a negative impact on clients and counterparties and may have systemic consequences. The regulator must have a clear and flexible plan in place to deal with the eventuality of failure by market intermediaries.

Key Issues

1. The regulator should have a clear plan for dealing with the eventuality of failure by market intermediaries. The circumstances of financial failure are unpredictable so the plan should be flexible.

2. The regulator should attempt to minimize damage and loss to investors and to the functioning of the financial system caused by the failure of a market intermediary. A combination of actions, may be necessary:
   (a) to restrain conduct;
   (b) to aim to ensure that assets are properly managed; and
   (c) to provide information to the market.

3. Depending upon the prevailing domestic bank regulatory model, it may also be necessary to cooperate with banking regulators and, if the domestic arrangements require it, insolvency authorities. As a minimum position, the regulator should have identified contact persons at other relevant domestic and foreign market authorities.\(^{307}\)

4. The regulator should have a mechanism/monitoring system in place to determine the potential systemic impact of the failure of a market intermediary in a very short time frame.

Key Questions

1. Does the regulator have clear plans for dealing with the eventuality of a firm’s failure, including a combination of activities: to restrain conduct; to ensure assets are properly managed; and to provide information to the market, as necessary?

2. Are there early warning systems or other mechanisms in place to give the regulator notice of a potential default by a market intermediary, and time to address the problem and take corrective actions?

---

3. **Does the regulator have the power to take appropriate actions:** In particular, can it:

   (a) Restrict activities of the market intermediary with a view to minimizing damage and loss to investors?

   (b) Require the market intermediary to take specific actions, for example, moving client accounts to another market intermediary?

   (c) Request appointment of a monitor, receiver, curator or other administrator, or, in the absence of such power, can the regulator apply to the relevant authorities to take possession or control of the assets held by the market intermediary or by a third party on behalf of the market intermediary?

   (d) Apply other available measures intended to minimize client, counterparty and systemic risk in the event of intermediary failure, such as, client and settlement insurance schemes, or guarantee funds?

4. **Can the regulator demonstrate that it has the power and practical ability to take these actions against a market intermediary?**

5. **Do the regulator’s processes and procedures for addressing financial disruption include communication and cooperation with other regulators, both domestic and foreign, where appropriate, and is there evidence that contact arrangements are in place, and that such cooperation occurs?**

**Explanatory Notes**

In assessing the adequacy of the regulatory regime to protect client assets in the possession of failed or failing market intermediaries, in addition to consideration of the adequacy of capital and other prudential regulations, it is appropriate to consider the adequacy of arrangements for segregation, if applicable. Also, it is appropriate to consider the availability and adequacy of insurance and/or compensation schemes designed to protect clients' funds and securities in the event of a market intermediary’s insolvency, as well as settlement assurance schemes or other arrangements that may minimize counterparty and systemic risk.

The assessor should indicate what combination of arrangements is available and how they are intended to mitigate risk.

Assessments of Principle 32 should be consistent with any findings under the assessment of Principle 6 on systemic risk, and with any findings related to risk management practices under Principles 29 and 30.
PRINCIPLES RELATING TO MARKET INTERMEDIARIES

Benchmarks

Fully Implemented

Requires affirmative responses to all applicable Questions.

Broadly Implemented

Requires affirmative responses to all applicable Questions except to Question 3(d).

I. PRINCIPLES RELATING TO SECONDARY AND OTHER MARKETS

1. Preamble

Regulators in all jurisdictions acknowledge that investors want fair, efficient and transparent markets. The Principles under this section are intended to promote these objectives. The fairness of the markets is closely linked to investor protection and to the prevention of improper trading practices.

In Principles 33 to 37, the word “markets” should be understood in its widest sense, including any facility used to trade securities or derivatives related to equity, debt and commodity derivative products. However, the word “markets” used in this section does not cover public offerings of securities which are meant to be dealt with under Principles 16 through 18 relating to issuers. In addition to traditional organized exchanges, secondary and other markets should be understood to include various forms of non-exchange trading market systems. These systems include among others alternative trading systems (ATSs), multilateral trading facilities (MTFs), organized trading facilities (OTFs), and “proprietary” systems developed by intermediaries, typically offering their services to other brokers, banks, and institutional/retail investors who meet the operator’s credit standards. However, there are fundamental differences between the OTC derivatives and traditional securities markets meaning that in many cases these principles are not applicable to OTC derivatives markets. Moreover, OTC derivatives are not resold and do not have a secondary market. For these reasons, Principles 33 to 37 apply to OTC derivatives traded on authorized exchanges and trading systems only where expressly noted, and do not apply to other OTC derivatives.

Notwithstanding the broad meaning of “markets”, for assessment purposes this Methodology is directed to topics that have been addressed by IOSCO reports. Authorized exchanges and regulated trading systems, i.e., market systems that bring together multiple buyers and sellers in a manner that results in completed transactions or trades, are the main focus of this assessment.

Regulation appropriate to a particular secondary or other market will depend upon the nature of the market, its products, and its participants. For example, this Methodology has taken account of the particular characteristics of physical commodity derivatives markets. The applicable Principles help to ensure that such markets serve their fundamental price discovery and hedging functions, while operating free from manipulation and susceptibility to abusive trading schemes.308

Regulation will increasingly need to take account of the growing internationalization of trading, and the impact of technological developments on markets and their infrastructure.309

The operation of some exchanges and trading systems is performed by the markets and systems themselves. In others, it is undertaken by a separate entity that acts as the operator. In this section, the terms “authorized exchange” and “regulated trading system” should be understood to include both of these types of exchanges and trading systems.310

310 References to “operator” herein should be understood to include the authorized exchange or regulated trading system and vice versa.
The level of regulation will depend upon the characteristics of the market in question, including: the structure of the market and the sophistication of its participants; rights of access; types of products traded; the degree of integration with other markets; the extent of cross-border business; the impact of technological developments; and the ability of the operators to fulfil any self-regulatory and risk management role under the powers and authority granted by law.

Because regulation may differ according to market structure, market participant or product, information about such differences, and the rationale for such differences, is an important component of any assessment. For example, the Principles do not specify particular regulatory methodologies. In most cases the Principles may be implemented by legislation, administrative rules, advisories, guidelines or procedures, market rules, equitable principles of trade or best practices, or professional market codes of conduct, agreed market conventions or, for electronic markets, integrated into the algorithm; provided, however, that whatever method of implementation is chosen is enforceable to the extent necessary to achieve its objectives and takes into account the Benchmarks.

Accordingly, in order to accurately assess regulatory structure, assessors must understand the market structure, including clearing and settlement arrangements, types of participants and international linkages (both foreign and domestic). The Introduction to this Assessment Methodology provides further guidance regarding the effect of market structure on the approach to undertaking an assessment.

The Principles also recognize that “in some cases it will be appropriate that a trading system should be largely exempt from direct regulation…” but will require approval from the relevant regulator after proper consideration by the regulator of the type of approval (or exemption) necessary. If this is the case, the criteria should be transparent, accessible and consistently applied.311 The effect of exemptions on the market and public may be relevant to inquiries into the “perimeter of regulation” inquiry under Principle 7.

In addition, in many jurisdictions, the authorization or recognition process and relevant requirements for electronic trading systems sponsored by foreign operators may differ from the process for fully domestic systems.312 Similarly, some jurisdictions may provide tiered levels of regulation for markets depending upon the type of product traded and sophistication of the participants. Still other jurisdictions regulate alternative trading systems as brokers and apply regulation consistent with that for market intermediaries under these Principles coupled with certain rules on transparency, insider trading and market abuse prohibitions. Such flexibility in regulation is consistent with the Principles. Differences related to the type of service provided, product traded and participants in the market are generally accepted bases for drawing appropriate regulatory distinctions.313

311 For example, exemption from some requirements for trading systems with limited trading volumes may be appropriate. Also, in many jurisdictions, the trading markets for sovereign (and in some cases, sub-sovereign) debt securities are not subject to regulation, or subject to more limited regulation, than the trading markets for corporate securities.

312 There should, however, be no unnecessary barriers to entry and exit from markets and products. In some cases, these may be caused by laws not subject to the control of regulators, such as fiscal or other general laws: see Annexure 1. For example, however, access criteria can be based on mutual recognition, additional disclosure or other requirements.

Confidence in the rule of law, the enforceability of contracts and the adequacy of commercial and insolvency law are critical to the effective regulation of secondary and other markets, so to the extent gaps exist these should be identified in the assessment.\textsuperscript{314}

2. **Scope**

Principles 33 to 38 examine how a jurisdiction’s overall regulatory structure ensures the integrity of regulated markets.

Principles 33 and 34 examine the general requirements for authorization of exchanges and trading systems and their ongoing supervision. Specifically, Principle 33 examines the criteria that are required when an exchange or trading system is initially authorized in a jurisdiction. Principle 34, on the other hand, examines the procedures by which the regulator is assured of the ongoing compliance by an authorized exchange or regulated trading system with the relevant conditions thought necessary as prerequisites to authorization.

Principles 35, 36 and 37 focus on specific regulatory objectives that are intended to promote market integrity. Principle 35 focuses on the extent to which the regulatory structure promotes transparency (defined in terms of the availability of pre-trade and post-trade information), which is important for the price discovery process, mitigating the potentially adverse impact of market fragmentation, with respect to pre-trade transparency, and/or the efficient functioning of the market, with respect to post-trade transparency.\textsuperscript{315} Principle 36 focuses on the regulations and mechanisms that prohibit, detect and deter manipulative (or attempts at manipulative) conduct, fraudulent or deceptive conduct, or other market abuses. Finally, Principle 37 focuses on the mechanisms in place to ensure the proper management of large exposures, defaults, and market disruptions. Principle 37 also addresses the need for short selling regulatory requirements in equity security markets, mitigating risks related to OTC derivatives transactions, and addressing risks in the commodity derivatives markets.

Principle 38 makes clear that because of the potential for disruptions to securities and derivatives markets and to payment and settlement systems, both domestic and non-domestic, securities settlement systems, central securities depositories, trade repositories and central counterparties should be subject to effective regulation and oversight to ensure that they are fair, effective and efficient and that they reduce systemic risk.

\textsuperscript{314} Annexure 1.

\textsuperscript{315} See *Regulatory Issues Raised by the Impact of Technological Changes on Market Integrity and Efficiency*, supra, pp. 69–70.
3. **Principles 33 through 37**

| Principle 33 | The establishment of trading systems including securities exchanges should be subject to regulatory authorization and oversight. |

The regulator’s authorization of exchanges and trading systems, including the review and approval of trading rules, helps to ensure fair and orderly markets. The fairness of markets is closely linked to investor protection and, in particular, by the prevention of improper trading practices.

Regulation should seek to ensure that investors are provided fair access to market facilities on a non-discriminatory basis. Regulation should promote market practices and structures that ensure fair treatment of orders and a reliable price formation process. This includes the requirement of an appropriate post-trade reporting system that provides the public promptly with information concerning the prices at which trades were executed.

**Key Issues**

Criteria for Authorization

*Exchanges or Trading Systems subject to Regulation*

1. Regulation should provide for the assessment of the initial and ongoing propriety and competence of the operator of an exchange or trading system as a secondary or other market as defined in the Preamble. The operator should be accountable to the regulator and, when assuming principal, settlement, guarantee or performance risk, must comply with prudential and other requirements designed to reduce the risk of non-completion of transactions.

Supervision

2. The regulator should assess the reliability of all the arrangements made by the operator for the monitoring, surveillance and supervision of the exchange or trading system and its members or participants to ensure fairness, efficiency, transparency and investor protection, as well as compliance with securities legislation. There must be mechanisms in place to identify and address disorderly trading conditions and to ensure that contravening conduct, when detected, will be dealt with. Details of trading control mechanisms (including, but not limited to, trading halts, volatility interruptions, limit-

---

PRINCIPLES RELATING TO SECONDARY AND OTHER MARKETS

up/limit-down controls, and other trading limitations)\(^{317}\) and assistance available to the regulator in circumstances of potential trading disruption on the market should be provided to the regulator.

In order to provide an appropriate level of stability, regulators should require trading venues to have in place mechanisms to help ensure the resiliency, reliability and integrity (including security) of critical systems.\(^{318}\) While the prevention of failures is important, trading venues should also be required to be prepared for dealing with such failures and, in this context, establish, maintain and implement as appropriate a Business Continuity Plan.\(^{319}\)

3. When functions are outsourced, such outsourcing does not negate the liability of the outsourcing market for any and all functions that the market may outsource to a service provider. The outsourcing market must retain the competence and ability to be able to ensure that it complies with all regulatory requirements. Accordingly, with respect to the outsourcing of key regulatory functions, markets should consider how and whether such functions may be outsourced. Outsourcing should not be permitted if it impairs the market authority’s\(^{320}\) ability to exercise its statutory responsibilities, such as proper supervision and audit of the market.

Products and Participants

4. The regulator should, as a minimum requirement, be informed of the types of securities and products to be traded on the exchange or trading system, and should review/approve the rules governing the trading of the product, where applicable. In doing so, the market and/or the regulator should:

(a) Consider product design principles, where applicable, listing requirements and trading conditions. Due to the unique characteristics of exchange-traded commodity derivatives markets, the market authority should follow the contract design principles set out in the *Principles for the Regulation and Supervision of Commodity Derivatives Markets.*\(^ {321}\)

\(^{317}\) See Recommendation 2 in *Regulatory Issues Raised by the Impact of Technological Changes on Market Integrity and Efficiency*, supra, p. 45.

\(^{319}\) See Id, Recommendation 2 at p.34.

\(^{320}\) The term “market authority” is used in this context to refer to the authority in a jurisdiction that has statutory or regulatory powers with respect to the exercise of certain regulatory functions over a market. The relevant market authority may be a regulatory body, an SRO and/or the market itself: *Principles on Outsourcing by Markets*, Final Report, Report of the Technical Committee of IOSCO, July 2009, fn. 2 p.3, available at https://www.iosco.org/library/pubdocs/pdf/IOSCOPSIS99.pdf.

\(^{321}\) See *Principles for the Regulation and Supervision of Commodity Derivatives Markets*, supra. These principles are intended to apply primarily to exchange-traded, physical commodity derivatives e.g., futures contracts, options on futures contracts and options, for which the underlying reference interest is a physical commodity or physical commodity index or price series and which may settle in cash or by physical delivery. These commodity derivatives instruments should be distinguished from transactions in the actual underlying physical market for commodities: at pp. 11–12. See also *The Application of the Tokyo Communiqué to Exchange-Traded Financial Derivatives Contracts*, Report of the Technical Committee of IOSCO. September 1998, available at https://www.iosco.org/library/pubdocs/pdf/IOSCOPSIS57.pdf, which for commodity derivatives was superseded by the above-mentioned report, and which is not intended to apply to equity derivatives: see p. 2.
(b) Ensure that access to the system or exchange and to associated products is fair, transparent and objective, and consider the related admission criteria and procedures.322

Execution Procedures

5. The order execution rules, as well as any cancellation procedures, should be disclosed to the regulator and to market participants, and should be applied fairly to all participants.

The exchange or trading system’s order routing procedures should also be clearly disclosed to the regulator and to market participants, applied fairly, and should not be inconsistent with relevant securities regulation (e.g., client precedence or prohibition of front running or trading ahead of customers).323

6. The fairness of latency differences resulting from different technical connection options and, in particular, from co-locating high speed algorithmic trading systems adjacent to exchange servers raises significant technical and market integrity issues.324

7. Direct electronic access (DEA) refers to the process by which a person transmits orders on their own (i.e., without any handling or re-entry by another person) directly into the market’s trade matching system for execution.325

8. A market should not permit DEA unless there are in place effective systems and controls reasonably designed to enable the management of risk with regard to fair and orderly trading including, in particular, automated pre-trade controls that enable intermediaries to implement appropriate trading limits.326

9. Markets should provide member intermediaries with access to pre-trade and post-trade information (on a real-time basis) to enable these intermediaries to implement appropriate monitoring and risk management controls.327

322 See Regulatory Issues Raised by the Impact of Technological Changes on Market Integrity and Efficiency, supra, p. 45.
323 Not all jurisdictions grant SRO obligations to markets. The specific responsibilities of a market will always be defined by the applicable laws and regulations.
325 Id, Appendix 1, definition of DEA.
326 Id, p. 20, Principle 6.
327 Id, p.17, Principle 5. This Principle reflects the Technical Committee’s recognition that in the dispersed world of electronic trading, intermediaries must have timely access to relevant pre-trade and post-trade information in order to facilitate the performance of their traditional risk management functions in the context of DEA.
Trading Information

10. Information on completed transactions, trading information and rules and operating procedures should be available, and the regulator should verify that it is provided on an equitable basis to all similarly situated market participants. In an environment where trading occurs across multiple trading spaces, regulators should seek to ensure that proper arrangements are in place in order to facilitate the consolidation and dissemination of information as close to real time as is technically possible and reasonable.

   (a) Any categorization of participants, for the purpose of access to pre-trade information, should be made on a reasonable basis.

   (b) Any differential access to such information should not unfairly disadvantage specific categories of participants.

11. Full trade documentation and an audit trail should be available to the regulator.

Key Questions

Exchanges or Trading Systems subject to Regulation

1. Does the establishment of an exchange or trading system require authorization?

2. Are there criteria for the authorization of exchange and trading system operators that:

   (a) Require analysis and authorization of the market by a competent authority?

   (b) Seek evidence of operational or other competence of the operator of an exchange or trading system?

   (c) Require the operator of an exchange or trading system that assumes principal, settlement, guarantee or performance risk, to comply with prudential and other requirements designed to reduce the risk of non-completion of transactions (e.g., mandatory margin assessment and collection, capital or financial resources, member contributions, guaranty fund, credit or position limits)?

---

328 Dark pools, and transparent markets that offer dark orders, should provide market participants with sufficient information so that they are able to understand the manner in which their orders are handled and executed: see Principle 5 at p. 30 in *Principles for Dark Liquidity*, Final Report, Report of the Technical Committee of IOSCO, May 2011, available at https://www.iosco.org/library/pubdocs/pdf/IOSCOPD353.pdf.

329 Market participants include not only market members, but also investors in a larger sense.

331 To the extent a trading system is treated as a broker the applicable requirements under these Principles would be those related to market intermediaries, coupled with any transparency, insider trading or market abuse requirements.

332 The term “authorization” should be interpreted to include “licensed”, “granted authority to do investment business” or “recognition.”
(d) Permit the regulator to impose ongoing conditions (as appropriate) on the operator of an authorized exchange or regulated trading system, such as the obligation to establish: rules; policies; and procedures, to prevent fraudulent behaviour, treat all members or participants fairly, and have the capacity to carry out the market’s and the competent authority’s obligations?

Supervision

3. Does regulation require an assessment of:

(a) The reliability of all arrangements made by the operator for the monitoring, surveillance and supervision of an exchange or trading system and its members or participants to ensure fairness, efficiency, transparency and investor protection, as well as compliance with securities legislation? The market’s dispute resolution and appeal procedures or arrangements as appropriate, its technical systems standards and procedures related to operational failure, information on its recordkeeping system, reports of suspected breaches of law, arrangements for holding client funds and securities, if applicable, and information on how trades are cleared and settled?

(b) Whether the trading venue has in place suitable trading control mechanisms (such as trading halts, volatility interruptions, limit-up/limit-down controls and other trading limitations) to deal with volatile market conditions?

(c) Assistance available to the regulator, in circumstances of potential trading disruption on the system?

(d) Whether the relevant market authority (i.e., the regulator or relevant SRO), the outsourcing market, and its auditors, have: access to the books and records of service providers relating to an exchange’s outsourced activities; and the ability to obtain promptly, upon request, other information concerning activities that are relevant to regulatory oversight?

Securities and Commodity Derivatives and Market Participants

4. With respect to securities and commodity derivatives and market participants:

(a) Is the regulator informed of the types of financial products to be traded, and does it approve the rules governing the admission of the securities to trading or listing?

---

333 See Supervisory Framework for Markets, supra, states at p. 7: “Through the authorization process, the regulator retains an important enforcement tool: the ability to prohibit or place restrictions upon operations.” This is implicit in the concept of being “accountable”.

334 Id., pp. 8–9.

335 See Recommendation 2 in Regulatory Issues Raised by the Impact of Technological Changes on Market Integrity and Efficiency, supra, p. 45.
(b) Where applicable, does the regulator, or the market, take product design\textsuperscript{336} and trading conditions into account in order to admit a product for trading?\textsuperscript{337}

(c) Does the regulatory framework provide for fair access\textsuperscript{338} to the exchange, or trading system, through oversight of the related rules for participation?

\textit{Fairness of Order Execution Procedures}

5. With respect to order execution procedures:

(a) Are order routing procedures clearly disclosed to regulators and to market participants, applied fairly, and not inconsistent with relevant securities regulation (e.g., requirements with respect to precedence of client orders and prohibition of front running or trading ahead of customers)?\textsuperscript{339}

(b) Are execution rules disclosed to the regulator and to market participants, and consistently applied to all participants?

(c) Where applicable, does the regulator review the trade matching or execution algorithm of automated trading systems for fairness?\textsuperscript{340}

\textsuperscript{336} Securities may be subject to rules or requirements for admission to public trading. Further, see \textit{The Application of the Tokyo Communiqué to Exchange-Traded Financial Derivatives Contracts}, supra. This report, which in the case of commodity derivatives has been superseded by \textit{Principles for the Regulation and Supervision of Commodity Derivatives Markets}, supra, is not intended to address equity derivatives and its applicability to OTC markets may require additional analysis.

This notwithstanding, in the case of derivatives, “Contract design standards for derivatives markets should be viewed as a complement to an appropriate surveillance system. In general, contract design standards are intended to assure that contracts are not readily susceptible to manipulation, that the delivery and/or settlement mechanism is reliable, and (for derivative products) that the prices of the underlying and the derivative converge at expiration and, as a consequence, can serve a valid risk management function.” See \textit{The Application of the Tokyo Communiqué to Exchange-Traded Financial Derivatives Contracts}, supra, p. 12.

\textsuperscript{337} With respect to exchange-traded physical commodity derivatives markets, the market authority should follow the contract design principles set out in the \textit{Principles for the Regulation and Supervision of Commodity Derivatives Markets}, supra, p. 21. The contract design principles also require that settlement and delivery procedures should reflect the underlying physical market and promote reliable pricing relationships and price convergence, and should be regularly evaluated to ensure that they meet this standard. Settlement and delivery terms should be specified and made available to market participants.

For example, with respect to access to electronic systems for derivative products, do rules ensure that: response time is equivalent for all system participants; all similarly situated system users have an equal ability to connect and to maintain the connection to the system; all equivalent “inputs” (e.g., volume and order type) by system users are treated fairly and equally; and access by links or interfaces with other systems (e.g., clearing systems, order routing systems, quotation vendors) are equitable? See also the discussion of Principle 3 in \textit{Screen-Based Trading Systems for Derivative Products}, supra, p. 16. These are illustrative “best practices” developed in the context of regulated trading systems for derivative products and are not intended to limit or define practices for regulated trading systems for other securities products.

\textsuperscript{338} Regulatory issues may depend on whether orders are transmitted to an organized regulated market or to other regulated trade execution and matching systems. See also the discussion in paras. 67–73 of \textit{Report on Issues in the Regulation of Cross-Border Proprietary Screen-Based Trading Systems}, supra.

\textsuperscript{339} See \textit{Screen-Based Trading Systems for Derivative Products}, supra.
PRINCIPLES RELATING TO SECONDARY AND OTHER MARKETS

(d) Do all system users have equal opportunity to connect, and maintain the connection to, the electronic trading system, and are differences in order execution response times disclosed by the system operator?

(e) Are there in place effective systems and controls reasonably designed to enable the management of risk with regard to fair and orderly trading including, in particular, automated pre-trade controls that enable intermediaries to implement appropriate risk limits?

Operational Information

6. With respect to trading information:

(a) Do similarly situated market participants have equitable access to market rules and operating procedures?  

(b) Are adequate records (i.e., audit trails) available to reconstruct trading activity within a reasonable time?

(c) Is the system capable of disclosing the types of information that it is designed to make available, and, conversely, of providing safeguards to preserve the confidentiality of other information, the disclosure of which is not intended?

(d) Does the market provide member intermediaries with access to relevant pre- and post-trade information (on a real-time basis) to enable these intermediaries to implement appropriate monitoring and risk management controls?

Explanatory Notes

Not all of the regulatory objectives set out above would apply to ATSs, MTFs or proprietary trading systems in the same way. For example, some jurisdictions use a combination of intermediary and market regulation for trading systems. In addition, in some jurisdictions, only exchanges may have rules relating to disciplining members or participants. However, trading systems should have mechanisms for ensuring compliance with, at a minimum, securities legislation.

The assessor should understand the regulatory structure used by the jurisdiction and apply the appropriate Benchmarks. For example, when combinations of regulatory programs are used, some trading systems may be regulated under Principles for Market Intermediaries, subject to adequate transparency arrangements and market abuse prohibitions and surveillance. This observation also applies to Principles 34 and 35.

---

341 Additionally, for exchange-traded physical commodity derivatives markets: Is information concerning a physical commodity derivative’s contract’s terms and conditions, as well as other relevant information concerning delivery and pricing, readily available to market authorities with respect to all derivatives transactions within its jurisdiction and to market participants in organized derivatives? See the contract design principle on transparency, which sets out the terms and conditions that market rules should specify in Principles for the Regulation and Supervision of Commodity Derivatives Markets, supra, pp. 24–25.

342 See the discussion of Principle 2 in Screen-Based Trading Systems for Derivative Products, supra, p. 13.

343 The extent to which a jurisdiction regulates these types of trading systems will vary. Not all jurisdictions authorize or otherwise regulate ATSs or proprietary trading systems.
The availability of trading information, particularly when combined with the speed of electronic trading technology and the increased linkages among markets, both within the market’s jurisdiction and in other jurisdictions where traders or information providers have access to the market, can exacerbate the market consequences of transactions that are executed in error. A regulator’s assessment into the reliability of all arrangements made by the operator for the monitoring, surveillance and supervision of an exchange, or trading system, should include, among other things, a consideration of the need of an exchange, or a trading system, for adopting error trade policies.344

More broadly, a regulator’s review of an exchange, or a trading system, should inquire into any linkages or inter-connections with other trading venues, both domestic and outside the jurisdiction.345

A regulator may recognize an exchange, or trading system, established in another jurisdiction based on the equivalence, or comparability, of the regulation applicable to the market in its domestic jurisdiction consistent with these Principles. In cases of multiple markets, the assessor will be required to form a judgment about the criteria applied by the regulator having due regard to the volume of trading and turnover, and the related importance of the market.

Key Questions 4(b) and 6(a) reference the contract design principles set out in the IOSCO report on Principles for the Regulation and Supervision of Commodity Derivatives Markets. A key objective of the contract design principles is to eliminate, to the extent possible, the susceptibility of the derivatives contract to price manipulation or distortion.

To be an effective economic tool for hedging and price discovery, physical commodity derivatives contracts must accurately reflect the characteristics and operation of the referenced underlying physical commodity market to the extent possible, and minimize factors which may inhibit or bias the delivery process. Where contract terms are not consistent with commercial practices or the delivery process is biased in favor of either participant, the contract may not be commercially successful or it may be susceptible to market abuses or manipulation and

PRINCIPLES RELATING TO SECONDARY AND OTHER MARKETS

contribute to price distortion and disorderly markets. A non-robust contract design may lead
to a lack of price convergence between a commodity futures contract and the referenced
underlying physical commodity at the expiration of the contract. As a result, the contract is of
less use as a hedging tool and could even multiply risk by doubling positions, rather than
offsetting them.346

Assessors should consider a Principle to be Not Applicable whenever it does not apply given
the nature of the securities market in the given jurisdiction (where there is no operating
exchange or trading system, established, or operating, within the jurisdiction), and relevant
structural, legal, and institutional considerations. In such a case, the reason for the
determination should be documented.

Benchmarks

Fully Implemented

Requires affirmative responses to all applicable Questions.

Broadly Implemented

Requires affirmative responses to all applicable Questions except to Question 3(b) in
so far as it pertains to dispute resolution or applicable appellate procedures, and to
Questions 4(b) and 5(c).

Partly Implemented

Requires affirmative responses to all applicable Questions except to Questions 4(b),
5(c), 5(d) and 6(b) and Question 3(b) as otherwise permitted under Broadly
Implemented.

Not Implemented

Inability to respond affirmatively to one or more of Questions 1, 2(a), 2(b), 2(c), 2(d),
3(a), 3(b) subject to the departures set forth in Broadly Implemented above, 3(c), 4(a),
4(c), 5(a), 5(b), 5(e), 6(a), 6(c) or 6(d).

Principle 34  There should be ongoing regulatory supervision of exchanges and trading systems which should aim to ensure that the integrity of trading is maintained through fair and equitable rules that strike an appropriate balance between the demands of different market participants.

Orderly smooth functioning markets promote investor confidence. Accordingly, there should be ongoing supervision of the markets.347

Key Issues
1. The regulator must remain satisfied that the conditions thought to be necessary pre-requisites of authorization remain in place during operation.
2. Amendments to the rules or requirements of the authorized exchange or regulated trading system should be provided to, or approved by, the regulator.
3. Authorization of the authorized exchange or regulated trading system should be re-examined, or withdrawn, when it is determined that the system is unable to comply with the conditions of its authorization, or with securities law or regulation.

Key Questions
1. Does the regulatory system:
   (a) Include a program whereby the regulator or an SRO, which is subject to oversight by the regulator:
       (i) monitors day-to-day trading activity on the exchange or trading system (through a market surveillance program);
       (ii) monitors conduct of market intermediaries (through examinations of business operations); and
       (iii) collects and analyzes the information gathered through these activities?348
   (b) Include regulatory oversight mechanisms to verify compliance by the exchange, or trading system, with its statutory or administrative responsibilities, particularly as they relate to the integrity of the markets, market surveillance, the monitoring of risks and the ability to respond to such risks?349
   (c) Provide the regulator with adequate access to all pre-trade and post-trade information available to market participants?

348  See Id, p. 9.
349 Such information can be provided through formal mechanisms, such as written reports and inspections, or through informal mechanisms such as regular meetings: see Supervisory Framework for Markets, supra, p. 9.
2. Does the regulatory framework require that amendments to the rules or requirements of the exchange, or trading system, must be provided to, or approved by, the regulator?

3. When the regulator determines that the exchange, or trading system, is unable to comply with the conditions of its approval, or with securities law or regulation, is there a mechanism that permits the regulator\textsuperscript{350} to:

(a) Re-examine the exchange, or trading system, and impose a range of actions, such as restrictions or conditions on the market operator?

(b) Withdraw the exchange, or trading system, authorization?

**Explanatory Notes**

These issues and questions apply to both exchanges and trading systems; however, they may apply in different ways. For example, an exchange may also act as an SRO and therefore have regulatory responsibilities; a trading system may not act as an SRO. Consequently, the rules or requirements for an exchange will have broader scope — such as issuer and participant regulation. Trading systems requirements may outline the market structure of the trading system, how orders are entered, interact and are executed. They will not have the same regulatory impact as exchange rules.

Question 3(a) gives more content to the phrase “re-examine the market’s authorization.” “Since licence revocation is such a serious disciplinary action, in many cases, market operators will not believe it would ever be used and therefore it may not be an effective deterrent. The regulator also should have the clear power to impose an escalating range of disciplinary actions, such as conditions or restrictions on the market operator. While imposition of these restrictions should be subject to some procedural fairness conditions, the process must not be so slow, or cumbersome, so as to prevent regulators acting swiftly and effectively when required.”\textsuperscript{351} If not, the regulator should be invited to discuss how revocation power can be used to buttress its ability to use moral suasion to achieve corrective action.

If the regulator does not have authority to withdraw the exchange, or trading system, authorization because the authorization was not subject to approval by the regulator (e.g., the exchange was “grandfathered in”), it may be possible to adjust the rating to take account of this fact. In such circumstances, where a negative answer to Question 3(b) is the only reason for a *Not Implemented* rating, it would be permissible for an assessor to conclude that Question 3(b) is answered affirmatively and a *Partly Implemented* rating is warranted, if the regulator demonstrates it has authority to suspend all trading on the exchange or trading system for a period of at least six months.

Alternatively, a *Partly Implemented* rating may be justified if the regulator can answer affirmatively to Question 3(a), and the regulator demonstrates that the range of available sanctions and restrictions include the ability to revoke the authority of the market operator, or change the management of the exchange, or trading system.

\textsuperscript{350} Id.
\textsuperscript{351} Id, p. 7.
Benchmarks

Fully Implemented

Requires affirmative responses to all applicable Questions.

Broadly Implemented

Requires affirmative responses to all applicable Questions except to Question 3(a).

Partly Implemented

Requires affirmative responses to all applicable Questions except to Questions 2 and 3(a).

Not Implemented

Inability to respond affirmatively to one or more of Questions 1(a), 1(b), 1(c) or 3(b).
Principle 35 Regulation should promote transparency of trading.

Transparency may be defined as the degree to which information about trading (both for pre-trade and post-trade information) is made publicly available. The degree of transparency of a market can be measured as a deviation from a real-time standard. Pre-trade information concerns the posting of firm bids and offers, in both quote and order-driven markets, as a means to enable intermediaries and investors (“market participants”) to know, with some degree of certainty, whether, and at what prices, they can deal. Post-trade information is related to the prices and volume of all individual transactions actually concluded.

Market transparency is generally regarded as central to both the fairness and efficiency of a market, and in particular to its liquidity and quality of price-formation.

Pre-trade and post-trade transparency enhances fairness and investor protection by making it easier for investors to monitor the quality of executions that they receive from their intermediaries. Transparency can also help to promote market efficiency. Inefficiencies in the pricing of securities and wider bid-offer spreads can occur when market participants are unaware of others’ trading activity. This is particularly the case in dealer-dominated markets where pre-trade quotation information, if it can be obtained at all, can be obtained only from a small number of dealers, thus leaving buy-side clients at an informational disadvantage. Post-trade transparency can reduce information asymmetries between dealers and buy-side clients. If trade prices are publicly known, buy-side market participants will be more likely to question if they are not obtaining prices similar to those at which executions have occurred in the past.

The wide availability of information on bids and offers is a central factor in ensuring price discovery and in strengthening users’ confidence that they will be able to trade at fair prices. This confidence should in turn, increase the incentive of buyers and sellers to participate; facilitate liquidity; and stimulate competitive pricing.

Information in respect of the volumes and prices of completed trades enables market participants not only to take into account the most recent information on volumes and prices but also to monitor the quality of executions they have obtained compared with other market users.

In general, the more complete and more widely available trading information is, the more efficient the price discovery process should be, and the greater the public’s confidence in its fairness.

Establishing market transparency standards is not straightforward, as the interest of individual market participants in transparency levels varies. Regulators may not require pre-trade transparency for certain types of market structures (e.g. call markets, reference-pricing venues) or certain types of orders (e.g. large orders of institutional investors that do not wish such orders to be displayed), taking into account the impact on price discovery, fragmentation, fairness and overall market quality considering in particular the relative overall proportion of dark trading compared to lit trading. Regulators need to assess the appropriate level of transparency of

---

352 See Principles for Dark Liquidity, supra, p. 27.
any particular market structure with considerable care.\textsuperscript{353} IOSCO has encouraged each member jurisdiction to take steps toward enhancing post-trade transparency in the credit default swaps market.

**Key Issues**

1. Ensuring timely access to information is key to the regulation of trading in secondary and other markets. Timely access to relevant information about trading in secondary and other markets allows market participants to assess the terms on which they can trade, and the quality of the execution that they receive, and thereby to look after their own interests, and also reduces the potential for manipulative, or other unfair trading practices.\textsuperscript{354}

2. Where a market authority permits some derogation from the objective of real-time transparency, either pre-trade or post-trade, the conditions should be clearly defined and the market authority (being either, or both, the exchange operator and the regulator) should have access to the complete information to be able to assess the need for derogation and, if necessary, to prescribe alternatives.\textsuperscript{355}

3. Transparent orders should have priority over dark orders at the same price within the same trading venue.

4. Information on completed transactions should be provided on an equitable basis to all market participants including those transactions executed in dark pools, or as a result of dark orders entered into a transparent market.\textsuperscript{356}

5. Regulators should periodically monitor the development of dark pools and dark orders in their jurisdictions to seek to ensure that such developments do not adversely affect the efficiency of the price formation process, and take appropriate action as needed.

\textsuperscript{355} See e.g. *Transparency of Structured Finance Products*, supra, p. 25, for a list of non-prescriptive factors that regulators may wish to consider in developing a post-trade transparency regime for structured financial products.

\textsuperscript{356} Principle 33 requires that participants have sufficient information so that they are able to understand the manner in which their orders are handled and executed: see Key Issue 10 and Key Question 5.
Key Questions

1. Does the regulatory framework include:
   (a) Requirements or arrangements for providing pre-trade (e.g., posting of orders\textsuperscript{357}) information to market participants?
   (b) Requirements or arrangements for providing post-trade information (e.g., last sale price and volume of transaction) to market participants on a timely basis?\textsuperscript{358}
   (c) Requirements or arrangements that information on completed transactions be provided on an equitable basis to all market participants?

2. Where derogation from the objective of real-time transparency is permitted:
   (a) Are the conditions clearly defined?
   (b) Does the market authority (being either, or both, the exchange operator and the regulator) have access to the complete information to be able to assess the need for derogation and, if necessary, to prescribe alternatives?
   (c) Does the regulator have access to adequate information to monitor the development of dark trading and dark orders?
   (d) Do transparent orders have priority over dark orders?
   (e) Do dark pools, and transparent markets that offer dark orders, provide market participants with sufficient information so that they are able to understand the manner in which their orders are handled and executed?

Explanatory Notes

Market transparency is generally regarded as central to both the fairness and efficiency of a market, and in particular to its liquidity and quality of price formation.\textsuperscript{359} For example, as stated in IOSCO’s report \textit{Principles for Dark Liquidity}, the price and volume of firm orders and information regarding trades should generally be transparent to the public. Regulators should support the use of transparent orders, which should have priority over any dark orders at the same price within a trading venue. Regulators should be able to access information regarding dark orders. Market participants should have sufficient information so that they are able to understand the manner in which their dark orders are handled and executed. Regulators should periodically monitor the development of dark pools and dark orders in their jurisdictions.

As noted above, the degree of transparency of a market can be measured as a deviation from a real-time standard. However, there is no single standard of “timeliness.” Most exchanges and regulatory systems provide for a certain degree of deviation from a real-time standard, such as:

\textsuperscript{357} Orders do not include non-binding offers.
\textsuperscript{358} See \textit{Post-Trade Transparency in the Credit Default Swaps Market}, Final Report, Report of the Board of IOSCO, August 2015, pp. 1 and 36, available at http://www.iosco.org/library/pubdocs/pdf/IOSCOPD499.pdf, which contains a recommendation to encourage member jurisdictions to take steps toward enhancing post-trade transparency in the credit default swaps market. This could involve providing information on individual transactions in the CDS market.
\textsuperscript{359} See \textit{Transparency and Market Fragmentation}, supra, p. 3.
permitting some degree of opaqueness of quote information for block transactions; adopting different definitions of “real-time”; adopting a “promptness” standard that varies from several minutes to a longer time; allowing exceptions to real-time based on the size of the trade, type of trade (dealer mediated rather than auction market), or type of dealer and market model. Indeed, each type of market microstructure delivers market fairness, efficiency and transparency in slightly different ways.

Any derogation to the general requirements relating to post-trade transparency should be explained. Reasonable derogations should not prompt the assignment of the jurisdiction to a lower rating but should be documented. For markets whose participants are largely institutional investors, different transparency standards may be appropriate for the execution of large orders that expose intermediaries to risk and could affect the integrity of the price formation process, liquidity, or the orderly conduct of the market.

In all cases, the market authority (being either, or both, the exchange operator and the regulator) should, in any such event, have access to the complete information to be able to assess the need for derogation and, if necessary, to prescribe alternatives. Under any circumstance, the market’s regulator should, in carrying out its supervisory role, be aware of the market’s transparency decisions. In addition, it is important that regulators monitor the development of dark pools to ensure that they do not adversely impact on the price discovery process of transparent markets. Where regulators are concerned that the development of dark trading may adversely impact the price discovery process they should take appropriate action to address such a distortion.

In practice, except for wholesale and certain over-the-counter transaction venues, most markets seek to have post-trade price reporting and publication as close as possible to real-time. Assessments are focused on regulated/organized markets, but any assessment must consider the prevailing structure of markets within the jurisdiction when addressing transparency.

In the end, the final approach to transparency — and the degree of timeliness — is a policy decision, taken at the level of each individual jurisdiction, on how to weigh the conflicting interests of the different market players (small investors, institutions, intermediaries and exchanges). The regulator should provide information, as to the basis for these decisions, and as to how they meet the objectives stated in the Key Issues.

360 Where derogations are permitted, regulators may have policies aimed at mitigating any adverse effects, generally by post-trade transparency requirements and by imposing limitations on the way in which dark trading, or the execution of dark orders, may take place. This may be achieved through, for example:
(a) ensuring transparent orders receive execution priority over dark orders at the same price within a trading venue;
(b) ensuring dark pools provide price improvement over the National Best Bid/Offer (NBBO) to small orders;
(c) ensuring limited scope for waivers to pre-trade transparency;
(d) referencing prices within the dark pools to those of the national securities exchange; and
(e) trade through protection.
Principles for Dark Liquidity, supra, pp. 20–21.

Benchmarks

Fully Implemented

Requires affirmative responses to all applicable Questions.

Broadly Implemented

Requires affirmative responses to all applicable Questions except to Question 2(c) and/or to Question 1(a), in a primarily institutional trading market.

Partly Implemented

Requires affirmative responses to all applicable Questions except to Questions 1(a), 2(c), 2(d) and 2(e) as specified above and Questions 1(b) and 1(c) post-trade information is not available on an equitable basis to all participants in an institutional market.

Not Implemented

Inability to respond affirmatively to one or more of Questions 1(a), 1(b), 1(c), 2(a), 2(b) if applicable, subject to the departures permitted above, or post-trade information on concluded transactions is not available either on a timely or on an equitable basis in a market accessible to retail investors.
**Principle 36 Regulation should be designed to detect and deter manipulation and other unfair trading practices**

Market manipulation (or attempts at manipulation), misleading conduct, insider trading and other fraudulent or deceptive conduct, may distort the price discovery system, distort prices and unfairly disadvantage investors.\(^{362}\)

Such conduct could be addressed through a number of mechanisms, which, might include: direct surveillance; inspection; reporting; product design requirements; position limits settlement price rules; or market halts, complemented by vigorous enforcement of the law and trading rules.

An effective market oversight program should have a mechanism for monitoring compliance with the securities laws, regulations and market rules, operational competence requirements, and market standards.

The regulator must ensure that there are in place arrangements for the continuous monitoring of trading. These arrangements should trigger inquiry whenever unusual and potentially improper trading occurs.

Particular care must be taken to ensure that regulation is sufficient to cover cross-market conduct, for example, conduct in which the price of an equity product is manipulated in order to benefit through the trading of options, warrants or other derivative products, or where there are multiple markets trading the same product.

Regulators should continue to assess the impact of technological developments and market structure changes on market integrity and efficiency, including algorithmic and high frequency trading. Based on this, regulators should seek to ensure that suitable measures are taken to mitigate any related risks to market integrity and efficiency, including any risks to price formation or to the resiliency and stability of markets, to which such developments give rise.\(^{363}\)

**Key Issues**

1. The regulation of trading in secondary and other markets should prohibit: market manipulation (or attempts at manipulation); misleading conduct; insider trading; and other fraudulent or deceptive conduct, and apply adequate, proportionate, and dissuasive sanctions.\(^ {364}\)

---

\(^{363}\) See Recommendation 4 in *Regulatory Issues Raised by the Impact of Technological Changes on Market Integrity and Efficiency*, supra, p. 47.

2. The regulator should ensure that there are in place arrangements for the continuous monitoring of trading. These arrangements should trigger inquiry whenever unusual and potentially improper trading occurs. Market authorities should have rules, compliance programs, sanctioning policies and powers to prohibit, detect, prevent and deter abusive practices on their markets, including manipulation (or attempts at manipulation) of the market.365

3. Regulation should cover cross-market conduct where, for example, the price of an equity product could be manipulated through the trading of options, warrants or OTC derivatives or other derivative products. The regulator should also work collectively and take any steps that would be appropriate to strengthen its cross-border surveillance capabilities.366

4. There must be adequate information sharing between relevant regulatory authorities, sufficient to ensure effective enforcement.367

5. Authorities responsible for the supervision of commodity derivatives markets (e.g., either the market, a governmental regulator or an SRO) should have the authority to access information on a routine and non-routine basis that permits them to reconstruct transactions, identify large concentrations of positions, and the overall composition of the market, including the power to access on an “as needed basis” information on the size and beneficial ownership of a trader’s related financial and underlying market positions in order to aggregate positions held under common ownership and control.368

Key Questions

1. Does the regulatory system prohibit the following with respect to products admitted to trading on authorized exchanges and regulated trading systems:
   (a) Market or price manipulation (or attempts at market or price manipulation)?
   (b) Misleading information?
   (c) Insider trading?
   (d) Front running?
   (e) Other fraudulent or deceptive conduct and market abuses?369

---

369 See Principles for the Regulation and Supervision of Commodity Derivatives Markets, supra, pp. 47–48 for an enumerated list of practices that market authorities should seek to detect and prevent.
2. Does the regulatory approach to detect and deter such conduct include an effective and appropriate combination of mechanisms drawn from the following:
   (a) Direct surveillance, inspection, reporting, such as, for example:
       (i) securities listing, or product design requirements (where applicable);
       (ii) position limits;
       (iii) audit trail requirements;
       (iv) quotation display rules;
       (v) order handling rules;
       (vi) settlement price rules;
       (vii) market halts, complemented by enforcement of the law and trading rules; or
       (viii) power to obtain information on a market participant’s positions in related OTC commodity derivatives and the underlying physical commodity markets.\(^\text{370}\)
   (b) Effective, proportionate and dissuasive sanctions for violations?\(^\text{371}\) In the case of exchange-traded commodity derivatives markets, does the relevant market authority have and use effective sanctioning powers to discipline its members or other authorized market participants and does it have powers to take action against non-members of the market or other market participants?\(^\text{372}\)

3. Are there arrangements in place for:
   (a) The continuous collection and analysis of information concerning trading activities?
   (b) Providing the results of such analysis to market and regulatory officials in a position to take remedial action if necessary?
   (c) Monitoring the conduct of market intermediaries participating in the market(s)?
   (d) Triggering further inquiry as to suspicious transactions or patterns of trading?

4. If there is potential for domestic cross-market trading, are there:
   (a) inspection;
   (b) assistance; and
   (c) information-sharing, requirements or arrangements in place to monitor and/or address domestic cross-market trading abuses?\(^\text{373}\)

---

\(^{370}\) See Id, p. 32.

\(^{371}\) Compare to requirements under Principles 10, 11 and 12.

\(^{372}\) See the discussion in *Principles for the Regulation and Supervision of Commodity Derivatives Markets*, supra, pp. 52–53, regarding disciplinary sanctions against market members and disciplinary sanctions against non-members of the market in the IOSCO.

\(^{373}\) In the case of exchange-traded physical commodity derivatives markets, the overall framework for market surveillance and enforcement within a jurisdiction should be structured to provide for active and coordinated detection and enforcement action against manipulative or abusive schemes that might affect trading on multiple exchange and OTC markets, as well as the underlying physical commodity markets. See Id, p. 49.
5. If there are foreign linkages, substantial foreign participation, or cross listings, are there cooperation arrangements with relevant foreign regulators, and/or markets, that address manipulation, or other abusive trading practices?  

6. Regarding market authorities responsible for the supervision of commodity derivatives markets only:

   (a) Does the market authority have authority to access information on a routine and non-routine basis for regulated commodity derivatives markets as well as the power to obtain information on a market participant’s positions in related OTC commodity derivatives and the underlying physical commodity markets?  

   (b) Does the market authority collect information on a routine and regular basis on relevant on-exchange commodity derivatives transactions and does it have the capability to aggregate position holder information promptly in order to identify positions under common ownership and control? Reference should be made to the commodity derivatives principles for the type of information required.  

   (c) In respect of OTC commodity derivatives transactions and positions, has the market authority considered what information it should collect on a routine basis and what it should collect on an “as needed” basis.  

7. Does the market authority have the organizational and technical capabilities to monitor effectively the trading venues it supervises, including the ability to identify market abuse and activities that may impact the fairness and orderliness of trading on such venues?  

Explanatory Notes

An effective and credible market oversight program should include robust powers over fraud, market manipulation or attempts at such manipulation. These powers might be general in their application or they might relate more specifically to a particular topic of manipulation or attempted manipulation. For example, it might include manipulation or attempts at manipulation of a benchmark referenced in a financial contract or financial instrument.

---

374 In the case of exchange-traded physical commodity derivatives markets, market authorities should have arrangements that allow them to share information on large exposures in linked markets and on supplies relative to these markets. Information sharing to facilitate heightened surveillance is warranted where physical commodity derivatives contracts trade on different exchanges and are linked economically, such as where one contract’s settlement price is determined by reference to the settlement price of the other contract: Principles for the Regulation and Supervision of Commodity Derivatives Markets, supra, p. 69.

375 See Id, p. 32.

376 See Id, p. 33 for the specific types of on-exchange information that should be collected.

377 A market authority that has access to a relevant Trade Repository’s (TR’s) data should take such broader access into account, as well as its statutory obligations with respect to the TR, in constructing its data collection policies. IOSCO has stated that, in connection with commodity derivatives markets, IOSCO members should promote the reporting of OTC derivatives contracts to TRs: Id, pp. 33 and 60, respectively.

378 Technological Challenges to Effective Market Surveillance: Issues and Regulatory Tools, supra, p. 32.
Essential elements of monitoring compliance include:

1. monitoring the day-to-day trading activity in the markets (through a market surveillance program);

2. monitoring the conduct of market intermediaries (through examinations of business operations); and

3. collecting and analyzing information gathered from these activities. Techniques may differ for securities and derivatives markets. The regulator should be invited to explain how its approach operates to detect, deter, and sanction misconduct.

For commodity derivatives markets, market authorities should develop, employ and maintain methods for monitoring of trading activity on the markets they supervise, collecting needed information and analyzing the information they collect that are efficient and suitable for the type of market being supervised. Effective monitoring of orders and electronic transactions requires real-time monitoring capabilities, supported by automated systems that detect trading anomalies. Monitoring, collection and analysis should also focus on intra-day trading.

In respect to on-exchange commodity derivatives transactions, a market authority should collect information on a routine and regular basis on the matters set out in the commodity derivatives principles.

The overall framework for market surveillance and enforcement within a jurisdiction should be structured to provide for active and coordinated detection and enforcement action against manipulative or abusive schemes that might affect trading on multiple markets, including organized trading facilities and swaps execution facilities and OTC markets, as well as the underlying physical commodity markets.

The following are examples of some cases when cross-market surveillance information is relevant: when the underlying instrument is traded in a jurisdiction other than the one where a derivative instrument is traded, or where identical financial products are traded in two jurisdictions, there may be increased potential for fraud or manipulation because of the difficulty of a regulator in one jurisdiction to monitor market activity directly or to conduct complete investigations of market activities in another jurisdiction. It is also relevant if the product is traded on multiple markets.

The regulator can make use of an exchange or trading system surveillance system provided that the regulator has reviewed it under Principle 34 above.

Market authorities should have authority to seek access to information in foreign jurisdictions. Market authorities should at a minimum map and be aware of the extent of any gaps in their cross-border surveillance capabilities.

---

380 For physical delivery contracts, the credible possibility of delivery is critical for the contract to serve as an effective economic tool for hedging and price discovery. It is important for market authorities to have the ability to ascertain a market participant’s delivery intentions with regard to an exchange-traded contract as well as to understand the effect of such physical market transactions on price formation in the physical market. While the principle does not require market authorities to impose mandatory reporting requirements, market authorities should have the ability to reconstruct the entire trading record of a market participant to conduct an effective investigation for market manipulation.
383 See Technological Challenges to Effective Market Surveillance: Issues and Regulatory Tools, supra, p.37
Market authorities should monitor for novel forms or variations of market abuse that may arise as a result of technological developments and take action as necessary. They should also review their arrangements (including cross-border information sharing arrangements) and capabilities for the continuous monitoring of trading (including transactions, orders entered or orders cancelled) to help ensure that they remain effective.384

The unique information needs of commodity derivatives markets mean that the market authority should have the power to:385

1. access information that allows the reconstruction of all transactions on a regulated commodity derivatives market (audit trail);
2. access information that permits them to identify large positions (i.e., “large exposures” or “concentrations”) and the composition of the market in question;
3. access information, if needed, on the size and beneficial ownership of positions held by a market participant in order to aggregate positions held under common ownership and control;
4. access information about a market participant’s transactions and positions in related OTC and physical commodity markets; and
5. take appropriate action where a commodity derivatives market participant does not make requested market information available to the market authority.

The trading of physical commodity derivatives differs fundamentally from the trading of financial-based derivatives in that the actual supply of the underlying physical commodity is restricted to a finite supply. Commodity derivatives contracts that require the delivery of a physical commodity are most susceptible to manipulation when the deliverable supply on such contracts is small relative to the size of positions held by traders, individually or in related groups, as the contract approaches expiration. Because of this concern, surveillance programs need to identify the build-up of large position concentrations, particularly during the settlement month.386

For physical commodity derivatives markets, information is a critical tool for maintaining fair and orderly markets and ensuring market integrity. Information about transactions permits a market authority to detect customer and market abuses. Information about futures, and related OTC and physical market positions, as appropriate, allows market authorities to identify large positions which could potentially result in a disorderly market or relate to market abuse, evaluate the overall composition of the market and to assess its functioning. See the IOSCO Principles for the Regulation and Supervision of Commodity Derivatives Markets for the specific types of on-exchange information that should be collected.387

---

384 See Recommendation 5 in Regulatory Issues Raised by the Impact of Technological Changes on Market Integrity and Efficiency, supra, p.48.
386 Id, p. 26.
387 Id, p. 33.
Obtaining this information is particularly critical during periods of significant and abrupt price movements (e.g., high price volatility) in order to determine whether a market is functioning properly. Position information also enables market authorities to understand the composition of the market and to analyze the participation of various classes of traders such as commercial and non-commercial market participants.  

Equity derivatives raise additional issues that were not addressed by the Tokyo Communiqué and assessment must take into account the unique attributes of the market and product in question.

**Benchmarks**

*Fully Implemented*

Requires affirmative responses to all applicable Questions.

*Broadly Implemented*

Requires affirmative responses to all applicable Questions except to Questions 4 and 5, provided that there is not substantial cross-border or cross-market activity and cooperation in fact occurs.

*Partly Implemented*

Requires affirmative responses to all applicable Questions except that if Questions 4 and 5 are applicable, there is evidence of cross-market and cross-border cooperation and information sharing, although no formal arrangements for cooperation may be in place.

*Not Implemented*

Inability to respond affirmatively to one or more of Questions 1(a), 1(b), 1(c), 1(d), 1(e), 2(a), 2(b), 3(a), 3(b), 3(c), 3(d) or 6 (if applicable), or 7 or if Questions 4 or 5 are applicable, there is no evidence of cross-border cooperation whether or not there are formal arrangements for cooperation in place.

---

388  Id, p. 34.
Principle 37 Regulation should aim to ensure the proper management of large exposures, default risk and market disruption

Risk taking is essential to an active market and regulation should not unnecessarily stifle legitimate risk taking. Rather, regulators should promote and allow for the effective management of risk, also with a view to fostering market resilience and stability, and ensure that capital and other prudential requirements: are sufficient to address appropriate risk taking; allow the absorption of some losses; and check excessive risk taking. An efficient and properly structured clearing and settlement process that is supervised and uses effective risk management tools is essential. The legal system also must support effective and legally secure arrangements for default handling. This is a matter that extends beyond securities law to the insolvency provisions of a jurisdiction. Insolvency law must support isolating risk, and retaining and applying margin previously paid into the system, notwithstanding a default, or commencement of an administration or bankruptcy proceeding.

Instability may result from events that occur in another jurisdiction or occur across several jurisdictions, so regulators’ responses to market disruptions should seek to facilitate stability domestically and globally through cooperation and information sharing.

This section also addresses concerns with regard to risks related to short selling practices in equity markets and risks related to commodity derivatives markets, as well as transactions in OTC derivatives.

Key Issues

Monitoring of Large Exposures

1. Market authorities should have mechanisms to monitor open positions, or credit exposures, on unsettled trades that are sufficiently large to pose a risk to the market or to a clearing firm (i.e., large exposures) and for this purpose:

   (a) Establish trigger levels appropriate to their markets and continuously monitor the size of positions on their markets.

---

390 See Principle 38.
391 The term “market authority” is used, for purposes of large exposures, to refer to the authority in a jurisdiction that has statutory or regulatory powers with respect to the exercise of certain regulatory functions over a market. The relevant market authority, depending on the jurisdiction, may be a regulatory body, an SRO, and/or the market itself. Report on Cooperation between Market Authorities and Default Procedures, supra, p. 2.
392 The expression “large exposure” refers to an open position that is sufficiently large to pose a risk to the market or a clearing firm. For these purposes large exposures may be construed to be open unsettled positions; open short positions, margined positions, options and other derivatives.
393 The assessor should request empirical evidence of an evaluative procedure before concluding that there is effective ongoing monitoring. See also Report on Cooperation between Market Authorities and Default Procedures, supra, p. 3 par. 6; Principles for the Regulation and Supervision of Commodity Derivatives Markets, supra, p. 36.
physical commodity derivatives markets, market authorities should (i) require the reporting of large trader positions for the relevant on-exchange commodity derivatives contracts and (ii) publish the aggregate exposures of different classes of large traders, especially commercial and non-commercial participants, within the bounds of maintaining trader confidence.394

(b) Have access to information, if needed, on the size and beneficial ownership of positions held by direct customers of market intermediaries’ members.395

(c) Have authority to take appropriate action where a direct market participant does not make requested market information available to the market authority.

(d) Have the power to take appropriate action, such as requiring the market participant to reduce exposures, increase margin, or deposit additional collateral.

(e) Promote mechanisms that facilitate the sharing of information on large exposures through appropriate channels.

Default Procedures — Transparency and Effectiveness

2. Market authorities should make relevant information concerning market default procedures available to market participants.

3. Regulators should ensure that the procedures relating to defaults, and permitted corrective actions, are effective and transparent.

4. Market authorities for related products (cash or derivative) should consult with each other, as soon as practicable, with a view to minimizing the adverse effects of market disruptions.

Short Selling

5. Short selling should be subject to appropriate controls to reduce or minimize the potential risks that could affect the orderly and efficient functioning and stability of financial markets.

6. Short selling should be subject to a reporting regime that provides timely information to the market, or to market authorities.

7. Short selling should be subject to an effective compliance and enforcement system that is intended to instil settlement discipline and minimize the potential for settlement disruption risk and provides for surveillance of short selling activities.

394 Id, pp. 36 (large positions) and 59 (publication of aggregate positions).

395 A broker’s direct (i.e., immediate) client who signed the account documentation in reality may be operating on behalf of an unknown person who controls the account (the beneficial owner). A market authority must be able to identify such a beneficial owner in order to aggregate positions, for example. See also Id, p. 66.
8. Regulation of short selling should allow appropriate exceptions for certain types of transactions for efficient market functioning and development.

Addressing Risks in the Commodity Derivative Markets

9. Regarding authorities responsible for the supervision of exchange-traded physical commodity derivatives markets (e.g., either the market, a governmental regulator or an SRO):\textsuperscript{396}

(a) Market authorities should have and use formal position management powers, including the power to set \textit{ex-ante} position limits, particularly in the delivery month.

(b) Market authorities should also have the powers to employ additional measures, as appropriate to address market disruption or the perceived threat of such disruption.

Transactions in OTC Derivatives Markets\textsuperscript{397}

10. It is appropriate to trade standardized derivatives contracts with a suitable degree of liquidity on exchanges or electronic trading platforms, provided that a flexible approach encompassing a range of platforms that would qualify as “exchanges or electronic trading platforms” for derivatives trading is taken.

11. Standardized OTC derivatives should be cleared through central counterparties (CCPs). Authorities implementing a mandatory clearing regime should consider using bottom-up and top-down approaches to determine products that are subject to a mandatory clearing obligation.

12. All derivatives transactions which are not cleared by CCPs should be subject to appropriate margining practices. All financial entities and systemically important non-financial entities that deal in non-centrally cleared derivatives should exchange initial and variation margin as appropriate to the counterparty risks posed by such transactions. The determining authority should also be able to consult with foreign authorities so as to minimize inconsistencies among different regulatory standards on non-centrally cleared OTC derivatives.

13. Alongside margin, financial entities and systemically important non-financial entities that deal in non-centrally cleared OTC derivatives should employ risk mitigation techniques, consistent with the standards set out by IOSCO in the report \textit{Risk Mitigation Standards for Non-Centrally Cleared OTC Derivatives}.

\textsuperscript{396} Id, p. 40.

\textsuperscript{397} In 2009, the Leaders of the G-20 committed to ensuring that all standardized OTC derivatives contracts are cleared through central counterparties (CCPs) by end-2012. The Financial Stability Board (FSB) recommended in its \textit{Implementing OTC Derivatives Market Reforms} (FSB Report, October 2010, available at http://www.fsb.org/wp-content/uploads/r_101025.pdf) that IOSCO, working with other authorities as appropriate, should coordinate the application of central clearing requirements on a product and participant level, and any exemptions from them as a means of minimizing the potential for regulatory arbitrage as the G-20 commitments on central clearing are implemented. The Report outlines recommendations that authorities should follow in establishing a mandatory clearing regime within their jurisdiction: \textit{Requirements for Mandatory Clearing}, Report of the Technical Committee of IOSCO, February 2012, available at https://www.iosco.org/library/pubdocs/pdf/IOSCOPD374.pdf.
14. OTC derivatives contracts should be reported to trade repositories (TRs). At a minimum, transaction-level data should be reported to TRs, including at least transaction economics, counterparty information, underlying information, operational data and event data. Authorities that require information on OTC derivatives transactions in order to carry out their respective mandates should have sufficient and timely access to relevant data. Authorities obtaining access to data should have the ability to keep the data confidential.

Key Questions

Monitoring of Large Exposures

1. Does the market authority have a mechanism in place that is intended to monitor and evaluate continuously the risk of open positions, or credit exposures, that are sufficiently large to expose a risk to the market, or to a clearing firm, that includes:

   (a) Qualitative, or quantitative, trigger levels appropriate to the market for the purpose of identifying large exposures (as defined by the market authority), continuous monitoring, and an evaluative process?  

   (b) Access to information, if needed, on the size and beneficial ownership of positions held by direct customers of market intermediaries?

   (c) The power to take appropriate action against a market participant that does not provide relevant information needed to evaluate an exposure (e.g., require liquidation of positions, increase margin requirements and/or revoke trading privileges)?

   (d) The general power to take appropriate action, such as to compel market participants carrying, or controlling, large positions to reduce their exposures or to post increased margin?

2. Do arrangements, whether formal or informal, exist to enable markets and regulators to share information on large exposures of common market participants, or on related products:

   (a) In the domestic jurisdiction?

   (b) In other relevant jurisdictions?

3. With respect to exchange-traded physical commodity derivatives markets, do relevant market authorities (i) require the reporting of large trader positions for the relevant on-exchange commodity derivatives contracts and (ii) publish the aggregate exposures of different classes of large traders, especially commercial and non-commercial participants, within the bounds of maintaining trader confidence?

---

398 See Report on Cooperation between Market Authorities and Default Procedures, supra, p. 3 par. 4.
399 Id, p. 4 par. 8.
400 Id, p. 4 par. 8 regarding the promotion of formal/informal mechanisms. See also Report on Trading Halts and Market Closures, supra, pp. 23–24.
401 See Principles for the Regulation and Supervision of Commodity Derivatives Markets, supra, pp. 36 (large positions) and 59 (publication of aggregate positions).
Default Procedures — Transparency and Effectiveness

4. Does a market authority make its default procedures available to market participants, including, specifically, information concerning:
   (a) The general circumstances in which action may be taken?
   (b) Who may take it?
   (c) The scope of actions which may be taken.\textsuperscript{402}

5. Do default procedures, and/or national law, permit markets, and/or the clearing and settlement system(s), to promptly isolate the problem of a failing firm by addressing its open proprietary positions, and positions it holds on behalf of customers; or otherwise protect customer funds and assets, from an intermediary’s default under national law?

6. Is there a mechanism by which market authorities for related products can consult with each other in order to minimize the adverse effects of market disruptions?

Short Selling on Equity Markets\textsuperscript{403}

7. Does the relevant market authority\textsuperscript{404} provide for:
   (a) Controls which are appropriate to the equity market in question and that have as their goal: to reduce or minimize the potential risks that could affect the orderly and efficient functioning and stability of equity markets including, at a minimum, a strict settlement of failed trades?
   (b) A reporting regime that provides timely short selling information to the market or, as a minimum requirement, to market authorities?
   (c) As part of an effective compliance and enforcement system (assessed under Principle 11): (i) measures that promote settlement discipline, including regular monitoring by the market authority of settlement failures; and (ii) surveillance of short selling activities. Any deficiency here should also be taken into account in the assessment of Principle 11.
   (d) Appropriate exceptions for certain types of transactions for efficient market functioning and development (such as, but not limited to, \textit{bona fide} hedging, market making and arbitrage activities)?

\textsuperscript{402} Id. For a template or list of information that should be available to market participants as to market default procedures regarding futures and options transactions.

\textsuperscript{403} See \textit{Regulation of Short Selling}, Final Report, Report of the Technical Committee of IOSCO, June 2009, available at \url{https://www.iosco.org/library/pubdocs/pdf/IOSCOPD292.pdf}, addresses short selling in equity markets only. For example, the report’s reference to naked short selling, capital markets, and the need for a short settlement cycle illustrate the equity focus of the report.

\textsuperscript{404} Id, p. 4 fn. 2 describes the term “market authority” to include securities regulators, SROs, exchanges and alternative trading facilities. That report further states that “in some jurisdictions, short selling regulation comprises statute-based requirements overseen by securities regulators and rules set by self-regulatory organizations, exchanges or alternative trading systems”. 

252
Addressing Risks in the Commodity Derivatives Markets

8. Regarding authorities responsible for the supervision of exchange-traded physical commodity derivatives markets (e.g., either the market, a governmental regulator or an SRO) (“commodity derivatives market authorities)):

(a) Does the relevant market authority have and use formal position management powers, including the power to set *ex-ante* position limits, particularly in the delivery month? \(^{405}\)

(b) Does the relevant market authority have the powers to employ additional measures, as appropriate to address market disruption or the perceived threat of such disruption?

Transactions in OTC Derivatives Markets

9. Are standardized OTC derivatives contracts with a suitable degree of liquidity required to be traded on “exchanges or electronic trading platforms” provided that a flexible approach encompassing a range of platforms that would qualify as “exchanges or electronic trading platforms” for OTC derivatives is taken?

10. Are the platforms which may qualify as exchanges or electronic trading platforms for mandatory OTC derivatives trading appropriately identified as such?

11. Are standardized OTC derivatives required to be cleared through CCPs? In particular, has the market authority a clear process in place for the determination that a product or set of products should be subject to a mandatory clearing obligation?

12. Is the determining authority able to consult with foreign authorities to minimize inconsistencies among different regulatory standards on non-centrally cleared OTC derivatives?

13. Are all OTC derivatives transactions not cleared by CCPs subject to appropriate margining practices?

14. Are all financial firms and systemically important non-financial entities that engage in non-centrally cleared OTC derivatives required to exchange initial and variation margin as appropriate to the counterparty risks posed by such transactions?

15. Where required by the authority, do financial entities and systemically important non-financial entities that engage in non-centrally cleared OTC derivatives employ risk mitigation techniques consistent with the standards set out by IOSCO in the report *Risk Mitigation Standards for Non-Centrally Cleared OTC Derivatives*?

16. Are OTC derivatives contracts required to be reported to TRs?

17. Are transaction-level data on OTC derivatives required to be reported to TRs, including at least transaction economics, counterparty information, underlier information, operational data and event data?

---

\(^{405}\) See *Principles for the Regulation and Supervision of Commodity Derivatives Markets*, supra, p. 40.
18. Does the market authority have sufficient and timely access to relevant data in order to carry out its respective mandate related to OTC derivatives?

19. Do reporting entities and counterparties have appropriate access to their own data stored with TRs?

**Explanatory Notes**

**“Large Exposure” Monitoring**

Market authorities should closely monitor large exposures and share information with one another in order to permit the appropriate assessment of risk. The approach to large exposure monitoring contained in this Methodology reflects, as noted in the Secondary and Other Markets Methodology Preamble that “regulation may differ according to market structure, market participant or product…”. Accordingly, assessment of the related Key Questions should recognize the different regulatory structures in place and the characteristics of markets.

For example, the Methodology recognizes that the large exposure monitoring function itself may be performed by a regulatory body, an SRO, and/or the market itself (i.e., a “market authority”).

Similarly, in stating that “trigger levels” (which are qualitative, or quantitative, criteria that are used to identify a large exposure) should be established, the Principles and Key Question 1 makes clear that they should be “appropriate” to the markets in question. In this regard, the determination of what constitutes a “large exposure” will be made by the relevant “market authority” acting within its discretion. It therefore follows that not every market will have the same large exposure monitoring needs, trigger levels, or approach to monitoring. These levels will necessarily vary between different markets and contracts, and should be subject to regular review to ensure that they are appropriate for current market conditions.

For example, in physical commodity derivatives markets, the relationship between the size of a position, the trading intention behind it and the owner is of vital importance in the market authority’s decision-making process with regard to a large position. The justification for holding a large position may well rest on the business function of the owner. A commercial market participant with large delivery commitments may well be able to justify a large position in a commodity derivatives contract, but a non-commercial market participant with a similar position may find it more difficult to argue the case.

To perform this monitoring function market authorities should have access to information on the size and beneficial ownership of positions held by “direct” customers of market members (i.e., the customers with whom the market member deals). Market authorities can then take the appropriate action, such as requiring the member to reduce the exposure, or increasing margin requirements.

Market authorities should promote mechanisms that facilitate the sharing of the above information through appropriate channels. Where a market member does not make the relevant information available to the market authority, the authority should be able to take appropriate action — while taking into account the mechanisms already provided by the CCP, such as: imposing limitations on future trading by the member; requiring liquidation of positions; increasing margin requirements; or revoking trading privileges.
The Market and Financial Integrity Objectives of Large Exposure Monitoring

The monitoring program itself should be appropriate not only for the type of market, but also for the monitoring objective – i.e., market integrity or financial integrity. Differences between equity and futures markets must be taken into account.

For example, large exposure monitoring in commodity futures markets for market integrity purposes (i.e., market surveillance for the purpose of detecting possible manipulation or other abusive trading) has been directly addressed by IOSCO. This work makes clear that a “large exposure” monitoring program is necessary with respect to commodity futures markets. IOSCO’s work also noted that, in relation to commodity futures markets, transparency of the aggregate positions of large traders contributes to both price discovery of futures markets as well as providing data that might improve the analysis of any causal relationships between financial and physical market activity.

In contrast, IOSCO reports on the market integrity concerns of equity markets have focused on the relationship between cash (equity) and derivatives markets during periods of market disruption, and stressed the need for market authorities to be able to access information on related positions.

For both equity and derivatives markets, the financial integrity concerns that are related to large credit exposures are dealt with in greater detail in the standards to be applied to securities settlement systems, central securities depositories, trade repositories and to central counterparties; their related assessment methodologies that have been jointly adopted by IOSCO and the Committee on Payment and Settlement Systems (CPSS now the Committee on Payments and Market Infrastructures or CPMI), and may be jointly revised and adopted, from time to time, by IOSCO and the CPSS (now CPMI). Accordingly, in assessing a market authority’s monitoring program that addresses credit exposures, assessment under Principle 38 should be undertaken and viewed as complementary to any separate assessment that may be conducted under the IOSCO-CPSS standards.

Defaults

Effective and Transparent — Regulators should ensure that the procedures relating to defaults are effective and transparent. Market authorities should make relevant information concerning market default procedures available to market participants.

Consultation and Information Sharing — Market authorities for related products (cash or derivative) should consult with each other, as soon as practicable, with a view to minimizing the adverse effects of market disruption. The information that may be needed includes contingency plans, contact persons, and structural measures to address market disruption; and information about market conditions (such as actions taken by market authorities, prices, trading activities and aggregate market data).

Instability may result from events that occur in another jurisdiction or occur across several jurisdictions, so regulators’ responses to market disruptions should seek to facilitate stability domestically and globally through cooperation and information sharing.

---

406 Id, pp. 36–38.
407 Id, pp. 58–59.
408 See Mechanisms to Enhance Open and Timely Communication between Market Authorities of Related Cash and Derivative Markets During Periods of Market Disruption, supra, and Coordination between Cash and Derivative Markets, supra.
Insolvency Law — The legal system must support effective and legally secure arrangements for default handling. This is a matter that extends beyond securities law to the insolvency provisions of a jurisdiction. Insolvency law must support isolating risk, and retaining and applying margin previously paid into the system, notwithstanding a default or commencement of an administration or bankruptcy proceeding.

For example, the following mechanisms can be relevant to addressing a financial failure or market disruption; however, other mechanisms also may be adequate if the objectives of: isolating risk; and protecting funds from being taken to cover the intermediary’s default, are achieved.

- National insolvency laws that specifically accommodate market default procedures.
- Central bank guarantees.
- The use of the defaulting firm’s proprietary funds and assets to meet its obligations to market counterparties.
- The transfer or liquidation of customer positions at the defaulting firm under market rules without interference from bankruptcy law.\(^{409}\)
- The transfer of customer funds and assets, or use of a guarantee system.
- Where customer positions or funds are to be transferred, arrangements for distinguishing firm and customer positions, deposits and accruals.

The regulator should identify any concerns with respect to applicable bankruptcy law.

Assessments of Principle 37 should take account of any vulnerability in risk management identified with respect to Principle 38, and there should be close communication as to any findings under this Principle and the Principle relating to Clearing and Settlement.

Short Selling

Short selling is regarded as a useful mechanism in some jurisdictions to aid liquidity. It plays an important role in the market for a variety of reasons, such as providing more efficient price discovery, as well as potentially mitigating market bubbles and facilitating hedging and other risk management activities. However, there is also a general concern that, especially in extreme market conditions, certain types of short selling, or the use of short selling in combination with certain abusive strategies, may contribute to disorderly markets. When short selling is introduced, an effective regulatory framework should be put in place. The primary objective of such regulation would be to reduce the potential destabilizing effect that short selling, used in an abusive manner, can cause without exerting undue impact on securities lending, hedging and other types of transactions that are critical to capital formation and to reducing volatility (such as those used for risk management purposes). Short selling regulation should allow appropriate exceptions for certain types of transactions for efficient market functioning and development.

---

\(^{409}\) Liquidation is acceptable in cases where the nature of the position makes transfer impracticable, or in cases where a customer may not have completed the documentation necessary for the transfer or the applicable regulation does not allow for transfers. See also Report on Cooperation between Market Authorities and Default Procedures, supra, par. 6(3). The market, however, should not be required to maintain open unsettled transactions once a direct participant has defaulted.
In respect of Key Question 6(c), monitoring and surveillance are components of an effective compliance and enforcement system which can be carried out through the reporting of short positions, and/or flagging of short sales. Market authorities of jurisdictions that have a short sale flagging, and/or short position reporting, regime are encouraged to establish a mechanism to analyze the information obtained through short selling reporting to identify potential market abuses and systemic risk.

Addressing Risks in the Commodity Derivatives Markets

Disorderly conditions in physical commodity derivatives markets can have significant negative effects on national economies. Accordingly, it is critical that market authorities have the necessary powers to intervene in the markets to address disorderly conditions. These should necessarily include position management powers that:

(a) Establish a trader’s automatic consent to follow an order of the market authority when that trader’s position reaches a defined threshold size or any size, which the market authority considers prejudicial to orderly market functioning, taking into account all relevant circumstances. They should also require such a trader to comply with the market authority’s order, either not to increase a position or to decrease a position; and

(b) Authorize a market authority to place ex-ante restrictions on the size of a position a market participant can take in a commodity derivatives contract (i.e., position limits).

In particular, there should be a credible use by market authorities of powers to stabilize markets should disorderly conditions exist, including by ordering market participants to reduce the levels of their positions, if that outcome is deemed necessary by the relevant market authority. The flexibility provided by position management powers to intervene where specific circumstances so require is an effective way of preventing manipulation and disorderly markets arising from large positions (e.g. positions amassed close to the settlement date of physical delivery), especially concerning participants that are not hedging their positions in the physical markets.\(^{410}\)

Further, market authorities should also have the powers to employ any of the following measures, as appropriate, to address market disruption or the perceived threat of such disruption:

(a) the imposition of price movement limits;

(b) calling for additional margin, either from customers or from clearing members on behalf of their clients;

(c) ordering the liquidation or transfer of open positions;

(d) suspending or curtailing trading on the market (e.g., trading halts and circuit breakers);

(e) altering the delivery terms or conditions;

(f) cancelling trades;

(g) requiring owners of positions to specify delivery intentions; and

(h) requiring traders to disclose related OTC derivatives or large physical market positions.

\(^{410}\) See Principles for the Regulation and Supervision of Commodity Derivatives Markets, supra, p. 41.
The dynamic nature of markets requires market authorities to assess whether their existing policies are adequate to address changing market structures, trading technologies and practices. Market authorities should therefore review their existing powers in light of changing market conditions and, if necessary, seek additional powers as appropriate.

**Transactions in OTC Derivatives Markets**

Regulators may consider implementing organized platform trading mandates through a two-step, phased-in process, which would allow regulators to observe the market’s reaction to mandatory trading requirements and to adjust implementation of future phases accordingly. The first step of this phased-in approach would focus on OTC derivatives products with some minimum proportion of their overall trading presently taking place on organized platforms. Taking into account market dynamics, regulators then could mandate that a portion of such derivatives products be traded in a certain proportion or exclusively on organized platforms by a specified date.

In the second step of the approach, regulators would establish a set of publicly disclosed criteria and then mandate that a derivatives product or class of products, once satisfying such criteria, trade in a certain proportion or exclusively on organized platforms (e.g., impose a requirement that once a derivatives product is accepted for central clearing, all future transactions in that derivatives product or class of products must be traded on organized platforms where organized platforms exist to accept such trades). In establishing specific criteria for requiring trading on organized platforms, regulators should be aware that market participants may attempt to evade required trading by seeking to design activities that fall short of published standards.

Standardized derivatives trading can be undertaken on trading platforms that take multiple forms and exhibit a range of characteristics, but that have certain common elements, including access provisions, transparency requirements, trading rules, operational efficiency, resiliency, structural arrangements, and market surveillance capacities. Market regulators may specify the types of trading platforms that are most appropriate for mandatory derivatives trading in their jurisdiction, taking into account the direct relationship between a platform’s level of structure and the liquidity of the derivatives product that is appropriate for trading on such a platform. At a minimum, the platform should satisfy the following characteristics:

- Registration of the platform with a competent regulatory authority, including requirements relating to financial resources and operational capability;
- Access for participants based on objective and fair criteria that are applied in an impartial, non-discriminatory manner;
- Pre- and post-trade transparency arrangements which are appropriate to the nature and liquidity of the product and the functionalities offered by the platform;
- Operational efficiency and resilience including appropriate linkages to post-trade infrastructure and measures to handle potential disruption to the platform;
- Active market surveillance capabilities, including audit trail capability;
- Transparent rules governing the operation of the platform; and
- Rules that do not permit a platform operator to discriminate between comparable platform participants in relation to the interaction of buying and selling interests within the system, whether fully electronic or hybrid.
PRINCIPLES RELATING TO SECONDARY AND OTHER MARKETS

The following additional characteristic may also be considered:

- The opportunity for platform participants to seek liquidity and trade with multiple liquidity providers within a centralized system.

There are two general approaches to the determination that a product or set of products should be subject to a mandatory clearing obligation:

- The bottom-up approach considers products that a CCP proposes to, or is authorized to, clear; and
- The top-down approach considers products that should be assessed for a mandatory clearing obligation, but where there may be no CCP clearing, or seeking to clear, that product.

Authorities implementing a mandatory clearing regime should clearly set out the criteria against which mandatory clearing obligations will be assessed in its jurisdiction.

Moreover, in assessing a mandatory clearing obligation, a determining authority should consider information from a range of sources, including TRs.

A determining authority should consult with stakeholders as part of its decision-making process as part of a top-down approach and through a public consultation in the case of a bottom-up approach. A determining authority should seek to narrowly define exemptions and limit their number, as appropriate. A determining authority should clearly communicate the terms of any exemptions from mandatory clearing obligations, whether permanent or temporary, for both product and participant level exemptions.

Authorities should closely cooperate to identify overlaps, conflicts and gaps between regimes with respect to cross-border application of the clearing obligation. Authorities should coordinate their approaches via multilateral or bilateral channels to reduce such issues, to the extent possible.

TRs are entities that maintain a centralized electronic record (database) of OTC derivatives transaction data. By centralizing the collection, storage and dissemination of data, TRs can play an important role in providing information that supports risk reduction, operational efficiency and cost savings for both individual entities and the market as a whole. Reporting of OTC derivatives data to a TR enables authorities to ascertain accurate information concerning an OTC derivatives contract shortly after it is entered into, as well as information concerning any changes to the contract throughout its existence. In addition, given their centralized role, TRs are able to provide information on OTC derivatives markets that could serve to: (i) promote financial stability; (ii) assist in the detection and prevention of market abuse; and (iii) enhance the transparency of information to relevant authorities and the public.

Risk mitigation techniques for non-centrally cleared OTC derivatives have the benefit of: a) promoting legal certainty and facilitating timely dispute resolution; b) facilitating the management of counterparty credit and other risks; and c) increasing the overall financial stability.
The market for non-centrally cleared OTC derivatives is global in scope. Key market participants in the derivatives markets frequently deal with counterparties on a cross-border basis. Given the global nature of the market, the effectiveness of the risk mitigation requirements could be undermined, if inconsistent requirements are adopted. The different regulatory regimes should interact to minimize inconsistencies in risk-mitigation requirements for non-centrally cleared OTC derivatives across jurisdictions.

**Benchmarks**

*Fully Implemented*

Requires affirmative responses to all applicable Questions taking into account that the combination of mechanisms enumerated in Question 5 available in the jurisdiction are sufficient to reduce the impact of any failure and in particular to isolate risk to the failing institution.⁴¹¹

*Broadly Implemented*

Requires affirmative responses to all applicable Questions subject to an evaluation of the mechanisms in Question 5, except to Questions 1(a), 1(b), 1(c), 2(b), 4(a), and 6, provided that other measures are in place to address cross-market risks,⁴¹² and 12 and 19, and only minor deficiencies in Question 7(c) or 7(d).

*Partly Implemented*

Requires affirmative responses to all applicable Questions except to Questions 1(a), 1(b), 1(c), 2(b), 4(a), 6 and 7(a) and 7(b), and 10, 12, 14, 15, 17, 18 and 19.

*Not Implemented*

Inability to respond affirmatively to one or more of Questions 1(d), 2(a) if applicable, 4(b), 4(c), 5, or 7(a) and 7(b), and 8, 9, 11, 13 if applicable and 16, or bankruptcy or other relevant national law is uncertain or does not support isolation of risk to the failing firm and effective management of a disruption.

---

⁴¹¹ The responses to market disruption should seek to facilitate stability domestically and globally through cooperation and information sharing.

⁴¹² Exception reporting based on a surveillance program is consistent with the monitoring contemplated by Key Question 1(a).

J. PRINCIPLE RELATING TO CLEARING AND SETTLEMENT

| Principle 38 | Securities settlement systems, central securities depositories, trade repositories and central counterparties should be subject to regulatory and supervisory requirements that are designed to ensure that they are fair, effective and efficient and that they reduce systemic risk. |

Because of the potential for disruptions to securities and derivatives markets and to payment and settlement systems, both domestic and non-domestic, securities settlement systems (SSSs) central counterparties (CCPs), central securities depositories (CSDs) and trade repositories (TRs) should be subject to effective regulation and oversight to ensure that they are fair, effective, and efficient, and that they reduce systemic risk. Regulators should be prepared to cooperate with each other and other relevant authorities, including central banks and resolution authorities, both domestically and internationally, to address potential domestic and cross-border risks.

In particular, in April 2012, the then Committee on Payments and Settlement Systems (CPSS) (and currently the Committee on Payments and Market Infrastructures (CPMI)) and the Technical Committee of the International Organization of Securities Commissions (IOSCO) published the standards report Principles for Financial Market Infrastructures (PFMI). The new standards largely replace the three existing sets of international standards set out in the Core Principles for Systemically Important Payment Systems (CPSS, 2001); the Recommendations for Securities Settlement Systems (CPSS-IOSCO, 2001); and the Recommendations for Central Counterparties (CPSS-IOSCO, 2004). CPMI and IOSCO have strengthened and harmonized these three sets of standards by raising minimum requirements, providing more detailed guidance and broadening the scope of the standards to cover new risk-management areas and new types of financial market infrastructures (FMIs). The PFMI also incorporate additional detailed guidance for CCPs and TRs handling over-the-counter (OTC) derivatives.

In general, these new standards are expressed as broad principles in recognition of FMIs’ differing organizations, functions and designs and the range of ways potentially available to achieve a particular result. In some cases, however, the PFMI do incorporate a specific quantitative minimum (such as in the credit, liquidity and general business risk principles) to promote a common base level of risk management across FMIs and countries. In addition to the new principles themselves, the PFMI also outline the general responsibilities of relevant authorities for FMIs in implementing these standards. In the context of assessing a regulator, it is these responsibilities that are applicable.

Accompanying the PFMI Report, CPMI and IOSCO have also published *Principles for Financial Market Infrastructures: Disclosure Framework and Assessment Methodology*.

The disclosure framework and the assessment methodology are intended to promote consistent disclosures of information by FMIs and consistent assessments by international financial institutions and national authorities.

Appendix 1 — The Legal Framework

Effective securities regulation depends upon an appropriate legal framework. The matters to be addressed in the domestic laws of a jurisdiction include:

1 Company Law
   1.1 company formation
   1.2 duties of directors and officers
   1.3 regulation of takeover bids and other transactions intended to effect a change in control
   1.4 laws governing the issue and offer for sale of securities
   1.5 disclosure of information to security holders to enable informed voting decisions
   1.6 disclosure of material shareholdings

2 Commercial Code / Contract Law
   2.1 private right of contract
   2.2 facilitation of securities lending and hypothecation
   2.3 property rights, including rights attaching to securities, and the rules governing the transfer of those rights

3 Taxation Laws
   3.1 clarity and consistency, including, but not limited to, the treatment of investments and investment products

4 Bankruptcy and Insolvency Laws
   4.1 rights of security holders on winding up
   4.2 rights of clients on insolvency of intermediary
   4.3 netting

5 Competition Law
   5.1 prevention of anti-competitive practices
   5.2 prevention of unfair barriers to entry
   5.3 prevention of abuse of a market dominant position

6 Banking Law

7 Dispute Resolution System
   7.1 a fair and efficient judicial system (including the alternative of arbitration or other alternative dispute resolution mechanisms)
   7.2 enforceability of court orders and arbitration awards, including foreign orders and awards
